The new Panasonic KX-P1123. For when you need to create the best impression.

When quality matters, move up to Panasonic's 24-pin high performance dot matrix printer, the KX-P1123. With four Letter Quality fonts, document presentation is crisp, clear and black – simply stunning!

What's more, with a brisk speed of 63 cps, or up to 240 cps in draft mode, this is a professional printer with a huge appetite for work.

Outstanding value for money, the KX-P1123, with easy-to-use front panel controls, features a

generous 10K buffer and full software and interface compatibility. Paper handling, with push/pull tractors and rear, top and bottom paper paths, is exceptionally versatile.

For more information, dial 100 and ask for Freefone Panasonic or fax Julie Everard on (0344) 853707. Remember, you never get a second chance to make a first impression.

A Panasonic Printer. A Computer's Perfect Partner.

PIPEDREAM

WINNER
of the 1989/90
BBC Acorn User
Award for Best
32-bit Business
Software

The bar chart in the screen shown above was produced by using the HotLink between PipeDream 3 and HotLink Presenter.

Major features include:

- intuitive RISC OS user interface
- many documents loaded at once
- display and printing of pictures within text
- wysiwyg display including all RISC OS fonts
- built-in 93,003 word spelling checker
- file compatibility with PC & Z88 PipeDream & BBC View Professional
- natural, background recalculation
- keystroke compatibility with Z88 & PC PipeDream
- Z88 filing system
- automatic loading of VIEW, ViewSheet, Lotus, First Word Plus, Tab and CSV files
- automatic saving of VIEW, Lotus, Tab, CSV and Acorn DTP format files
- multi-field sorting
- 62 spreadsheet and database functions
- external references between documents for 3-D modelling
- macro file recorder
- slot protection

colton
software

PipeDream 3 breaks down the barriers between word processor, spreadsheet and database. With PipeDream 3, you can include numerical tables in your letters and reports, add paragraphs to your spreadsheets, and perform calculations within your databases.

PipeDream 3 has been written to take full advantage of RISC OS – if you can use RISC OS, you can use PipeDream 3. It is fully multi-tasking and multi-windowing, so you can work on many documents at once and instantly move information between them. PipeDream 3 can automatically load and save most popular file formats and is the first program to use the new RISC OS HotLink, which enables it to interact dynamically with Archimedes graphics programs, such as *HotLink Presenter* from Lingenuity and *GraphBox* from Minerva.

As well as winning the 1989/90 BBC Acorn User Award for Best 32-bit Business Software, PipeDream 3 was runner-up in the Best 32-bit Educational Software and Best 32-bit DTP/Word Processor categories.

PipeDream 3

Breaking down the barriers

POWER • SPEED • FLEXIBILITY • EASE OF USE

PipeDream 3 is for all Archimedes computers with 1Mbyte or more of RAM, including the A3000.

For a free brochure, see your Archimedes dealer, or phone us on 0954 211472, or return the coupon.

PipeDream 3 costs £147.00 + VAT.

KEY PLUS

... the new database management system
for the Arc' ... plus ... plus ... plus ... plus ... plus

By combining the most powerful hardware and some of the most successful software on the market, the result is a striking new relational database system – KEY PLUS. KEY PLUS harnesses both the power of the Archimedes and the abilities of KEY whilst providing much more. KEY PLUS offers stunning graphics, foreign language operation, interactive videodisc control, access to an extensive range of datafiles and the memory capacity and speed associated with the Archimedes.

Over 30,000 copies of the *ITV Schools* data management package – KEY – have enabled schools to master the techniques of data handling and management. KEY provides uncomplicated data-access routines (avoiding the need to learn a variety of interrogation routines), mapping and graphic facilities and a wide range of datafiles dealing with subjects across the curriculum.

Now, with the introduction of KEY PLUS, Archimedes users can also share in the success of KEY and be part of a dynamic development plan that will include a powerful knowledge-handling system (KEY AUTHOR) and a mapping system that will fully integrate with KEY PLUS.

☒ KEY PLUS provides a consistent approach to data-handling and uses KEY's familiar menu-structure, but a whole new level is accessible under RISC-OS. KEY PLUS also uses the existing wide range of KEY datafiles.

☒ KEY PLUS can handle up to 64,000 records with maximum flexibility and provides routines to create and amend files. Whole files can be searched or sorted in less than a second.

☒ KEY PLUS includes a wide range of statistical facilities and graphs, including line graphs, user designed scale and multiple display facility.

☒ KEY PLUS will operate in a range of languages including English, Welsh, French, German and Spanish. These are supplied free, with the program.

☒ KEY PLUS offers powerful control facilities for interactive video.

☐ Please send me further information regarding KEY PLUS

The Complete Upgrade Solution

A3000

- Uses only eight RAM devices
 - User upgradeable from 1 to 4 Mb
 - Four layer printed circuit board
 - Low power consumption
 - Available without RAM devices
- Bare card - £46 2nd Mb - £79 4th Mb - £275**

VIDC

- Increases resolution with all Multiscan monitors
 - Doubles desktop work area
 - Custom modes for Taxan and Eizo monitors
 - Suitable for all Archimedes computers
 - RISC OS mode generator available separately
- Atomwide VIDC Enhancer - £35**

A310

- Includes MEMC1a upgrade
 - Upgradeable from 2nd to 4th Mb
 - Large capacity OS ROM sockets
 - No soldering required
 - Four layer printed circuit boards
 - Courier collection of your machine
- 2nd Mb - £340 4th Mb - £520 2 to 4 Mb £207**

ARM3

- New series Aleph One ARM3
 - 3 to 4 times performance increase
 - Surface mount technology
 - Four layer printed circuit board
 - Courier collection of your machine
- ARM 3 upgrade - £495**

8Mb

- Uses only eight RAM devices
 - Suitable for A440, A400/1 & R140
 - Fully RISC OS compatible
 - Four layer printed circuit boards
 - Courier collection of your machine
- 8 Mb upgrade - £860**

- All products are cross-compatible

RISC User

The most popular subscription magazine devoted solely to the Archimedes range of computers and the A3000.

RISC User offers 10 magazines a year which typically contain:

- News on the world of Archimedes
- Reviews of the latest products
- Ready to run applications
- Utilities, routines and advanced programming techniques
- Programs and articles on sound and graphics
- Series of articles for all spheres of interest:
 - 'Into the Arc' — tutorial series for beginners
 - 'Mastering the Wimp' — series on Wimp programming
 - 'Under the Lid' — hardware series
 - 'Assembler Workshop' — all about ARM Assembler
 - 'Beginning 'C' — series on C language
 - 'DTP/WP' — tips on using commercially available packages
 - 'Arcade' — a round-up of the latest games for the Arc
- Hints and tips
- Postbag for your letters and answers to your questions
- Technical queries and expert answers

BEEBUG Magazine

The ONLY significant magazine still dedicated entirely to users of the BBC Model B and Master series.

BEEBUG offers 10 magazines a year, all packed with:

- A variety of programs to type in, or run from disc:
- Stand-alone applications
- Handy utilities and useful routines
- Entertaining games
- News from the BBC world
- Reviews of new products, and comparative surveys
- Series for all spheres of interest:
 - 'First Course' series for beginners
 - 'Workshop' for the more advanced programmer
 - '512 Forum' for users of the Master 512
 - 'Practical Assembler' for Assembly language programmers
 - 'BEEBUG Education'
- Informative articles:
 - Upgrading to an Archimedes, Writing a Compiler
 - Using the ROM Filing System, Bas128
 - Music Programming in Ample
- Hints and tips
- Postbag for your letters and answers to your questions and lots more

ART REVOLUTION

It's a *Revelation*! After two years' development, Longman Logotron's 'state of the art' package for the Archimedes has arrived.

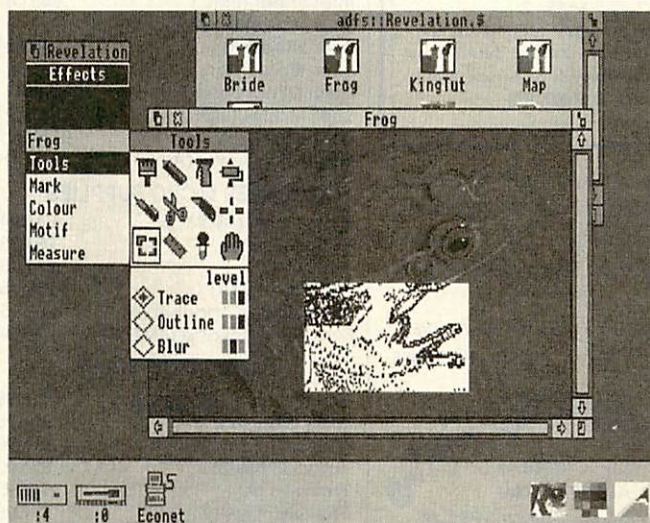

Designed to operate in any mode – including the forthcoming Risc OS 3 modes according to the press release! – the new package has a complete set of painting tools needed to create and edit bit-mapped images (sprites).

Art educators from over 80 UK schools, as well as over a dozen visual communication professionals, have been involved in the design and trials of *Revelation*. In some trials, high resolution images as large as 12Mb each were produced on the new Archimedes A540.

However, Longman Logotron is anxious to point out that the package has been designed for use on a basic (1Mb) machine. Obviously, when producing images with 256 colours, the more memory *Revelation* has to work with, the better.

Using the package you can:

- Carry out multiple image editing in Risc OS
- Use special tear-off sticky menus in easy mode
- Create a transparency mask and overlay pictures
- Cut and paste parts of one image into another and rotate, scale, bend, etc
- Introduce special effects, blend colours and washes
- Create 'motifs' from parts of an image and produce patterning and dithering effects

- Use slider controls to the colour and tint, to produce negatives and adjust colour strength and contrast
- Turn drawfiles into sprites for processing using the *Revelation Xtra* utility

Revelation is available now and costs £54 until March 31 1991 and £76 thereafter. For further details contact: Longman Logotron, Dales Brewery, Gwydir Street, Cambridge CB1 2LJ. Tel: (0223) 323656.

100,000 AND COUNTING...

Acorn has sold its 100,000th Risc-based machine and has released independent market research which indicates that the BBC A3000 is the biggest-selling computer in schools and the fourth most popular computer across all markets (see the Education column on page 15 for more details).

Research Machines remains Acorn's biggest competitor in the education market, while Commodore is said to have approached a software house with a view to producing an Archimedes emulator for the Amiga. Apple has also recently launched a new low cost Macintosh aimed at the education market and has formed Arm Ltd with Acorn to advance its chip design and manufacturing ability.

Acorn made a special presentation at the recent BETT '91 show to mark the 100,000th Archimedes computer sold.

A BBC A3000 system was presented to Jeff Bale and Rick Back from the special needs department of West Bridgford

School in Nottingham by Acorn managing director, Sam Wauchope (below, on far left).

For further information, contact Acorn Computers Ltd, Fulbourn Road, Cherry Hinton, Cambridge CB1 4JN. Tel: (0223) 245200.

READING THE RIGHT ACT

The Reading Writing Course from LCL could help motivate disinterested or special needs children to read and write.

Using animated graphics, a voice/music tape and accompanying books, the course – designed for the BBC B, Master and Compact – is aimed at improving concentration, to enable pupils to reach attainment targets 1 to 5.

The 24 programs are suitable for children of all ages from three years on and can be adapted by teachers to suit individual teaching methods. The course is priced at £24. For further information contact: LCL, Thames House, 73 Blandy Road, Henley-on-Thames, Oxon RG9 1QB. Tel: (0491) 579345.

ARC FIXES IT FOR JIM'S ROBOTIC CHAIR

Viewers of BBC TV's *Jim'll Fix It* may be intrigued by the new high-tech chair that host Jimmy Saville sits in. This flashy piece of robotic furniture is driven by nothing less than an Archimedes A440.

The idea of building a new chair for Jim came about during his recent visit to Reading University's department of cybernetics, where he was presented with an honorary fellowship in recognition of the work he does for disabled people.

Jim's old chair was thrown out by the BBC five years ago, and it was decided that a new high-tech chair should be created for the latest series.

The brief for the chair, from the BBC, was very open and some of the features suggested included a cigar box, a badge-holding arm, a tea-making machine and a TV monitor.

It soon became clear to John Walsh and his team at Reading University that a computer

would be needed inside the chair, with a good graphical display, possibilities for sound sampling and video digitising, and the ability to run control software for the robotic arm.

An Archimedes A440 was donated by Acorn, but extra items were needed. Clare's *Armadeus* sound sampling package provided such good quality that the BBC engineers apparently had to alter the output to make it sound mechanical.

Wild Vision's ADC1208 I/O board provided an eight-bit digital output port, used to control the air pistons through an interface, which can switch two 24-volt supplies and one mains supply to control the teasmade. The company supplied a colour video digitiser to relay an external TV picture to the Hitachi LCD screen on the chair.

The robot is controlled through the Arc's RS232 link. All the software was written in Basic (adapted to work in Risc

OS) and is multi-tasking for all the control functions.

Using the mouse, Jim can select from icons for a badge, a cup of tea, the draw section, a mystery item (used to bring up a video cassette) and a cigar.

Swift Upholstery designed (with the help of Reading), built

and upholstered the chair for around £2000. In fact, the company built two – one is a spare in case Jim fails to fix it!

For further details, contact: John Walsh, Department of Cybernetics, Reading University, Whiteknights, PO Box 220, Reading, Berks RG6 2AX.

IOTA AIMING TO BE NUMBER ONE

Iota is a new Cambridge-based company which 'plans to be Acorn's number one software house by the end of 1992'.

This ambitious claim is made by Iota's founder and marketing manager, Adrian Critchlow, who has recently left Acorn's consumer marketing department to set up the new company, which will be releasing *Junior Database* and *Touch Type* for the A3000/Arc this month.

Junior Database is a comprehensive, yet easy to use, database which can be used for all subjects in the National Curriculum. Apart from its ability to produce graphs from data, a unique 'hot linked' tutor is included to take users through the program, so there is no need to plough through a manual.

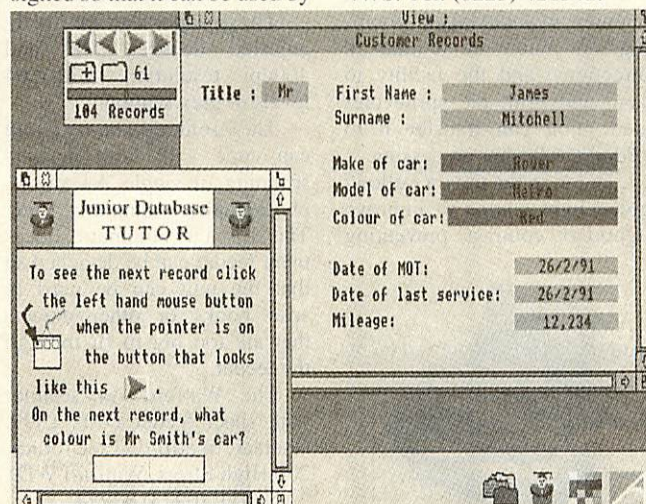

Touch Type is designed as a complete desktop typing tutor. It offers over 30 exercises, with instructions on how to use all your fingers, with screen guid-

ance to ensure you don't need to look down at the keyboard. A separate window gives details of typing speed, which fingers need more practice, and so on. Sound effects include a voice which calls out letters.

The program has been designed so that it can be used by

people with sight difficulties.

Junior Database costs £60.95 (£45.95 for educational establishments) and *Touch Type* costs £39.95. For further information, contact: Adrian Critchlow, Iota, St John's Innovation Centre, Cowley Road, Cambridge CB4 4WS. Tel: (0223) 421542.

TECHNOLOGY DATABASE

The *Technology Database* might prove useful for teachers planning lessons around the National Curriculum.

Developed by Loughborough In-Service Technology (LIST), it consists of two discs on Design and Technology and Information Technology. As many teachers have little computer experience, ease of use was vital – it is menu-driven with full printer support. There are versions for BBC B and Master computers, at £13.80, and £14.95 for the Archimedes.

LIST is also running an Inset initiative in IT for teachers covering all applications relevant to the Technology Orders.

More information from: The LIST Project, Department of Design and Technology, University of Technology, Loughborough, Leics LE11 3TU. Tel: (0509) 222661.

NEWS IN BRIEF

● The Starlight Foundation was formed to help make youngster's wishes come true. One young man – Victor, age 6 – who suffers from leukemia, has wished for a BBC B computer and printer to work on at home. If anyone would like to help him, contact Cheryl Nelson on 071-224 0506.

● A new Arc TV and video adaptor will give both UHF output for connection of a standard TV set, and composite video for direct connection of a video recorder. It allows a cheap upgrade from monochrome systems to colour. The adaptor costs £79 from: Vine Micros Ltd, 47-48 Hawley Square, Margate, Kent. Tel: (0843) 296237.

● Worried about the 'Extend' virus? If so, Hung Computer Services' Extend virus killer is available on its public domain software. *IVKiller* detects the virus and kills it. For further details contact Richard Cheung at Hung Computer Services Ltd, 82 Roe Lane, Kingsbury, London NW9 9BD. Tel: 081-206 2324.

● Cryptography is the creation of secret codes by which to pass confidential information. *The Public Key* is a new magazine which provides an Archimedes program for public key cryptography.

This will create the 'public' and 'private' keys necessary for safe message transmission. Copies of the magazine and disc cost £1 from: *The Public Key*, Waterfall, Uvedale Road, Oxted, Surrey RH8 0EW. Tel: (0883) 712440.

● Don't miss the Cambridge International Software Spring Fair. It's on March 7-10 at 8 Herbrand Street (nr Russell Square tube), London WC1. Tel: CIS on 071-833 4023.

NEW DIGITISER

Digithurst Ltd has released a new colour video image digitiser, the MicroEye 1A, for the BBC A3000 and Archimedes.

The package includes utility software that runs on the desktop, allowing transfer of images to memory, disc, or to other Archimedes applications.

The image may be scaled and cropped as needed and there are controls for saturation, contrast and brightness of the image.

The unit captures colour images into the Archimedes' Ram at 640 × 256 pixel resolution, with 24 bits of colour information per pixel. The full data is available to image processing applications, but in sprite form the images are reduced to 12 bits per pixel, giving an effective palette of 4096 colours. In this form, images are easily transferred to other Arc sprite-editing applications, such as *!Paint*.

Software supplied with MicroEye 1A includes a

library of Risc OS SWI routines which allow you to incorporate MicroEye's image capture into your own programs and applications.

Two versions of MicroEye 1A are available: for the Archimedes, a plug-in board with a back panel that carries an RGB/video connector; for the A3000, the board is supplied mounted in a separate external box which plugs into the expansion connector on the back of the machine. Either version needs a computer with at least 2Mb of Ram.

MicroEye 1A costs £569. Contact Digithurst Ltd, Newark Close, Royston, Herts SG8 5HL. Tel: (0763) 242955.

ARIES A4 SCANNER

Watford Electronics has just released an A4 scanner for the Archimedes and BBC A3000.

It's supplied with Rom-based podule software, and features include image zooming, inversion in X and Y directions, and the facility to save and print the sprite created. You can transfer it to *!Paint* for further processing.

The scanner uses a yellow/green light source to improve light/dark contrast, preventing

red colours from showing as white on the scanned image. You can also adjust the shading and brightness controls to get the best possible clarity.

The scanner can be freely adjusted between 100 and 400dpi resolution, with 64 levels of grey scaling.

The 216mm scanning width can cope with both desktop scanning of single A4 sheets, photographs, diagrams, etc. The 10-page automatic document feeder can be detached so that the unit can be used to scan books or other objects that are too big to fit through the feeder.

The Watford A4 scanner with sheet feeder costs £399. Contact Watford Electronics, 250 High Street, Watford WD1 2AN. Tel: (0923) 37774.

CREATIVE DESIGNS

Alpine Software has released a package designed to open up arcade game creation to a wider audience.

Called *Creator*, the new package is a fully Risc OS compliant multi-tasking application incorporating an object designer, screen designer, flight path designer and event manager for writing games.

In object designer mode, sprites are designed in *!Paint* or any other suitable package and loaded into the *Creator* sprite window. The path designer can be used to animate the sprites.

Screens of any complexity can be designed using the screen designer and each background sprite can be allocated to one of eight different layers.

The event manager is the key to controlling the game. As the game runs, a number of events are automatically generated. Typical events occur when two objects collide, when an object hits the edge of the screen, and so on.

Creator is expected to cost around £38. Details from: Alpine Software, PO Box 25, Portadown, Craigavon BT63 5UT. Tel: (0762) 342510.

WINDOW GAZING

A Sheffield teacher and his son have developed two programs to introduce Risc OS windows to children. Phil Porter's *Infant Windows* and *Junior Windows* help young users to become familiar with the mouse, moving objects around the screen and manoeuvring windows.

Even infants can compose pages of graphics and text and the packages support the National Curriculum. *Infant Windows* is priced at £15, with the *Junior* version at £20. They can be bought together for £30.

Contact: Porter's Primary Software, 138A Harvey Clough Road, Sheffield.

junior's database

...child's play in a grown up world!

Junior Database has been designed to meet the specific needs of the National Curriculum and is destined to become a class favourite with teachers as well as children of all ages.

Junior Database comes with an interactive Hotlinked Tutor (*the first of its kind*). There's no longer any need for a lengthy or offputting manual, Hotlinked Tutor is your onboard personal expert, on hand to advise, correct and guide you through the fascinating world of data, helping to create colourful graphs that will bring your facts and figures to life. One day all applications will be written this way...

RRP £53.00 (Education £39.95) excl. VAT

Available from: IOTA Ltd

The St John's Innovation Centre, Cowley Road, CAMBRIDGE, CB4 4WF.

ARCHIMEDES

A3000 PRODUCTS

Monitor stand (A3K1) Probably the best monitor plinth available for the A3000 & the basis of a modular system.

£24.95

System housing (A3K2) When you are ready to expand the A3000 this system housing is added, allowing upto 2 floppy drives and a hard drive to be added.

£69.50

Expansion card case (A3K3) If you are adding an expansion card ('module') to an A3000, such as a hard disc card, then you will need this module case to connect & protect the card.

£14.95

Disc buffer (A3K6) If an extra floppy drive/s is to be connected then you will require a disc buffer. This one supports upto 3 additional drives and incorporates software control for physical to logical drive mapping & 40/80 stepping which could prove essential when using discs in 65Host or PC emulator. A key feature is the built in expansion for further cards to be added internally; also see A3K12. *NB some cheaper products may only provide connection for an additional drive without buffering.*

£48.95

20mb hard disc (A3K7) A 20 mb hard disc drive ready to fit in A3K2, including the hard disc card and all cabling. We are not aware of any other hard disc upgrade that is treated as an internal upgrade (consult your Acorn dealer or call PRES for details)

£399

NEW 40 MB HARD DISC (A3K14) AS A3K7 BUT TWICE THE CAPACITY.

£499

3 1/2" additional floppy drive (A3K8) 3 1/2" disc drive & mounting brackets for A3K2.

£75

5 1/4" additional floppy drive (A3K9) 5 1/4" disc drive & mounting brackets for A3K2 - ideally suited for 65Host or using the PC emulator.

£99.95

65 Host 1770 DFS & DFS Filer (A3K12) A ROM & disc upgrade for A3K6 provides - 1) a desktop DFS filer that allows DFS filesto be dragged to ADFS viewers or straight into applications as Edit or Pipedream. 2) BBC 1770 DFS for use in 65Host. Automatic Icon and loader which can allow BBC DFS discs to have <SHIFT BREAK> operation. "...effectively turns your A3000 into a model B..." Acorn User Sept '90.

£19.95

Memory upgrades high quality memory expansions 1MB & 4 MB, multi-layer pcb, 100% Acorn compatible, from £68

As market leaders in SCSI drives for the Archimedes and A3000, Oak Solutions has earned an enviable reputation for quality and reliability.

The recent introduction of the Worra Winnie range has brought the price of our SCSI hard discs within the price range of users who previously would not have been able to consider adding a hard disc to their system.

Our bulk purchasing power allows us to bring you these drives at staggeringly low prices. And yet all drives are top quality units, manufactured and tested under a zero defect quality control regime to ensure the highest levels of quality and reliability and, of course, come with our 12 month 'no quibble' guarantee.

The drives fall into two distinct categories; internal drives for the 300 and 400 series Archimedes machines, and external drives for the A3000 series machines (and also for 300/400 series - please specify when ordering).

The drives are available in 20Mb, 45Mb, 80Mb, 100Mb and 200Mb sizes. All drives are high quality 3.5" devices manufactured by Seagate or Rodime.

Both internal and external drives have auto-parking heads, and access times of 40mS (24mS on the 80Mb drives, and 18mS on the 100Mb and 200Mb drives). All of the drives transfer data at between 600Kbytes per second and 1Mbyte per second, which is up to three times as fast as conventional ST506 hard discs.

The SCSI card gives great scope for future expansion, and can support a further three hard discs, as well as tape streamers, CDROMs and Magneto Optical drives.

Please specify type of computer when ordering.

| Internal Drives for 300/400 series | | External Drives for 300/400 series and A3000 | |

SILICON VISION

DESKTOP SOLUTIONS FOR THE ARCHIMEDES & BBC A3000

SOLIDCAD

The next generation multi-tasking CAD package combining 2D Draughting and 3D Modelling techniques with advanced smooth shading and lighting effects to provide the ultimate 3D Draughting System for Architectural design, Interior design, Engineering design and Teaching CDT. Allows drawing in plan, front & side elevations and also directly in 3D to visualise a model while it is being created. Powerful zoom, pan, sweep, extrude and macro facilities are also provided to enhance design productivity.

(RISC OS) **New**

ARC-PCB

The original PCB design package developed specifically for the Archimedes with a specification that cannot be matched by any PC-based system. Features include Automatic routing, Rats-nesting, Multiple-layers, Circular & Surface mount Pads, 0.001" resolution, 32"x32" maximum board size, On-line Help, Fast Zoom/Pan/Redraw, Text & Silkscreen facility, Variable Track/Pad/Text/Grid sizes, Hierarchical Part Libraries, Block Move/Copy/Rotate/Mirror/Erase options, Component Pulling, Clear pad holes, Drilling data, and up to 300,000 components. Also supports industry standard HP-GL, GRAPHTEC, PLOTMATE plotters and printers at their highest resolutions for high quality PCB artwork.

(RISC OS) **New**

SUPERDUMP

The ultimate printer driver which takes advantage of the highest resolution capability of ordinary Epson compatible 24-pin & 9-pin printers to provide 1920x1024 resolution. Fully compatible with SolidCAD, Realtime Solids Modeller, Gate Array Design packages & any other program capable of creating VDU plotfiles.

(RISC OS) **New**

FILM-MAKER

The package provides an interactive multi-tasking environment to create animated sequences of 3D scenes with dynamic camera motion for 'walk-throughs' and 'flight-paths' for objects within the scene. The fully graphical environment requires no programming or textual entry and the capability to calculate smooth shaded frames of complex scenes with lighting effects at very high speeds allows fast interactive design of animated sequences. Large numbers of these frames are then stored in a compressed format to play back at flicker-free rates for on-screen animation or video recording. Fully compatible with SolidCAD for design data & SolidsRENDER for ray tracing, animation Oscars are now within your reach.

(RISC OS) **New**

SOLIDTOOLS

The fully integrated environment for 3D CAD, Animation, Rendering & Hardcopy. The package includes SolidCAD, FILM-Maker, SolidsRENDER, Realtime Graphics Language, SuperDump & SuperPlot for a turnkey solution satisfying all your 3D Design and Presentation requirements.

(RISC OS) **New**

PRESENTATION SYSTEM

An interactive environment to create, edit and play-back computer controlled presentations for demonstrations and lectures. The contents of the presentation can range from textual to graphical displays consisting of lines, rectangles, triangles, circles, arcs, ellipses and sectors plus user definable graph plotting. Features include Subtitled and Pointers for hints, continuous playback mode, Back & Forward Paging facility and controlling external programs during presentations. Suitable for use on ordinary TV screens.

(RISC OS) **New**

SOLIDSRENDER

The most advanced Ray Tracing package for the Archimedes producing photo-realistic images of SolidCAD designs or FILM-Maker animations taking into account multiple light sources, reflections, shadows, transparencies, refractions and textures for the highest quality pictures from the leading 3D graphics experts renowned for technical excellence. The high-speed ray tracer uses sophisticated colour mixing techniques to provide the maximum range of colour shades plus anti-aliasing for smooth edges, motion blur effects, dynamic viewpoint, variable camera lens for wide angle and telephoto effects and multi-colour light sources driving the Archimedes display hardware to its limits for the best photo-realistic images within the laws of optical physics.

(RISC OS) **New**

RiscFORTH

A new 32-bit implementation of the FORTH-83 standard, designed to take full advantage of the ARM architecture. The language is ideal for process control applications including robotics, interfacing and realtime applications providing a comprehensive programming environment with built-in Editors, Assemblers, WIMP support and Standalone code generation.

(RISC OS) **New**

RiscBASIC

The best BASIC V compiler money can buy. Here's what the reviewers say:

"If you are looking for THE compiler to go for, and are confused about which one deserves to win the very public battle that has been raging in the advertisements, well my preference is for RiscBASIC"
- RISC USER August 1989.

"In summary, BASIC V is the best version of BASIC produced and RiscBASIC provides the most compatible, fastest compiler for this language."
- Archive June 1989.

"If you want the best, buy Silicon Vision's complete answer" - Micronet August 1989.
"This is an excellent product, well supported" - A&B Computing April 1990.

(RISC OS) **New**

EDUCATIONAL TECHNOLOGY AWARDS

For the second year running Sherston Software has hit gold in the primary category of the Educational Technology Awards. The Wiltshire-based company has won with *Connections* (Archimedes), a National Curriculum maths program which asks pupils to make mathematical links. *Teddy Bears' Picnic*, also from Sherston, was the top primary package last year.

The silver award went to Longman Logotron for *Archimedes Pendown* (Archimedes), its enhanced version of *Pendown*, the classic educational wordprocessor. The bronze was taken by *Find Spot* (Nimbus) from the Inner London Educational Computing Centre, a package based on the popular Spot, the dog, character.

Commendations went to Hybrid Technology's *Soundspace* (Beeb/Master), music software for young children, including those with special educational needs, and SPA's *Write On* (PC) wordprocessor.

In the secondary section, *Control By Design* (Master) was the undisputed winner. As well as being the panel's favourite, *Econometrics*' multi-dimensional design system, based around on-screen flow-charts, received more nominations than any other package.

Oak Solutions scooped the silver award for its much-more-than-just-a-database, *Genesis* (Archimedes). Bronze went to ESM's *Kaleidoscope* (Beeb/Master), a program bringing out the beauty of geometry.

Also commended were *Or-rery* (Archimedes), Spacetechn's computerised model of the solar system, reviewed in this issue, *Now Read On* (Nimbus), promoting foreign language learning and again from the Inner London Educational Computing Centre, and 4Mation's *Poster* (Archimedes) program for designing posters.

The Educational Technology Awards reward companies cre-

The Computer Basket, a successful Australian invention popular in schools Down Under, is now available in the UK. Built from lightweight but sturdy plastic-coated steel, it makes moving the classroom computer easy. Working in pairs, even quite young pupils can transport micros around the school and, as the computer stays in the basket permanently, they never have to lift the machine on its own. The Computer Basket can accommodate any desktop machine and trailing cables can be wound round its handles for safety. It is distributed by Rickett Educational Media, which also has an extensive educational software directory. The company can be contacted at Ilton, Ilminster, Somerset TA19 9HS.

ating innovative products for the educational market. Nominations came from teachers all over Britain and the winners were chosen by a panel of experienced educationalists.

Representatives of the winning companies received their awards from under-secretary of state for education, Michael Fallon, at the opening ceremony of BETT '91.

There will be a full round-up of news from the BETT show in next month's education page.

The Educational Technology Awards are sponsored by *BBC Educational Computing and Technology* magazine, the BEEA and Emap Exhibitions.

ACORN AHEAD

Acorn has announced that independent market research confirms the company as the major supplier of computers to UK schools.

Data from MaS shows that in the first eight months of this financial year, 53 percent of all computers shipped to schools

have been Acorn machines, with the Archimedes and A3000 outselling the Master 128 by a factor of two to one.

Chris Humphries, Acorn's education sales and marketing manager, pleased with the findings, commented: 'These figures once again confirm Acorn's continued lead in educational computing and round off an excellent year for Acorn.'

Meanwhile, Research Machines, Acorn's principal rival in the education sector, has also announced record results, with the statement: 'Growth through continued success in both schools and further and higher education has reaffirmed Research Machines as the UK's leading supplier of computer systems and support services to the education sector.'

The two companies obviously look at the market in a slightly different way, but it is interesting to note that they are both holding up in an increasingly tough market.

Lisa Hughes

NEWS IN BRIEF

● *Parents' Evening Appointment Package*, or *PEAP* for short, aims to meet demand for an easy means of organising appointment-based parents' evenings. The user enters the requirements of each parent and *PEAP* does the rest, from calculating appointment times to printing individual slips for parents and teachers.

Developed with a school in Leicestershire, *PEAP* costs £34.44, runs on the BBC B or Master and is available from: Grange Software, 88 Grange Road, Wigston, Leicester LE18 1JJ.

● *Over the Rainbow* is a self-development guide with an IT focus which aims to broaden the career expectations of girls by introducing them to potential types of work which they may not have thought about.

The pack consists of a workbook and audio tape with information, activities and self-assessment exercises which are illustrated by cartoons and other graphics. It costs £12.95 (discounts available for bulk orders) from: The Domino Consultancy, 56 Charnwood Road, Shepshed, Leicester LE12 9NP.

● A couple of dates for your exhibition calendar. The Education Show is new but has a full list of exhibitors and promises a 'complete overview' of educational products and services. It runs from March 7 to 9 at London's Olympia 2. Details from: Emap International Exhibitions, 12 Bedford Row, London WC1R 4DU.

The Educational Resources Exhibition is already established and has a similarly broad spectrum of companies. It runs from March 21 to 23 at the NEC in Birmingham. For further details write to: CRE, 2 Forge House, Summerleys Road, Princes Risborough, Buckinghamshire HP17 9DT.

If you haven't seen Longman Logotron's 1991 catalogue, chances are you aren't making the most use of your school's software budget. Consider these brand new programs for the Acorn Archimedes:

- **Pendown**, a word processor designed specifically for education, with a range of new features offering control as well as freedom.
- **Revelation**, a powerful image processing program which enhances classroom creativity across the curriculum.
- **Maggie**, a multi-media publishing program which enables children to draw on a wide range of sources to create flexible and exciting projects.

WHEN YOU'VE LISTENED TO US

Individually or in combination, these programs are accessible to 6 year olds, yet will challenge 16 year olds and open an expanding universe of learning in support of the National Curriculum.

If you want to know more, fill in the coupon below, and we'll send you our new 1991 catalogue plus free vouchers for up to £50 worth of Longman Logotron software.

YOU'LL HAVE THE LAST WORD

**LONGMAN
LOGOTRON**

SO YOU WANT TO BE A SYSOP?

A Sysop is computer speak for a SYStem OPERator – a person who runs their own bulletin board (BB). Over the past year or so, the number of Archimedes dedicated BBs have grown from two or three to virtually one in every county.

Setting up your own bulletin board used to be limited to the real computer enthusiast or comms expert.

Nowadays though, all you need is a computer, a modem, a telephone line and a minimum of comms knowledge.

Most people who have logged onto an Archie BB recently may have noticed a feeling of *deja-vu*, or at least some vague familiarity about many of the commands used.

This is because a high percentage of BBs now run on *ArcBBS*, a bulletin board Host system developed by Hugo Fiennes of The Serial Port, otherwise known as ALT-Man, and Sysop of the infamous World of Cryton bulletin board.

ArcBBS is an extensive multi-tasking program that allows you to run a bulletin board on your Archimedes with the minimum of problems, for either a single, or up to three separate phone lines.

So, assuming you want to become a Sysop, what do you need to acquire, and more importantly, how much is it all going to cost.

Firstly, you need a computer; an Archimedes is best, although you can (and a great many people do) run perfectly good bulletin boards (Equinox is one example) on a Beeb.

On the Beeb, you'll need a dedicated machine, as your bulletin board will cease to operate if you want to, say, have a quick bash at *Snapper*.

ArcBBS is multi-tasking, but of course not everything else on the Archie is – or indeed fast enough to run simultaneously with someone whizzing around your board.

So... you've found yourself a

spare computer to run your bulletin board on. Next you'll need a decent modem – the minimum requirement is an auto-answer facility. Most BB host software will also require Hayes commands to control it, although some can be customised to work with other modems.

The speed is up to you, but the faster it can run, the more people will be interested in using your system, and the less time each user will occupy your phone line – which again, is another expense.

A new phone line will cost around £150 to have installed. If, initially, you don't want the outlay of a new phone line, some BB software allows you to support what is known as 'Ringback'.

This is where you dial the number, allow it to ring a couple of times, and then drop the line and ring back, whereupon the computer at the other end of the line will answer.

Although this is a bit fiddly, it works well if you want to use your existing phone line.

To store all your files and user information you'll ideally need a hard disc, which again should be as big as possible.

A minimum would be 20Mb, although you can expand this as your BB – and wallet – grow.

ArcBBS is available now for £99.95 for a single-user version, or £159.95 for the three-line version.

To see an example of its comprehensive features, log onto one of the following bulletin boards – all of which use the *ArcBBS* system:

- Arcade: 081-654 2212
- Archive: (0603) 745932
- Noah BBS: (0272) 572322
- Darc World: (08675) 77724
- Atlantis: (0452) 330238

If you already run a bulletin board, then please send me details. You may get a plug in future columns.

TELECOM NUMBERS

There are now so many faxes and telephone numbers in use in the United Kingdom, that British Telecom could be in danger of running out of available numbers.

It has already made a proposal to OfTel, the Telecommunications Watchdog, to extend the number of digits in national codes.

'We are unable to comment now, although an announcement will be made in due course', a BT operator said, 'in any case, there would be at least two years notice before any such change occurred.'

Paul Vigay

NEWS IN BRIEF

● Three years after the launch of the Archimedes, Beebug is set to launch the first internal v22bis modem podule for the machine.

An internal modem has been promised for some time, but only recently has the technology become advanced enough to allow the price to be reasonably competitive.

Beebug's offering will offer all speeds up to and including v22bis (2400/2400 baud) and will be an auto-answer, auto-dial, fully Hayes-compatible piece of equipment.

Although the price is yet to be decided upon, I have heard rumours that it will be around the £200 mark, making this an even more desirable acquisition.

Keep reading this column for future information.

● Computer Concepts is still working on its long-awaited fax podule for the Archimedes.

Initial problems with Risc OS, together with difficulties obtaining the required fax controller chips halted production.

However, Computer Concepts is hoping the Fax podule will become a reality sometime this year.

● Two new bulletin boards have just been set up, both of them using The Serial Port's *ArcBBS* Host software.

Atlantis BB, based in Gloucester, supports all speeds up to v22bis, including MNP (level2), and includes numerous file and conference areas.

The second new bulletin board is located in Oxford. It is called DARC World and again it includes loads of downloads and conference areas.

I'd say both are well worth adding to your comms directory. Why not call them up and decide for yourself...

MORE RHAPSODY

Development of *Rhapsody*, the music notation/scorewriting program (reviewed in *BAU*, January 1990), continues and it has now reached version 1.12. Some minor bugs have been fixed and many extra facilities have been added. The main additions include:

- Variable stave heights have been introduced
- It can send Midi Program Change messages at the start of, and during, a piece
- The resolution of the sprites has been doubled, giving a much better printout
- The spacing of each stave can now be controlled

● Notes and symbols can be dragged from the control panel with the mouse and 'plonked' on the stave. This greatly speeds up note placement and is a welcome alternative to the cursor system (which is still retained)

There are around 20 other modifications, many relating to the handling of repeats.

Due to the number of changes made since the launch of *Rhapsody*, it looks as though the price will rise by about £10 (serves you all right for saying it was underpriced!), but existing owners will be able to upgrade for the price difference.

It looks likely that a *Rhapsody* file player will be developed for *Genesis 2*. More details are available from: Clares Micro Supplies, 98 Middlewich Road, Rudheath, Northwich, Cheshire CW9 7DA. Tel: (0606) 48511.

HAPPY BIRTHDAY

Amplinux, the user group for AMPLe INformation EXchange, has just celebrated its fourth birthday. As well as a selection of music written by members, each issue (which comes on disc and is written in Ample) contains hints, tips, utilities and programs for the Hybrid Music System (HMS).

Issue 19 includes an article on how to use the Music 5000

Rhapsody from Clares gets better and better... and more expensive

as a Midi expander(!) and an index to the last six issues of Amplinux – find out what you've missed.

If you have a Hybrid Music System and have not yet joined Amplinux, send £5 and a blank formatted disc with return packaging and postage to: Amplinux, 26 Arbor Lane, Winnersh, Berks, RG11 5JD. It's the essential Ample add-on!

SYMPHONY FOR HYBRID

Symphony is the latest music disc for the Hybrid Music System from the talented baton of John Bartlett. It's worth reviewing here because it's an excellent piece of programming, well up to John's usual standard, and is particularly recommended to anyone interested in interpreting classical music on the HMS.

It contains three selections from Beethoven's Pastoral Symphony, the first and third movements of Vivaldi's Violin Concerto, two Mozart excerpts and three movements of a concerto written by John especially for the HMS.

In the accompanying blurb, John apologises if the interpretations don't suit everyone. Why are HMS composers so humble?

The second reason for mentioning it is because John has

attempted to recreate an orchestra on the HMS and it's really not up to the job. There are some sounds – brass, for example – which it just cannot synthesise.

This is why, in my opinion, the HMS is more suited to original music or material which is capable of 'alternate' arrangements – I don't feel classical music makes the transition well.

If you disagree, write and tell me. This is not meant to be at all disparaging towards either the HMS or JB's music.

Also, John's concerto is written in a conventional way, which means it's hungry of memory and therefore fairly short.

Nothing wrong with that, but it would be interesting to write a piece of music which made use of the HMS's strengths and programming facilities – such as loops (and offsets), random factors and the ability to mix, match, stretch and shrink music lines, for example, to make a piece which lasts, 10, 15, 20 minutes or more. Now there's a challenge!

The cost of this masterpiece is £3.95 from: JB Software, 20 Crawley Avenue, Wellingborough, Northants NN8 3YH. Tel: (0933) 675392.

Ian Waugh

NEWS IN BRIEF

● Demo discs of *Tracker*, the sample-playback music program for the Archimedes, have been around for a while. Now a commercial version, which lets you create music as well as play it, has been released and made an appearance at the recent Computer Shopper Show.

Based on *Soundtracker* for the Amiga, *Tracker* can read Amiga and ST *Soundtracker* files but, running on the Arc, it has eight sound channels and many more powerful facilities. *Tracker* costs £49.95 from: The Serial Port, Burcott Manor, Wells, Somerset BA5 1NH. Tel: (0243) 531194.

● Hybrid Technology has launched 10 *Hybrid Music System* educational packages. Prices range from £99 for the Basic Primary System, which includes the Music 5000 and Universal software, to £729 for the Expanded Secondary System, which has the full range of Music modules, software, Midi Interface, Amplifier, speakers and leads. The systems can all be expanded.

For details, contact Hybrid Technology Ltd, 273 The Science Park, Cambridge CB4 4WE. Tel: (0223) 420360.

● The second Midi Music Show will take place on April 26-28 at the Novotel in West London. There were 65 exhibitors and over 5000 visitors at last year's show. This year more than 100 exhibitors are expected, with regular seminars and presentations. Contact Westminster Exhibitions on 081-549 3444.

● In the next Music column, details of free – almost! – music programs for the Arc!

If you have music news, tips or topics – particularly on the Archimedes – you'd like to see in this column, write to: Ian Waugh, BBC Acorn User, 20-26 Brunswick Place, London N1 6DJ.

A3 Post Code _____

An equation building tool that complements many RISC OS applications, in particular DTP and word processor programs such as Impression and Impression Junior

Many users of the Archimedes have a need to include complex mathematical formulae or equations into documents. Equasor allows equations to be built up on screen, graphically, from their component parts. Using the Acorn outline font system it presents a totally accurate view of the final equation at all times.

It simplifies the building of equations by presenting palettes of symbols, functions and operators which can be selected just by clicking with the mouse. It intelligently scales and re-sizes features such as summation symbols, brackets, and square roots as the equation is edited so they are always the right size.

Once the equation has been created it can be saved or exported as a Drawfile to any number of compatible RISC OS applications. In DTP packages it can be dropped into frames just like any other drawing where it can then be scaled and positioned as required.

When used in conjunction with Impression II, it can take advantage of the latter's embedded frame capability to embed equations into the text, even on the line. Once embedded in this way the equation will then flow with the text as part of the text.

Features:

Multi-tasking RISC OS application, can be run at the same time as other applications. Supports direct in-memory transfer of equations for the fastest, simplest integration with other RISC OS applications. Any number of equations can be handled at the same time. Equations can be viewed and edited at any scale. Saves equations as Drawfiles compatible with all applications that support this format. Supports multiple different RISC OS outline fonts and so is not limited to the Math/Greek font supplied.

- Supports region selection and cut, copy, paste between equations and documents.
- Styles for global control over fonts, size, spacing etc. of variables and operators. Effects give additional control over the appearance of individual parts of an equation.
- Small, compact program perfectly suitable for 1 Mbyte machines.

Included in package a 60 page spiral bound manual with detailed tutorial reference, and index. Discs include the program, example equations, and Math/Greek outline font.

£49.00+VAT (£56.35 incl.)

Software — for the — Archimedes

ShowPage

ShowPage is a PostScript compatible interpreter running under RISC OS.

Over the last 6 years PostScript has established itself as an industry standard graphics programming language. Pioneered by Adobe for use in the original Apple laser printers

it is now used in all manner of output devices such as colour printers, and typesetting machines.

ShowPage will be attractive to those wanting to learn and explore this programming language and those wanting to print and use PostScript files from other machines.

ShowPage is fully multi-tasking and RISC OS compatible. It can output any PostScript file either to a window on screen, or to the currently selected RISC OS printer. It can therefore be used to make even the lowest cost dot-matrix printer PostScript compatible. When used in conjunction with LaserDirect, it can turn this printer into a very fast and fully fledged PostScript compatible laser printer.

ShowPage supports the colour extensions and can create a sprite file of any required size. It can therefore be used to incorporate PostScript graphics into other RISC OS applications. It uses the RISC OS outline fonts, rather than the conventional PostScript fonts, for all rendering, so it is compatible with the wide range of Archimedes outline fonts now available for this computer.

ShowPage has a built in editor allowing PostScript programs to be created and executed directly, and interactively with the results shown on screen in another window.

Showpage is compatible with the output from Acorn PostScript printer drivers. Minimum recommended memory is 2Mbytes.

ShowPage can also be used with Laser-Direct to allow fast RISC OS printing over Econet.

PostScript is a trademark of Adobe Systems Inc

Illustrates example ShowPage program and resultant output

Package includes a spiral bound manual detailing the ShowPage version of the language. 320 page PostScript language reference manual by Adobe. 240 page PostScript language tutorial manual by Adobe. Discs containing ShowPage and example programs. AvantG, BookM, Pembroke RISC OS outline fonts.

Genesis II, the new release of Oak Solutions' market leading multi-media package, Genesis, is probably the most versatile piece of software ever written for the Archimedes. Genesis II is effectively an information manager, and the built-in script language allows powerful RISC OS multi-tasking applications to be written by those with only limited programming abilities.

Genesis II duplicates the features of the original, and adds many more. Advanced data compression techniques ensure that applications take up much less space on disc. New frame linking tools allow a wide range of events to trigger new pages to open including single mouse clicks, double clicks and even 'timer' events.

Multiple text styles and colours are now available within a single frame. Information may be left, right or fully justified, or centred, and can be printed out at DTP quality. The new 'Button' filetype greatly speeds the creation of new pages of information.

Genesis II is an ideal development tool for creating multi-media applications using CD ROM drives and Video Disc player technologies. It can be linked to sound samplers and video digitisers, and can be used in conjunction with a Genlock card for video titling.

With its enhanced interfacing capabilities, Genesis II can now be controlled by the Concept Keyboard to broaden its uses in the important fields of Primary and Special Needs.

For all multi-media applications on the Archimedes, Genesis II offers a fully functioned, versatile and easy to use system. Genesis I applications will run without modification.

To qualify for upgrades, please return your original Genesis 'Editor' disc to Oak Solutions at the address below.

Upgrade price £52.00 RRP

Genesis II £130.00 RRP

The Archimedes Information Management Tool

STUMPED!

I have recently purchased an A3000 Learning Curve for my children and while I regard myself as not being computer literate, I am becoming more and more hooked. I am also becoming very frustrated by my lack of knowledge.

I am learning very slowly but, every so often, I come up against a blank wall and the manuals and other literature do not seem to cater for people like me who have little or no background knowledge about computers.

One problem I am currently trying to solve involves running the programs on the monthly disc supplied with my BAU subscription.

By trial and error, I am able to load the programs dedicated to the Arc, but not the others. Am I right in saying that, if I use !65Host, I will be able to run them as well? If so, then how?

I appreciate this may be a basic question (no pun intended) but the answer is beyond me.

J Luke

Southampton

In the Acorn market there are two types of machine. The original eight-bit models such as the BBC model B, Master 128, Master Compact and Electron, and the more recent A3000 and Archimedes series which have 32-bit processing power. The monthly disc includes programs for both types of machine.

The reason why many eight-bit programs won't work on an Archimedes is the difference in the machine code – this is the code used by the computer to tell the central processing unit (CPU) what to do.

It is possible to run most of the eight-bit programs from the monthly disc on your machine with !65Host, the eight-bit BBC model B emulator. This emulator literally interprets the eight-

Yet more power behind the desktop

bit machine code into 32-bit machine code, one instruction at a time. A recent example of an eight-bit program that works under the emulator is the *HatTrix* game published in the January issue of BAU.

Run the emulator by double clicking on its icon. From now on, until you press the reset button, or type *QUIT, the A3000/Arc will act like a BBC micro, or as close as it can get. For instance *CAT (*. for short) will catalogue the disc. *DIR <directory name> will go into a directory, just the same as double clicking on a folder in the desktop.

CHAIN"<filename>" will load and run a program.

The A3000 also has its own Basic language which is far more powerful and faster than the BBC micro emulator.

Pressing function key 12 while in the desktop will enter command line mode (see section 3 of your User Guide about using the command line). Typing *BASIC will gain you access to Basic, type *DESKTOP to return to the desktop.

If you are interested in learning more about Basic on

the Archimedes then Dabs Press sell a book called *Basic V, a Dabhand Guide*.

Don't forget to keep reading the First Steps series in BAU for more advice and help on using the A3000 and Archimedes.

WORLDS APART

Just a short letter to congratulate the writers of *Twin World*. What a masterpiece! The game is a joy to play from start to finish. Each evening when I get home from work I load it up and try to improve on my final score of 55,950. The game is simply marvellous and is one one the best.

The authors of the game must be forced to write more for the Arc. If this is what the standard game is like on the Amiga, then where have the writers of Acorn games gone wrong?

Got to go – I have to save the world, again!

Neil Newman

Faringham

Twin World (reviewed in the February issue of BAU) is an exceptional game, even for the Amiga, and we agree, let's have more UBI Soft!

COMPACT GRAPHICS

My children use an A3000 at school and they enjoy using graphics programs like *Arcol* and *Proartisan*.

At home we have a Master Compact. Are there similar programs available for this machine?

M Collins

Worcester

The Compact will never be able to match the Archimedes in graphics power but there are many graphics packages around that will allow you to use the machine to the full. Recently published was the *Picpac* program over the three months beginning from October 1990. Watford Electronics also sells a package called *Quest Paint* which won the BBC Acorn User 1990 Award for the best art/graphics package. Take a close look through the adverts in BBC Acorn User, you are sure to find what you want.

MORE EIGHT BITS?

As a regular subscriber to BAU and a keen Beeb user, I am looking carefully at whether or not to renew my subscription.

I am concerned that your magazine is gradually moving away from us Beeb users and producing more for A3000 and Archimedes users.

I have read your magazine since 1985 and still believe it is the best on the market. Although I am keen to upgrade to 32-bit in the future, I cannot afford to do so yet – and anyway, I enjoy using my Beeb and will still hang onto it even when I do.

L Jackman

London

We obviously appreciate your loyal support and we will continue to cater for all eight-bit users. Our new series on some of the best Beeb programs we have run form part of our plans to ensure you are looked after. So keep on subscribing to BAU in the future!

Best value memory upgrades

**4Mb of RAM for your
A310 or A305 is now just
£399 incl. VAT**

**Price includes fitting, and a free MEMC1a
worth nearly £80 - limited offer.**

Hardware compatibility; This RAM expansion is fully compatible with ARM3 boards. Naturally, it also allows upgrades such as backplanes and hard discs to be fitted too.

Software compatibility; The 4Mb of memory is functionally identical to that in a 440/1. Your computer automatically detects and makes use of the extra RAM. A must for desktop publishing.

8Mb potential; The small size of the board even allows room for an 8Mb upgrade! Our information pack gives further details.

MEMC1a; This is an improved version of the memory controller, which boosts performance by about 10%. **While current stocks last, a MEMC1a (RRP £79.35) will be included free of charge with the 4MB RAM board.**

You can obtain a free information pack on this upgrade by ringing (0752) 847286, or write to the address below. Not only does this explain the installation procedure, but also covers the use of larger OS ROMs.

IFEL (Interface Electronics), 36 Upland Drive, Derriford, Plymouth PL6 6BD. (0752) 847286.

A3000 corner

2Mb (total), £69. May be upgraded to 4Mb later.

4Mb (total), £220.

Prices include VAT

Bare board, £29.

The bare board may be turned into a 2Mb or 4Mb expansion simply by plugging eight memory chips into the high quality sockets. A data sheet is available free of charge which explains the type of chips needed.

4-slot backplane for A310. Now widely recognised as *the* backplane for 300 series computers. Four-layer board gives superior reliability by reducing electrical noise. Also available from Beebug and Norwich Computer Services. Recommended by Oak Computers for use with their range of SCSI drives. Simple to fit, complete with fan and full instructions.

£66 incl. VAT.

**All products in this advertisement
are covered by our no-quibble money
back guarantee.**

Ordering details. All prices include VAT. Payment by Access, Visa or cheque. Official orders welcome.

QUESTIONS AND ANSWERS

Q I have an unexpanded model B and have just managed to purchase a secondhand 512 co-processor to use with it. I now realise the co-processor was developed for the BBC Master 128. Can it be adapted for use with the model B?

A Thompson
Yeovil

A You are rather lucky to have found a 512 board! Have no fear – you can use the 512 board with your Beeb. But it cannot be fitted internally, like in the Master 128.

You need to purchase an Acorn or Watford Electronics universal co-processor box which will cost about £35. The 512 board is installed inside the box and the box attached to the machine.

Q My BBC A3000, which I use with a Canon PW-1080A printer, will not work properly with *First Word Plus*. The text side of things seems to work

alright but, when it comes to graphics, there's trouble. Is my printer at fault, or could it be the software?

What can be done?

S Fregg
Rye

A I believe your problems are due to the use of the incorrect printer driver. You are probably using an Epson FX driver or another Epson driver supplied with this package.

Although the Canon PW-1080A is broadly Epson compatible, it is not totally, and that could be your problem when printing graphics.

I suggest you buy a Shareware disc of *First Word Plus* printer drivers from Norwich Computer Services, which advertises in BBC Acorn User.

The disc costs about £3.50 and contains lots of different drivers and, from memory, it does include one suitable for your printer. You should check this with Paul Beverley at NCS.

Q I have been very pleased with the *Hemera* desk diary program that was published some time ago in BAU. I have used it all year and it has been wonderful! However, I feel the good is coming to an end. I cannot seem to get the program to access dates beyond December 31 1990.

John Crump
Windsor

A The reason for your difficulties is the way the program is written. You need to create a new diary file using f5 from the options menu and, after you have input the Drive, Directory and the new file's name, you will be asked for the year that the diary file is for. With *Hemera* each diary file can only cope with a full year.

Can I warn you that, due to the length of the diary file, it is best to keep the main program and one diary file per disc.

Q I have an Archimedes 440 which I am using with Acorn DTP to produce an A5 leaflet.

It does not seem to allow me the control over the printed page that was promised as I cannot get the package to print two A5 pages side by side. What would you do to accomplish this?

Mr S Alacot
Ditchling

A You should use Page format and choose A5 paper (148.5mm x 210mm), landscape orientation. You will want different left and right pages, so leave a margin down

the middle of the inside spread equal to the outer margins.

Set the inside margin to be half of the outside margin when you set up the column guides and draw frames.

Q I have a BBC A3000 which I have used to play games and have been impressed! It's great! But I now want to start learning a bit of Basic myself.

I thought I would start by typing in an A3000 listing and try to begin to understand things as I type. I know I cannot program in Basic in the desktop, but how do I leave the Wimp behind?

Ted Cohen
Peckham

A The simplest way to leave the desktop is by pressing f12, which puts you in the command line mode.

Here you should type Basic at the star (*) and then press RETURN. You can now type in your Basic listing from the magazine.

Don't forget the line numbers and remember that, when typing the listing in, you have to put spaces exactly where the listing has them.

Q I've recently acquired an Epson TF-16 5.25in drive, which I wish to use with my BBC computer. At present I have two 3.5in disc drives attached. Will I have any problem adding a 5.25in drive to my system?

N Belham
Badsey

If you have a problem with an Acorn micro, commercial software or a program you are trying to write then *BBC Acorn User* can help. The Post A Problem service guarantees to give you a personal answer within 10 working days for just £4.

Write out your problem with as much detail as possible and, if a program is involved, include a disc or cassette. Fill in the coupon at the bottom of this page and send it and your problem along with a cheque or postal order for £4 (including VAT) made out to Redwood Publishing. If you want recorded delivery add on the cost of this.

Please note that debugging readers' own programs or those from other magazines is a complex task and we cannot guarantee to give a full solution. Unless the problem can be spotted quickly, the Post A Problem service will only be able to make general comments. The service will answer the problem and return all material received within 10 working days of receipt. If we fail to match this promise then your cheque or postal order will be returned – you can't lose!

Answered by:

A As your two existing drives are double-sided, you are already accessing the maximum number of drive surfaces that any BBC eight-bit machine can at one time.

You could hitch up the 5.25in drive by removing one of the 3.5in drives. The BBC uses standard connecting leads from the disc drive interface to the disc drive, whether you have 5.25 or 3.5in drives.

Q I have recently purchased a BBC A3000 with a colour monitor. Is possible to convert this colour monitor for use as an occasional TV.

R Billam
Rotherham

A You can use a TV tuner with certain makes of monitor so that it can be used as a TV. Certain Phillips monitors are normally suitable. However, some of the colour monitors supplied with the A3000 are not. Let's hope yours is okay.

I know that Watford Electronics markets TV tuners. I suggest you contact it to see if they will work with your version of the Acorn monitor. A tuner costs from £65 to £80.

Q In the office I use a PC with a Winchester hard disc, but I decided to treat myself to 32-bit technology at home, rather than have another dated 16-bit computer. Well, I'm impressed.

The BBC A3000 is wonderful, but I'm already anxious to upgrade my system to hard disc so that I can store and load programs quicker. A friend said I should go for a drive that connects to a SCSI Interface.

What kind of drive would you recommend as being suitable?

Bill Boneham
Shaftesbury

A You should be able to use any compatible SCSI hard drive with your BBC A3000. But don't forget that you have to first install the necessary Acorn or third party supplied SCSI interface suitable for the BBC A3000.

A range of SCSI drives is

available but costs vary. I suggest you check the cost of SCSI drives with various companies.

Q I'm considering buying a colour printer to use with my BBC model B. The printer must be compatible with an art package called *Image* that my daughters use at primary school.

I have seen some very reasonably priced Star colour printers – will one of these be alright?

R Dodds
Beaworthy

A If your children have been using *Image* at school, they probably obtained the printout with the Integrex Colour Inkjet printer. *Image*, which was developed by Cambridge University Press, is not compatible with the Star range of colour printers.

Image only has printout facilities for three colour inkjet printers – Integrex, Canon and Tandy, all of which are rather pricey – between £450 to £600.

However, there may be a solution. You may be able to dump the screen with a screen dump Rom. I know that *Snatch* from 4Mation supports Star LC-10 colour printers.

Q When I bought my BBC A3000 I did not buy a colour monitor as I thought that I would be able to connect up my Sony TV and obtain colour images on the screen. But I am having considerable difficulties with the connection of my television to the computer.

Alan Lewis
Cwmarn

A I'm afraid that you will only obtain monochrome output from the video output socket on the BBC A3000.

To receive colour output from the RGB socket, you have to have a colour monitor or television capable of accepting RGB input.

Unfortunately, I believe your television only receives an analogue signal.

But you should be able to use your Sony TV if you buy a PAL encoder and fit this between the TV and the A3000.

ACORN CUSTOMER HOTLINE

As recently revealed in BAU, a new fileserver has been released by Acorn. Developed in conjunction with Software (now Oak) Solutions, *Level 4 Fileserver* is a new software-based fileserver running on any Archimedes computer with at least 1Mb of memory and appropriate disc storage.

It can be run as a Risc OS desktop application, or in standalone mode, for maximum performance and security to provide users with file access and mail facilities.

The fileserver can transfer files from any standard media type, including Winchester or floppy disc, SCSI or ADFS, CD Rom (compact disc with CDFS), or use the Internet Protocols to communicate to a remote host via Econet or Ethernet and NFS. Activity monitoring is included to improve the quality of information that will be supplied as part of the fileserver is the *Broadcast Loader*. Classrooms provide a severe test of a network, when all pupils need to download the same application at the start of a lesson. They can cause network loading far in excess of the levels conceived of by the network

Compatible with existing Acorn fileservers, *Level 4 Fileserver* offers the advantages of Risc performance, flexibility and economy, letting the server double up as a user machine on lightly loaded networks and encouraging the sharing of data between work groups.

Also in this product is an advanced printer spooler which can support multiple printers and Risc OS management software, simplifying the task of setting up and day-to-day operation of the desktop environment.

Another important development that will be supplied as part of the fileserver is the *Broadcast Loader*. Classrooms provide a severe test of a network, when all pupils need to download the same application at the start of a lesson. They can cause network loading far in excess of the levels conceived of by the network

industry, and it often results in frustrating delays.

The *Broadcast Loader* program, designed by Digital Services Ltd, is an elegant software module and enables the broadcast of files that are required by several users. Independent of fileserver type, the module is loaded to all client users and utilises a new broadcast packet type to ensure that multiple requesters of a file are all loaded simultaneously.

Although BBC and Master 128 machines may not participate on broadcast transmissions, they can co-exist on the same network as the data-hungry Archimedes computers.

● There are now a number of 440, 440/1 and R140 owners who have fitted 8Mb memory expansion cards to their computers and now find that their PC emulators do not work.

Acorn has developed a patch for the PC emulator to enable it to work with machines with more than 4Mb of memory. This patch can be obtained from SID (Acorn's Support Information Database) or from any SID registered dealer.

The patch only makes the PC emulator work again and offers no advantages in speed or memory availability under PC emulation.

● In last month's hotline, new printer drivers available from SID were announced. Supplied with the new drivers is an application called *!SysMerge*.

This application is designed to make merging *!System* applications much more simple. Using the application is as simple as dragging your old and new *!System* application to *!SysMerge* dialogue box and the program will then do all the updating necessary.

● Next month's hotline column will include an announcement of important changes to SID. The new developments will make the system much more accessible to many users. SID is becoming increasingly important in allowing customers to gain new product information and updates to software.

• RHAPSODY IN BLUE •

by
adapted and performed by Julian (aged 7½ years)

Gershwin, Mozart, Vivaldi, all scribbling away, frantically composing their masterpieces, oh, to have had something a little more practical than pen and ink.

Imagine their delight had they seen Rhapsody. A new music notation package from Clares that allows you to write and modify musical scores in much the same way as a word processor allows you to manipulate text.

You can enter the music manually note by note. Or simply play the music in using a MIDI interface and a MIDI keyboard. Using a standard RISC OS printer Driver, pages, whole scores or individual parts can be printed out. What's more, Rhapsody also accepts Maestro files allowing Maestro scores to be played and printed.

As you would expect, Rhapsody enables you to enter dotted notes, triplets, staccato and accented notes, trills, repeats and much, much more. There is also the ability to add text, so you can easily add lyrics. And five

scores can be open at once allowing you to copy data between them.

All of this can be replayed via a MIDI or an Archimedes sound system, it's child's play, as successfully proved by Julian.

In short, it makes the labour of composing (noting, writing, correcting and changing) quick and easy, allowing you time to concentrate on the important part; the music.

Just think had Schubert had Rhapsody, perhaps his famous unfinished might have been finished. **PRICE - £49.95 (inc VAT).**

£15 BIO PIC

There's something of a fractal theme to this month's Risc Revue. If you thought the subject began and ended with the inventions of Monsieur Mandelbrot, we might have something new for you.

Here is an Arc version of one of the famous 'biomorph' functions, from **A Reysenbech**. The dictionary describes a biomorph as a representation of a living thing in decoration.

Like many fractal pictures, there is more than a hint of the natural world in it, which isn't surprising in that the picture, like many elements of nature, is built up from essentially simple rules.

For speed, the program is written in assembly language. Just enter it and run (ensuring you have at least 160K of screen memory available).

Like many functions of its kind, listing 1 uses complex numbers and an iterative process to produce the picture. The image is made up of 552 by 256 pixels and for each a 'real' and 'imaginary' part is found. The centre of the screen is taken as (0,0). The real part is the x distance from the centre, the imaginary part is the y distance. These values are manipulated and, depending on the results, the iterative process is repeated or the pixel is plotted.

Five values used within the program may be changed to provide different effects. The variables shift1 and shift2 represent scaling factors. Try changing these to 0 – you will see a close up of the 'jungle' in the centre of the design. Changing dec will affect the colours used.

A counter is maintained and decremented by dec each time the inner loop is executed. This counter is actually the colour plotted, so the different colours in the final design indicate that the iterative process was repeated different numbers of times for those points.

Altering const1 or const2 will affect the design in less predictable ways.

RISC REVUE

GALLOPING GASKETS

Many of you will have read with interest Mat Tizard's piece on Sierpinski's Gasket (*BAU*, October 1990) and subsequent follow-up pieces.

BAU regular **David Lawrence** was the first to supply me with a speedy Arm-code version of the routine and it forms listing 2 on the yellow pages.

For those who didn't see the original, the idea is simple. Take a triangle and pick a corner to start at. Then, choose another corner at random, move halfway to that corner and plot a point there, then repeat.

Somewhat surprisingly, the result is a beautiful recursive nest of triangles – surprising,

because the program itself doesn't appear to be recursive and it potters along in a rather random way.

Listing 2 is a direct implementation of the original algorithm, optimised where possible for maximum speed. You'll notice the gasket is plotted the other way up because it is more natural when poking the screen directly to treat the top left-hand corner as the origin. The random number is generated using the standard method given in the Programmer's Reference Manual (rather unexpectedly located in the Sound section).

One problem with plotting the gasket is knowing when to stop! Like all fractal images, it is of infinite detail, the only limitation

being the resolution of the screen.

There are various possibilities when it comes to choosing a stopping point. Listing 2, like Mat's original, plots a fixed number of points (250,000 in fact) and this is stored at .number%, so may be changed.

Listing 3 uses a different criterion when deciding to stop. A counter is maintained, starting at 0. Before each point is plotted the screen is examined to see if the pixel has already been set. If so, the counter is incremented; if not it is reset to zero. When the counter reaches a preset maximum (contained in the variable maxsame%) plotting stops. In this way the detail in which the gasket is shown relates more to the resolution of the screen.

With maxsame%=256, the time listing 3 takes to plot the gasket is typically 0.8sec on an Arm 2 machine (as opposed to 1.9sec for listing 2).

Reducing maxsame% to 16 greatly reduces the detail, but the time zooms down to about 0.1sec. (The function is random so times can only be averages!)

The next stage is animation and for this you must use a memory-efficient two colour mode, such as 0, rather than the extravagant mode 15 used by the earlier listings.

The plot routine used by listing 4 is slightly more complicated but straightforward enough.

A small block copy routine is used to save the pictures. These are copied directly from the screen to a DIMmed area of memory and back again at playback time.

Multiple load and store commands are used so the time to save or load a mode 0 screen is quite negligible.

The maximum number of frames that may be stored is calculated from the available memory and shown at the start.

Again, you may alter the value of maxsame% to change the detail and time taken. Press SPACE to reverse the direction of animation and single presses of + or - will alter the speed and allow you to look at what's going on in more detail.

It may seem a lot of trouble to go to in order to produce the finished result. Indeed, much the same effect can be produced recursively using a simple Basic procedure. One is given as an example and you'll find it as listing 5. Here the depth of recursion is the limiting factor.

However, Sierpinski's method has two distinct points in its favour. Firstly, the beauty of the idea is the randomness and non-recursive nature of the procedure. The most imaginative of programmers would find it hard at first sight to predict the picture produced.

Secondly, the way in which the gasket is plotted lends itself to smoother animation. Run listing 5 and you will notice a significant jump when an extra layer of detail appears.

PATH- OLOGY

Pathnames, aliases and system variables in general can be tricky items. They don't often behave as you might expect.

Most readers will be familiar with system variables. Type `*SHOW` for a complete list: some are strings, others have numeric values.

Some contain useful information (eg, `Sys$Time`), others reflect options chosen by the user (eg, `Copy$Options`) and yet more are used to deal with loading and running files of different types.

Variables are also used by the desktop applications to keep track of directories, system resources, fonts, and so on. System variables are usually created and deleted using star commands. These call SWIs "OS_SetVarVal" and "OS_ReadVarVal" which do the work.

To create a variable or change its value three commands are

provided: `*Set Fred` This is a string simply defining a variable – in this case as a string. The command: `*SetEval Fred 2+2` will define Fred as a numeric variable with value 4. It's like a `*SET` with a `*EVAL` combined.

Another command `*SetMacro` is used to prevent the definition given being evaluated immediately. If your variable name begins with `Alias$` then it has a special meaning. The command: `*Set Alias$Details Info |<%0>` creates an alias for the `*INFO` command, so `*DETAILS` has exactly the same effect. The `%0` means 'any following parameters', so: `*Details $.Library.*` is translated as: `*Info $.Library.*` and so works correctly. The `|` before the `<%0>` prevents immediate evaluation, rather like using `*SetMacro` as opposed to `*SET`.

As if this weren't complicated enough, the part of the operating system dealing with files makes special use of certain variables.

Typing `*SHOW` will reveal many variables of the form `Alias$@RunType_XXX` and `Alias$@LoadType_XXX`. These are used to ensure that running or loading a file has the correct effect. Applications make use of this facility.

For example, `!Paint` will alter `Alias$@RunType_FF9` so when a sprite file (type `&FF9`) is double-clicked, `!Paint` loads itself.

To top it all, there is one further extension of the alias idea that can be used in star commands.

This allows you to run programs on a different filing system from the currently selected one, or issue commands from a specific module. The original idea came from the Master OS.

If you are currently using DFS you could run a program Prog on an ADFS disc by typing: `*ADFS-Prog`. Although for compatibility this syntax is still supported, the preferred form is now: `*ADFS:Prog`. The name before the colon needn't be that of a filing system.

Most commonly, the path-name of a directory is stored in a variable with a name of the form `DirName$Path`. That directory can then be referred to using the

syntax `DirName;` in star commands or even in Basic.

The most important example is `System$Path` which is used to point to system resources (often the directory `$.!System`). A module can be loaded with the command:

`*RMLoad`

`System:Modules.ModName`

which is neater but identical to:

`*RMLoad <System$Path>`

`Modules.ModName`

You cannot type a command like: `*CAT System:` and expect to get a sensible result. The main reason for this is that path variables are not simple aliases. Indeed, they may contain a list of directory names – not just one.

The path variable `Run$Path` is used whenever you try to run a file. The current directory is searched and then the current library. You could define it with:

`*Set Run$Path ,%.,$.`

in which case the root directory would also be searched.

£15 ACID RAIN

This graphic demo is from Bryan Cloud of Gloucestershire.

Rather than describe the effect, it's easier just to type in listing 6 and run it. You'll need 160K or more of screen memory configured. The demo also works best if the outline font `NewHall.Bold` is available. If you have another font simply change the name in `font$`. If the program can't find the font given, it defaults to using a blown-up version of the standard 8x8 font, so all is not lost.

The main work is done by machine code of course. 'Acid drops' are created randomly in the top area of the screen and move down, leaving a trail. The trail is created by back-tracking along a drop's path. Sixteen shades from black to white are

used to create a convincing trail. As a drop moves down, the text message (which is plotted on another, hidden screen) 'burns' through. Exactly 320 drops appear – one for each pixel across the screen, so the message is always completely revealed.

OPTIONAL EXTRA

The Options submenu that can be brought up from the main Filer menu contains a meagre two items – Confirm and Verbose. New users might well suppose that these are the only two available.

However, when copying or wiping files, the user has much more control. Type `*Help Copy` or `*Help Wipe` and you will see a list of parameters that can follow these commands. All consist of a single letter. An example of what can be done is:

`*Copy adfs::4.$ ram:$ T F`

which will not copy any files at all but will duplicate the directory structure of ADFS disc 4 on the Ram disc. You can use these options in the desktop without having to resort to typing star commands.

The variable `Copy$Options` contains the default settings of the parameters that `*COPY` can take. Typically, these might be:

`A C ~D ~F ~L ~N ~P ~Q
~R ~S ~T V`

By typing the command:

`*Set Copy$Options A C ~D
~F ~L ~N ~P ~Q ~R ~S ~T ~V`

you disable the 'verbose' option and enable the 'newer' option, so only files with more recent timestamps are copied.

A similar variable `Wipe$Options` exists for `*WIPE` parameters. It can be useful to enable the `F` option in `Wipe$Options` since the occasional locked file can prevent you deleting a directory. If you do enable `F`, please be careful though!

technoSCAN II

**Probably the definitive
monochrome
scanning package!**

The all NEW technoSCAN II package provides full monochrome operation at 400 dpi as well as 8 and 16 level grey scale scanning and provides the following features:

Suitable for all Archimedes micros and integrates fully with the multitasking RISC OS environment.

Advanced memory management system releases memory when not required allowing scanning and DTP in a 1MB computer.

Flexible zoom control allows palettes to be imported, tailored and resaved with more powerful tone and tinting features than most painting packages.

Interactive help and a superb manual.

Direct printing with RISC OS drivers.

Saves sprites direct into PAINT and DTP or to disc.

Saves sections and palettes into any graphics mode.

At the same low price as the well tested original.

**technoSCAN II complete with
interface card and manual** **£149(b)**

technoSCAN II for A3000 **£175(b)**

**technoSCAN II upgrade
for technoSCAN** **£22.50(c)**

MULTIPOD PROFESSIONAL

The MultiPod is a single-width Podule for the Archimedes which incorporates five high-quality devices in one:

- Video digitiser
- Sound sampler
- Analogue/joystick port
- RS232 serial port
- BBC Rom Sockets

The software provided with MultiPod works in combination with the on-board Podule Manager to make an easy link with the familiar Risc Os Desktop environment. For most users this ought to provide sufficient control over the hardware features, but to accommodate advanced users several *Commands and SWI calls are supported. There are no Rom sockets in the A3000 version of the board.

MultiPod 300/400 series **£117(b)**

MultiPod for A3000 **£145(b)**

MultiPod RGB Filterset **£15(d)**

B&W CCTV camera plus lens **£200(b)**

**Special prices for
educational
establishments. Please
ring for details.**

technoSCSI Packages for Archimedes

The new technoSCSI interface card from Brainsware uses state of the art components to handle up to 4 SCSI drives with data transfer rates of up to 1.5 Mbytes/second (synchronous mode up to 2.8 Mbytes/second)

That is bytes ... not bits! MEMC1a bit required. Supports tape streamers, scanners and laser printers.

A300/400 technoSCSI

For A300 & A400 Archimedes a full 16 bit MEMC controller with tagged cache and both internal and external SCSI connectors **£179(b)**

A3000 technoSCSI card with USER PORT

Now for A3000, a new internal 8 bit technoSCSI card with on-board BBC compatible user port. **£179(b)**

SCSI DRIVES

An expanding range of internal and external SCSI drives with 24 ms, or better access times and fast data transfer rates.

All drives are supplied with cables and external drives are housed in stylish but robust metal cases.

technoCAD for Master 128

The best feature of technoCAD is not its
outstanding performance, not its unique
ability to allow creation of complex icons,
not the quality of output from printers or
plotters. The best feature is the
unprecedented ease with which it can be
mastered. With easy to use single key
commands limited to three keys, pull down
menus and a clear and concise, easy to
read manual, technoCAD is truly the
system any one can use.
technoCAD will meet the needs of most
professional applications and it is an ideal
tool for teaching CAD in technical schools,
CDT departments and colleges. **£50(c)**

NOVACAD Computer Aided Draughting System for BBC B

*Novacad can drive a plotter to produce
drawings of highest quality ... Novacad is
excellent. It is flexible, genuinely easy to
operate without much practice, and a
pleasure to use.* Beebug Dec 86
NOVACAD T/M Version **£39(d)**
NOVACAD T/M + Plotter DG **£49(c)**
Plotter Driver Generator **£12(d)**

EPROMRYTER

*Highly sophisticated & Advanced Programmer
*All current single rail eeproms handled
*State of the Art Programming Algorithms
The single rail eeproms handled by the EpromRyter are:
• 2716 2732 2764 27128 27256 27512 27513 27011
2516 2532 2564 (NMOS & CMOS)
• One time eeproms P27XXX, 87CXXX etc.
• Also A suffix eeproms such as 27XXXA
for Master & BBC **£89(b)**

GENEALOGY

(See review in Feb '87 and Aug. '89)

FAMILY HISTORY SYSTEM The most popular program ever written for us. Enables you to produce a full family tree and many other genealogical listings.
BBC/Master/Compact version £19.95 - Archimedes version £24.95

£19.95
£24.95

PAYROLL

EXTENDED PAYROLL Now in its eighth year. The only BBC program for wages, tax and National Insurance for up to 400 employees covering...
Four weekly and Monthly pay whether...
of data per employee in...
employees...
9th successful year
AUTOMATIC YEAR END RETURNS NOW INCLUDED
...pay from hourly...
...deductions, sick pay, SSP, SMP...
...just tax adjustments and even no pay. Three...
...two different types of payslip printout and an optional coin analysis. An annual contract keep you up to date with the budget changes. Send for demo disc

£68.95

BOOKKEEPING

(see review in March '89 Acorn User)

- CASHBOOK** Double entry bookkeeping for home or club use. All data kept in memory. Three character analysis code enables you to know where the money comes from and where it goes. 48 transactions per A4 page. Analysis summary up to 30 categories. £13.74
- CASHBOOK D** As 1) + random access giving 2000 items. CASH/BANK or VAT/BANK headings. Password control. String or numeric searches. For schools, clubs & non credit businesses. £22.94
- ACCOUNT** As 2) + Credit facility and statements. For small businesses working with credit. £34.44
- ACCOUNT-PLUS** As 3) + Invoicing, Orders, Quotations etc. Full sorting of data by 5 options. Automated statements, mailing labels. Multiple automatic nominal ledgers. For independent schools and VAT businesses who wish to cut the effort. £57.44
- TAXMAN** This new program which has been under development for three years allows you to enter all your transactions and to printout end of year results with balance sheet and even calculate tax due. The Inland Revenue love it and so do we. Results can be taken from our other accounting programs and entered into TAXMAN making a superb combination. £57.44
- Micro-Trader** is a full accountancy package with features right through to final balance sheet. Stock Control at £75.00 extra. For shops/firms, accountants wanting full accounting facilities. Payroll can be integrated £230.00
£86.25

MAILING

218 addresses in memory or up to 1875 on random access disc. Multiple selected and repeat labels, mail merge, full sorts. Ideal for subscription lists, promotions, any kind of mailing. £13.74
£34.44

Ask for detailed brochure for more software and other items.
Demo discs available for £2.50 each. Micro-Trader £25. Prices include VAT add 80p p/p

VAT UK customers please

add 15% to the total price, except for the zero-rated items which are marked '0'.

Carriage Free in mainland UK if you pay on ordering.

Overseas Add £6 (Europe) or £12 (elsewhere) for each software item, and pay by credit card or pounds sterling bank draft payable in England (add £10 + 1% of total price if you can only pay in your own currency).

Credit cards welcome. The name and address for delivery of goods must be as known to the credit card company. If you are leaving an order on our answering machine include your telephone number (home will do), the expiry date of your card, and your calculation of the total payment due.

Official orders are welcome. Payment is due in 14 days. Invoices are subject to carriage and late payment charges.

Site licences Please enquire if no price is shown.

All products, prices and specifications are offered in good faith and are subject to change without notice. Your order will receive our attention immediately, but suppliers sometimes keep us waiting. Goods are guaranteed but we do not supply them on approval.

In the News

DrawBender

DRAWBENDER will make Draw files follow a shape of your choice. A useful addition or cheap alternative to Poster, available with or without a set of three decorative fonts. The example above was made using DrawBender with FontFX.

We will send a £25 voucher to the purchaser who thinks of the best new name for it!

EQUASOR

This equation building application, with its own mathematical, Greek and other symbols, is now available from stock.

WORDPOWER

Still the best for the Electron, Master and BBC.

"I have yet to find a word-processor that gets close to it for usability and quality of output" said BEEBUG recently.

SCHEMA IN STOCK!

RISC User decided that this spreadsheet 'has to be the first, if not the only choice'.

We now have the full (very stylish) package in stock at £96, complete with manual.

SQUIRREL

You would be nuts not to order this new database from Digital Services at our special offer price of £109! Delivery is expected in January.

BASIC Editor and Toolkit

BBC, Master and Electron users will find BET makes the creation and editing of BASIC programs a real pleasure and encourages the development of a good programming style (Archimedes owners will envy its facilities). Full details on request.

CITIZEN SWIFT 24

For a limited period we are offering the colour version of this printer for only £279!

MISMATCH

A delightful new version of the Pelmanism memory game for all age groups. Excellent graphics and (controllable) sound. An ideal introduction to the Archimedes for five-

ULTIMUM – Archimedes A3000 Podule Racking System

THE ONLY LOGICAL WAY TO EXPAND YOUR A3000 COMPUTER

The accepted standard for Archimedes computer expansion is the Acorn Podule, designed initially to fit the old 310, and also for the later A400 and A400/1 series micros. The podules fit inside these computers up to four at a time. The A3000 is the little brother of the family, but can only have one podule at a time, plugging into the back of the computer.

Other attempts have been made to expand the A3000 by trying to introduce a 'mini-podule'. This is impractical for many reasons, amongst which is the reluctance of manufacturers to produce them. Nobody wants to re-design podules already produced. Some cannot be produced on a 'mini-podule' as they are far too complicated and simply wouldn't fit.

Watford Electronics listens to the demands and requirements of its customers, and we are glad to say that we have come up with the only real solution to the A3000 expansion problem. The ULTIMUM Podule Racking System allows up to three FULL SIZE standard Archimedes 300/400 series podules to be fitted to the computer. In addition, there is also provision for a hard disc drive and a podule to be fitted internally.

Since the ULTIMUM Podule Racking System takes proper full size podules, you will be able to use any of the currently available peripheral equipment, from companies like Computer Concepts, Armadillo, Acorn and of course, our own brand. Fitting the podules to 'ULTIMUM' is simple. They are neatly fitted inside the metal case of the rack, avoiding the previously untidy method of hanging the podule off the back of the computer, risking damage to both, it and to the computer.

'ULTIMUM' has its own power supply, so no strain is put on the A3000 power supply. There is also an IEC mains output socket for an Acorn type monitor so reducing the number of plugs required to go to the mains. The ULTIMUM is rigidly clamped over the top and under the computer, and allows direct access to the floppy disc drive and reset button, rather than obstructing access as on other systems. One can also place a standard monochrome or 14" colour monitor (even a multiscan type) safely on top. The mounting method employed is so firm that the computer could even be safely transported without the assembly falling apart.

Price: £125

By popular demand, we are now able to supply refurbished and fully guaranteed, Acorn range of Micros.
(Please telephone for price & availability)

Archimedes to BBC Serial Link Mk 2

Using this simple data link, it is possible to solve all your BBC to Archimedes data transfer problems. The kit is supplied with a disk, and the necessary cable to connect the two computers.
New RISC OS Version

Only £15

Archimedes 5.25"/3.5" Disc drive Interface

With this interface it is possible to connect almost any 5.25"/3.5" disc drive with its own power supply to the Archimedes. Up to 4 disc drives can be connected. Fully Buffered Board. NO SOLDERING is involved. Supplied complete with necessary lead.
Only £21

Special Education Prices

Archi A4 Scanner

This new A4 image scanner from Watford Electronics is supplied complete with ROM based podule software. Features provided include facilities for zooming in on an image and inverting the image in X and Y directions, saving and printing of the sprite created. Interactive help is supplied using the !HELP application on the Acorn applications discs.

The 216mm scanning width can cope with both desktop scanning of single sheets, photographs, diagrams, etc., with its fast ten page automatic document feeder, but it can also detach from the feeder to become a convenient hand-held full page scanner for larger documents or pictures.

Scanned image control can be freely adjusted in increments of 10 dots per inch from 100 up to 400 dpi resolution with 64 levels of grey scaling. A built in shading controller and manual brightness control achieve optimum image clarity.

Unlike some scanners, which use a red light source, the Watford scanner uses a yellow/green source which vastly improves the light/dark contrast, thus eliminating the effect where any red-based colours are faded down to white and so do not show up in the scanned image.

All these features and facilities combine to make the Archi Page Scanner the fast and convenient way in which to add that extra impact, interest and clarity to documents, reports, instruction sheets, manuals, news letters, etc., from your Archimedes DTP package.

Take the Acorn Archimedes Test Flight and win yourself a Supersonic Concorde Flight

Take the new Archimedes 420/1 Learning system home by booking a slot in Watford's Acorn approved Test Schedule. Call in at our showroom and check it out for yourself - Leave a deposit and you may borrow one of our specially chosen Learning Curve System for up to 14 days. Be satisfied before you buy. Return the system in good order for a complete refund. At the same time you may enter our FREE aviator competition. You could win stunning prizes; Fly in First Class Luxury in Concorde; Learn to fly a helicopter! Take a weekend of flying lessons; and many more prizes. So why not take a test fly at Watford.

For Archimedes Mk II Hand Scanner, Real Time Digitiser, Graphics Tablet, Software & Books, see pages 5, 8, 10 & 12 of our advert.

Universal Printer Sharers/Changer

Connect up to 5 Micros to 1 printer or 5 Printers to 1 Micro with our combined, Sharer/Changer. These Units are made to a very high standard. For extreme reliability, they all have Printed Circuit Boards mounted inside the case, (not a Spaghetti Junction of wires). Internal connection is made via high quality ribbon cables.

(Ideal for School environments)

Plinths for the BBC B & Master 128K Micros

Protect your computer from the heat of your VDU. Our micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and VDU, whilst the double height version provides enough room for our stacked disc drive and other peripherals like, Eprom programmer, music unit or simply discs & stationary. The computer slides neatly in the lower section allowing easy access to remove the lid. Colour: Matching BBC Beige.

| | | |
|----------------------|-------------------|-----|
| Single BBC Plinth | 420 x 310 x 105mm | £13 |
| Double BBC Plinth | 420 x 310 x 210mm | £24 |
| Single Master Plinth | 490 x 310 x 105mm | £14 |
| Double Master Plinth | 490 x 310 x 210mm | £26 |

(Carr. Single plinth £2; double plinth £3)

Perspex Printer Stand

Give your Computer System a touch of Class with our elegant, smoke finished Perspex Printer stand.

| | |

| Brown, Blue or Red | £9.95 each |

Professional Printer Stand

The professional printer stand takes hardly more space than your printer. Due to the positioning of the paper feed and re-fold compartments i.e. one above the other, the desk space required for your printer functions is effectively halved. Its ergonom-omic design ensures smooth paper flow and automatic refolding.

80 Column version £24 (carr. £3)
 132 Column version £29 (carr. £4)

Archimedes Real-Time Digitiser

Now supplied with NEW RISC OS Version Software

Watfords' Archimedes Video Digitiser is the most sophisticated digitiser ever designed for a micro. It provides a fast and flexible means of capturing images from a video camera or recorder for display and manipulation on the Archimedes range of Micros. Off-air television signals may also be digitised via a video recorder or TV tuner. Please write for further details.

Price £175

A Set of Colour Filters for colour image grabbing using a video camera **£16**
New Risc-OS Software Upgrade **£39**

Archi Graphic Tablet

The Archi Graphic Tablet offers performance and accuracy comparable to other tablets priced at well over £400, and has the useful addition of a liftable cover, which can hold tracing material or menu templates securely. The package is supplied complete with sophisticated Archi software. (Now, fully LinCAD compatible. Recommended by Linear Graphic).

(FREE this month, PC Mouse Drivers & Art package)
(Now, fully LinCAD compatible. Recommended by Linear Graphic).

Special Price £225

(Price includes Tablet, Leads, Software & Puck)
Stylus Optional Extra **£29**

Disc Plonker Rack

When using ones micro, there is a tendency to have more than one Disc on the desk. This exposes them to the hazards of fingerprints, scratches, dust, coffee and an untidy desk. Why not protect your valuable data from all these hazards with the help of our extremely handy and low cost DISC PLONKER RACK. Holds up to eight 5.25" discs.

Protection at Only: **£2**

Acorn & Watford DFS

- Watford sophisticated DFS ROM **£16.00**
- Watford DFS Kit complete **£69.00**
- We will exchange your existing ROM for Watford's ultimate DFS ROM at only **£12.00**
- DFS Manual (comprehensive) **£6.95**
- Acorn DNFS ROM **£17.00**
- Acorn ADFS ROM only **£25.00**
- Acorn 1772 DFS ROM Kit **£49.00**

(The single Density DFS system is now old technology. Like Acorn, Watford too have decided to replace it with the their more up-to-date 1770 DDFS interface. We have informed most of the software houses of this decision in order that they can ensure compatibility with our highly sophisticated and fully Acorn compatible DDFS).

Watford's MkII 1772

Single/Double Density DFS

Many of our customers have wanted to use our superior DDFS and Acorn ADFS together. Now our Mk II DDFS Board with its 1770 Disc Controller, has been adapted to allow the use of Acorn ADFS as well. It also has all the commands of the Acorn's 1770 DFS, plus the added features.

Added features include:

- Acorn ADFS compatible – Use ADFS on our DDFS board.
- Tube host Code – No longer any need to have the DNFS in your machine to use Co-Processors, even the CoPro and Master 512.
- Auto 40/80 Track sensing – no need to fuss with 40/80 track switches (even works with protected disks).
- An extremely powerful 8271 emulation – ensuring compatibility with almost all software.
- New low profile – small footprint board.
- Fits with all third party ROM boards.
- Option to double the speed of file handling operations – BPUT and BGET.
- Operates in both single and double density modes.
- OSGBPB has been recoded, increasing still further the speed of file handling.

Please note that not all DDFS's are capable of providing either the full 80% storage increase or of allowing a file the full size of the disk – Ours allows both of these!

If you already have a DDFS (any manufacturer), and wish to upgrade to our MkII version, then simply return your existing ROM and DDFS board and we will supply the new DDFS for only **£39.00**.

- SPECIAL PRICE **£44.00**
- DDFS Manual (No VAT) **£6.95**
- We will exchange your existing DFS Kit for our sophisticated DDFS for only **£30.00**

Please note, as the MkII DDFS is a hardware and software upgrade, it is not possible for existing Watford DDFS users to simply exchange the ROM for the new version.

Floppy Head Cleaner Kit

The heads in floppy drives are precision made and very sensitive to dirt. The use of cleaner Kit is a sensible precaution against losing valuable data. It is recommended to clean the drive head once a week. It is very simple to use. Available in 3.5" & 5.25", please specify.

Price £4

Antistatic Lockable Disc Storage Units

Gives double protection – Strong plastic case that affords real protection to your discs. Antistatic helps avoid data corruption whilst in storage. The smoked top locks down. Dividers and adhesive title strips are supplied for efficient filing of discs.

- M35 – holds up to 50 5.25" discs **£4.95**
- M85 – holds up to 95 5.25" discs **£6.95**
- M25* – holds up to 25 3.5" discs **£4.95**
- M50 – holds 50 3.5" discs **£6.50**
- M10 – holds 8 of No. 10 Data Cartridges **£15**

* Not lockable

Plastic Library Cases

Holds up to 10 x 3.5" Discs. **£1.50**
Holds up to 10 x 5.25" Discs. **£2.00**

Dust Covers (For our Disc Drives)

- Single CLS (without PSU) **£3.20**
- Single CS (with PSU) **£3.25**
- Twin CLD (without PSU) **£3.85**
- Twin CD (with PSU) **£3.90**

Disc Albums

Attractively finished in black leather-look vinyl. Stores up to 20 discs. Each disc can be seen through the clear view pocket.

£4

Quality Disc Drives from Watford

To help you decide which drive is the most suitable for your needs (and your pocket!), we have produced the table below. The tinting of the boxes indicates 40/80 track switchable disc drives. For ease of use, the switches are mounted on the front panel.

All our Disc Drives are Double Sided and will operate in both Single and Double Density modes. Extensive experience of the usage of disc drives suggests that the JAPANESE drives currently represent about the best in terms of speed, reliability and overall "elegance" available for the BBC Micro. Various UK "manufacturers" of disc drives for the BBC micro (more accurately, "packagers" label other manufacturers drives with their own name). We buy the high quality NEC and Mitsubishi drives in large quantities directly from the manufacturers, package them and sell them at "dealer" prices direct to the public.

If you look around the popular BBC micro press, you will find that the prices we quote for the top quality, new slimline disc drives are, virtually without exception, some of the best around. These prices, coupled with the backup of one of the country's largest distributors of BBC peripherals provides a superb deal. Unless you anticipate using dual drives in a fully expanded BBC system for long periods of time with little ventilation, then we suggest that our range of "CL" disc drives without the PSU (Power Supply Unit) would be quite adequate (extensive tests within our workshops have confirmed this). All drives are supplied complete with a SPECIAL UTILITIES Disc, Cables and Plugs. The Drives with power supply have a mains moulded plug for safety purposes. **Ideal for Schools & Colleges.**

When using a BBC Micro, most people find themselves short of desk space. The Watford's BBC Micro plinths form an ideal way of recovering some of this precious space) your BBC Disc Drive and Monitor can all occupy the same vertical footprint and still be comfortably situated. With the Watford Double plinth, your Disc Drive is mounted vertically at one side, leaving a very valuable area directly in front of you for such useful items as spare discs, pen, paper, reference manuals, etc. Follow the trend with a Watford plinth. (Turn to the 4th page of our advert for the Plinths).

P.S. All our 5.25" Disc Drives with PSU are compatible with the Compact Micro. All you require is the special Compact Disc Drive Cables designed by us.

Our Disc Drives conform to BS415

"Test Bureau Approved for Use in Education"

| Capacity | Drives without P.S.U. | | Drives with P.S.U. | |
|---|-----------------------|------------------|--------------------|-----------------|
| | Single | Twin | Single | Twin |

| 800K (1,44M) | | CLD 800S £142 | | CD 800S £159 |
| • TWIN Disc Drive Case, complete with Power Supply & Cables £43 Securicor carriage on Disc Drives £6 to £7 | | | | |

Prefix C = Cased Drive L = Less PSU S = Single D = Double
 Suffix S = 40-80 Switchable

e.g. CLS400S = Cased Disc Drive, Less power supply unit, single 5.25" 400K, (720K in double density); Double sided; 40/80 track switchable.

Special Cable to connect both 3.5" and 5.25" Disc Drives simultaneously to the BBC Compact £13

Special 40/80 Disc Drive/DDFS Mk II Offer

• The popular 40/80 track 400K single Disc Drive, Double Sided, cased with Cables. Plugs directly to your Micro.

• Watford's extremely popular DDFS Disc Interface (allows 720K storage). Will run in both Single & Double Density modes.

• A comprehensive User Friendly Manual.

A Bargain at Only £119 (£7 carr) (Offer valid while stocks last)

3.5" DISC DRIVE OFFER

These top quality 3.5" Double sided, 80 track, 1 Megabyte (unformatted each Disc Drives), are attractively finished in BBC beige. They are supplied complete with all cables and a Utilities Disc.

Drives to connect to BBC Micros own PSU

• CLS35 400K Unit £62 • CLD35 Twin 800K £109

Drives with built-in Power Supply Unit

• CS35 Single 400K £84 • CD35 Twin 800K £126

(P.S. CS35 Single is supplied in a twin case with a blanking plate to enable easy expansion to a dual drive at a later stage).

DISC DRIVE SHARER

(Ideal for educational establishments)

At last, a low cost alternative to the Econet system. Watford's Intelligent Disc Drive Sharer allows you to connect 3 BBC micros (model B, B+ and Master series) to a single or double disc drive. Running under any DFS or DDFS, this intelligent unit will automatically queue the computers. Each computer has a status light dedicated to it. If it is green you will get immediate access to the disk, and red means that you are next in line. The unit plugs directly into the disc drive socket on each computer and is powered by the mains. (N.B. Not for use with ADFS.)

Price includes 3 Cables

Offer Price : £55

CDPM 800S

DP35-800S

Twin 800K Double sided 40-80 track switchable disc drives mounted in an attractively finished Beige colour plinth for the BBC Micro. Supplied complete with integral power supply, cables and Utilities disc. The mains switch with neon On/Off light indicator, and the two 40/80 track switches are mounted on the front panel for ease of use.

CDPM 800S for the BBC B & Master £165

A Double disc drive with a difference! Times are changing fast for the floppy disk, and whilst the current standard for the BBC B and Master series is the 5.25" disk, the standard of the future will most certainly be the smaller; faster and more reliable 3.5 inch disks - now a standard feature of both the Master Compact and the Archimedes Series.

To support the present disc drive users, and cope with the future, we have designed our own plinth-mounted disk system - called the DP35 800S. It contains both the 5.25 inch and the 3.5 inch drive formats as well as offer a firm and rigid support for a monitor on top. With the BBC Micro underneath, the plinth makes a surprisingly small footprint on the desk - leaving you more space to work with.

The 5.25" disc drive is 40/80 track switchable. DP35-800S has its own power supply, independent of the BBC Micro.

DP35-800S for BBC/Master £154

(Securicor Carr. £7)

(The above drive units are 2 Megabytes unformatted)

WE Mouse House

Treat your mouse to a cosy Mouse House. This handy little gadget solves the problem of where to store your mouse when it is having a rest. Made of sturdy plastic, the WE Mouse House attaches to the side of your computer, monitor, disc drive or desk.

It protects it from damage when not in use, yet within easy reach when you need it again. There is also a second compartment for your pens and pencils – and at £4 it doesn't cost a rodent's ransom.

Price £4

Our Mark II Light Pen is the very latest in light pen technology. It is totally insensitive to local lighting conditions and works with many different monitors. The pen only responds to the High Frequency light produced by your monitor/TV. An LED indicates when valid video data is being produced. A conveniently located switch is also fitted. (Price includes FREE software Disc and Operating Manual)

- Fonts N Graphics Disc Utility **£13**

BEEB VIDEO DIGITISER

"Test Bureau Approved for Use in Education"

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro. This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket. The software supplied includes a sophisticated, fast screen dump routine.

Images produced can be compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem. The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

£109 (Carr. £5)

(BBC B+ and Master compatible, except Master with Econet)

(Price includes) Digitiser Unit, Software in ROM & a Comprehensive Manual)

The Beeb HandScan

Hand-held Scanner for the BBC Micro

Watford Electronics are pleased to announce the launch of the first hand held scanner for the BBC Micro. HandScan is a compact unit which will allow photographs, diagrams, or any other documents to be digitised quickly and easily, to then be used in a desktop publishing package, art program, or even in your own Basic programs! These useful devices have been available for faster and more expensive micros for some time, but only now is Watford Electronics able to offer the BBC Micro computer.

The HandScan plugs directly into the 1MHz bus on the BBC while a comprehensive set of utilities provided by the sophisticated ROM firmware. The scanner has a resolution of either 100 DPI or 200 DPI when accuracy is essential. Pictures as wide as 4" may be scanned in mode 0 and various types of dithering may be selected to simulate the grey levels of a scanned picture.

All necessary software has been included in the firmware to allow the scanner to read images directly into our Wapping Editor with little more than the click of the mouse. The digitised picture may then be incorporated into your magazine, newsletter, report or any other document.

Beeb HandScan & Firmware **£135**

**Winner of the BBC Acorn User 1990
Award for the Best DTP/Word Processor**

The Wapping Editor

The Wapping Editor from Watford Electronics represents a breakthrough in Desktop Publishing for the Beeb. The package includes a 64K ROM containing ALL the software needed to get into print fast; a very sophisticated graphics module, professional quality typesetting software, a word processor, a comprehensive font editor for designing your own typefaces, and a variety of printer dumps. This mouse-driven system is designed for the BBC B, the B+ and Master computers and will take full advantage of any Sideways and Shadow RAM that may be fitted. It will run under DFS, ADFS and Network filing systems and requires as a minimum just a single 40 track drive.

Included with the system is a utility disc containing several high quality fonts, various utilities and a ROM image of a Support ROM. A comprehensive 100 page manual completes the package. The Support ROM contains routines to allow an area to be rotated to any angle or distorted to any four-sided shape. Also included are facilities to draw ellipses at any angle and sectors, segments and arcs (in Master or BBC B with Acorn GXR). Another of the features of the Support ROM is a 'Turbo DFS' which gives DFS access times comparable with those of ADFS.

Page Layout Section

The Wapping Editor may be used to create pages of any size from an A6 to a full A3 page. If none of the eight default page types suit your purpose, the stand-alone page creation program may be used to create pages to your own requirements. By using proportionally spaced fonts and genuine microspacing it is possible to print over 150 characters across an A4 page. A unique feature of the Wapping Editor is the 'A5 x 2' page size allowing two A5 pages to be printed side by side onto a single A4 sheet.

The graphics module incorporates the facilities like: pencil, brush, airbrush, polygon, circle, ellipse, fill, cut & paste, etc.

Text may be typeset, either justified or unjustified, in any font anywhere on the page. Simply select which font and text document you wish to use, and pull out a rectangle on the page where you want the text to be – it's as simple as that! Multiple columns may be printed just as easily and a special 'expand' feature may be used to expand the microspacing so that the document exactly fits the space defined.

Word-Processor

The integral word processor is the ideal tool for producing your text documents, although text can of course be read in from any of the other popular word processors such as View, Wordwise etc.

The Font Editor

The font editor module will allow you to design your own typefaces or to modify the ones provided on the utility disc. This sophisticated editor has numerous functions designed to take the tedium and frustration out of producing good looking, well balanced fonts. Each character may be individually proportionally spaced and characters of any size up to 16 x 16 pixels may be defined.

Pictures may also be 'grabbed' from a video source by using the Watford BEEB Video Digitiser.

Wapping Editor Software Pack £69
Wapping Editor plus Mouse £89

(Wapping Editor only works with Master Compact if a Mertec Expansion box is fitted)

NEW

At the request of many of our customers we are now able to offer training in the use of Wapping Editor DTP package. For further information please telephone 0923 37774 and ask for Tim or Shiraz

Wapping Art Disc

Over 250K of clip art to cut and paste into your Wapping Editor pages. Pictures include maps, transport, people, media, sport, games etc. Two 'ratio' screens for use with hi-res and rotated A5 pages to ensure images are not distorted when printed out.

Music writing symbols in the form of pattern and brush for quick production of manuscripts are included together with staves.

There are two prepared hi-res pages laid out for printing labels, both single and double width. Ready made label designs are included but these can be easily replaced with your own designs.

A Mode 0 screen dump routine is also included. To pack such a large amount of data onto the discs the screens have been compressed and routines to compress and expand Mode 0 screens are included on both discs. Using the packing routine you can archive large numbers of screens onto a single disc.

£15

Wapping Font Disc 1

Sixteen additional fonts, including smaller version of Oberon and Daisy and two new sizes of the standard font for the Wapping editor. Also included are three Mode 0 screens containing giant 'headline' fonts to cut and paste to create extra smooth headlines. Supplied complete with instructions.

£12

Wapping Font Disc 2

This new addition to our Wapping range of DTP software provides you with additional 23 fonts for the Wapping Editor DTP pack. (80 track discs only).

£13

Laser Direct

By using the power of the Archimedes RISC processor, it offers the best of both worlds – print speed up to 5 times faster than typical Laserjet compatibles – uses outline fonts so that any font can be scaled to any size – works with all programs that use RISC OS printer drivers. Ideal for use with Genesis, IDraw, Acorn DTP, Impression, etc. Includes 50 sheet paper tray and a single sheet/envelope tray. Requires one expansion slot and at least a 2Mbyte Archimedes. A very compact printer, a very low initial cost and very low running costs.

Special Price: £849

- Special High Res Laser Direct Card 600 DPI for Canon LPB4 Laser Printer **£325**
- LPB4 Printer plus High Res Card **£1025**

**All prices are exclusive of
VAT**

Archi Mk II Hand Scanner

Watford Electronics is now able to offer a complete hand held scanning package, possibly the most essential addition to any desk top publishing system, for only £149. The package includes the most comprehensive utility software available for the Archimedes, a high quality hand held scanner, and all necessary documentation to get you going straight away.

SCANNER

The scanner is capable of scanning up to an amazing 400 dots per inch (DPI)! The scanning area is 4" wide, and the height is only limited by the maximum amount of memory available. The dot resolution may be switched to 100, 200, 300 or the maximum 400 dpi. One of four operating modes may be selected offering either pure monochrome scanning, or one of three grey level modes. The grey level modes use different size dither patterns to represent up to 16 shades of grey. There is also a dial to allow the "brightness" to be adjusted over a wide range, in order to optimise the quality for any specific image. The scanner interface is a standard, single width, expansion card (module) which plugs into the Archimedes' backplane. The socket on the rear panel connects the scanner by 1.8 metres of cable.

SCANNER SOFTWARE

Full use is made of the windowing and the multi-tasking facilities of RiscOS. The software is supplied in a 64Kbyte ROM located on the interface board. The scanner appears as a small icon on the desktop icon bar, and the software is retrieved from the ROM simply by clicking on that icon. As you scan a page, the image appears in the scanning window on the screen, scrolling up in real time. The other facilities included in the software are:

Cropping and scaling to any size including stretching and squashing in X and Y direction separately. Colour tinting. X and Y flip.

Edge detection which turns solid objects into outlines.

Selective directional copying which allows features (i.e. lines or text) to be made thicker or thinner.

Scanned images may be saved as sprite files or transferred directly into other RiscOS applications (DTP, Draw, Paint) simply by dragging the sprite file into the application's window. Sprites may also be generated using anti-aliasing. This greatly improves picture quality and is particularly effective when scanning material with a range of grey tones, such as photographs. Images can be printed on any printer that is supported by a RiscOS printer driver, with optional settings for portrait or landscape modes, image scale and positioning. Images are printed using the full resolution of the printer and are not limited to the screen resolution.

On-screen help is provided via the RiscOS interactive help facility. Calls are also provided in the ROM for users wishing to write their own software, incorporating the use of the scanner.

AHS-4 Archi 300/400 Version £149

AHS-3 Archi A3000 Version £175

STAFF VACANCIES

Watford Electronics is the leading supplier in the Acorn computer field and has established itself in the PC compatible market with its Aries PC computers. In its eighteen year history, Watford has always kept itself at the forefront of the new technology. Due to our latest expansion, we require staff to man our BBC/Archimedes and PC Technical Departments. Applicants will be required to be familiar with BBC/Archimedes hardware and software, and PC staff will need to be familiar with PC computer hardware. Good rates of pay, excellent prospects. Subsidised company accommodation is available to single persons if required. Telephone Keith Archer or Shiraz Jessa for interview, or write to us enclosing your CV.

Solderless Sideways ROM Socket Board

The key features of this new, no fuss, easy to install quality product from BBC leaders Watford Electronics are as follows:

- Increase your BBCs capacity for ROMs from 4 to 16.
- No soldering required.
- Very low power consumption.
- Minimal space required.
- Compatible with Torch, DDFS, RAM Card, 2nd Processor, etc.
- Socket 14 takes two 6264 RAM chips.
- Read protect to make RAM "Vanish" allows recovery from ROM crashes.
- Battery backup option for RAM chips.
- Supplied ready to fit with comprehensive instructions.

Price: Only £35

Battery Backup fitted **£39**

Battery Backup only **£3**

16K Sideways RAM **£8.50**

(carriage £3)

- Sideways RAM Utilities Disc for Solderless ROM Board. Includes the options to load and save ROM Images and the facility to use Sideways RAM as Printer Buffer.

Only: £8

User Port Splitter Unit

Gone are the days when you had to plug and unplug devices from the User Port. This extremely useful little device allows two units to be connected to the User Port simultaneously, and select between them simply by toggling a switch. This device is particularly useful for those people using Quest Mouse and the Watford Video Digitiser or any similar combination

Excellent Value at £22 (carr £2)

Sideways ROM ZIF Socket System

Allows you to change your ROMs quickly and efficiently, without opening the lid. The ZERO INSERTION FORCE (ZIF) socket is located into the ROM Cartridge's position.

- Very simple to install. NO SOLDERING required. The ZIF (Zero Insertion Force) eliminates the possibility of damage to your ROM pins when inserting & extracting.
- The low profile of the socket allows unrestricted access to the Keyboard.
- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.
- This versatile hardware solves the problem of running out of socket space. Simply lift the ROM from the ZIF & insert a different one (No pulling or pushing of Cartridges. It is a must for professionals and Hobbyists alike.)
- BBC, B and B+ compatible.

ONLY £18 (carr £3)

BBC B Low Profile Cartridge System

Complete System consists of: Low profile ROM Cartridge, Socket housing, Cable assembly, 5 labels and a library storage rack for the BBC B.

- Complete System **£11**
- Spare Cartridges **£2.75**
- Spare Rack **£1.65**

ROM Cartridges for the BBC Master

Will accept the new larger Pkggy Back ROMs like: Interword, Interbase, Quest, Conquest, etc

Twin £9; Quad £14

16K Disc Ram Module

(16K Sideways RAM Module)

Complete with such features as read and write protection, these new modules from Watford Electronics are ideal for the hobbyist, software developer and ROM collector. Key points to note about this new addition to the Watford range of products are:

- Write protection (useful in a variety of circumstances)
- Compact construction
- No overheating or overloading problems.
- Free utilities disc supplied
- Can be used as a 16K PRINTER BUFFER.
- Ideal for professional software development.
- Supplied with utilities software disc.

Only: £29 (carr £2)

Optional Battery back-up fitted

£3

ARIES CORNER

B-32 Shadow RAM Card

Like the BBC B+, the B32 provides 20k of shadow screen RAM and 12k of sideways RAM. Unlike the B+, the B32 has simple software commands which allow the user to reconfigure the RAM as 16k of shadow RAM and 16k of sideways RAM, or all 32k as sideways RAM.

With the B32, the programmer gets up to 28k of RAM available for Basic, Logo, Cobal, Forth, Lisp and BCPL programs in any screen mode. The business user gets extra memory for View, ViewSheet, Wordwise Plus, Interword and many other applications. For advanced applications, the scientific user gets access to a massive 47k of data storage using the Acorn approved ★FX call.

Sideways RAM enables you to load sideways ROM images from disc, allowing you to have a large library of sideways ROMs (subject to the copyright holder's permission) stored on disc. The B32's sideways RAM can also be used to extend any operating system buffer (such as the printer buffer) or to load tape programs into a disc system.

The B32 simply plugs into the 6502 processor socket on your BBC micro — no flying leads to connect and no soldering. Provision of the onboard ROM socket means that the Aries-B32 control ROM does not use up one of your existing ROM sockets.

- Recommended by Computer Concepts for use with their Inter series of ROMs.

Price: £69 (carr. £3)

Aries B-12 Sideways ROM Board

The B-12 provides a total of twelve sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS sideways ROM system. In addition, there are two sockets for sideways RAM, giving up to 16k of RAM using 6264 static RAM chips.

If you do not have a B32 or B20, a small adaptor module (the Aries-B12C) is available at a nominal cost

**Price: Aries B-12 £36
Aries B-12C £5**

Aries B-488 IEEE-488 Interface Unit

The Aries-B488 is an interface unit to enable the BBC micro to control and monitor IEEE-488 bus systems. The IEEE-488 bus (also known as the 'GPB' or 'HP IB') is the standard method of interconnecting programmable laboratory instruments and control equipment. Using the B488, up to 15 devices may be connected in a single high-speed data network.

ROM/RAM Card

Watford Electronics announced the first ever commercial ROM board for the BBC micro, the Watford Electronics 13 ROM Socket Board 7 years ago. Following the success of this board, we have designed what probably represents the ultimate in expansion boards, the new Watford Electronics ROM/RAM board. This highly versatile and sophisticated board represents the latest in "2nd generation" sideways ROM technology for the BBC micro, designed to satisfy the serious BBC user.

- NO SOLDERING required to fit the board.
- NO User Port corruption (avoids problems with the mouse, modems, Eprom Programmers, etc.)
- Fully buffered for peace of mind.
- Compatible with BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8.
- Up to 8 banks of sideways RAM (dynamic).
- Option for 16k of battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM (ALLEVIATES crashes during ROM development).
- Separate RAM write register (&FF30 to &FF3F).
- Automatic write to currently selected RAM socket for convenience.
- FREE utilities disc packed with software.
- Compatible with our DDFS board, 32k RAM Card, Delta Card, sideways ZIF, etc.
- Large printer buffer.
- UNIQUE fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
- ROM to RAM load and save facilities.

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD &7F for ROMSPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster.

The ROM-RAM Board plugs into the 6502 CPU socket. This leaves free all the existing ROM sockets, which can still be used normally.

Any ROM that can be plugged into the BBC micro's own ROM sockets may be used in the ROM-RAM Board.

The ROM-RAM Board is supplied with all ordered options fitted as standard. Upgrade kits (with full instructions) are available for all of the options, for later.

PRICES:

- ROM/RAM card with 32k dynamic RAM **£48**
- ROM/RAM card with 64k dynamic RAM **£65**
- ROM/RAM card with a massive 128k dynamic RAM **£109**
(carriage on ROM-RAM Card £3)

OPTIONAL EXTRAS:

- 16k plug-in Static RAM kit **£9**
- 16k Dynamic RAM for Upgrade **£13**
- Battery backup **£3**
- Read and Write protect switches **£2 each**
- Complete ROM-RAM board **£115**
- All options installed **£115**

P.S.
IS your existing ROM Board overflowing with ROMs? Do you need more Sideways RAM? Is your Board unreliable? Then upgrade to Watford, ROM/RAM Board and pay £5 less.

32K Shadow RAM/Printer Buffer Card Expansion Board

A MUST FOR WORD PROCESSING

Don't throw away your BBC B for a BBC B Plus or BBC Master. Just plug the ribbon cable into the 6502 processor socket, and fit the compact board inside the computer. Immediately you will gain not 16k or even 20k, but a massive 32k of extra RAM!!!

- IMPROVE your WORD PROCESSING system, whether disc or cassette based. Don't wait for a slow printer – type in text while printing. TWO JOBS DONE SIMULTANEOUSLY and £100+ saved on a printer buffer.

- "VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28,000 bytes free – 5 times as much as normal.

- In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24k of text in memory. This product is recommended as an ideal complement by Computer Concepts.

- Combine GOOD GRAPHICS and LONG PROGRAMS. Use the top 20k of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs. Benefit from MODE 0/1/2 graphics and 28k of program space.

- Use the FULL 32k or the bottom 12k of the expansion RAM as a PRINTER buffer for PARALLEL or SERIAL printers, sound channels, RS432 etc. Print large text files while running long graphics programs, and have all your buffer options available as well (*FX15,21,138, 145,ADVAL etc). Please note only a 12k printer buffer can be used with Wordwise or Wordwise-Plus, due to the way they are written.

- Unique facility to turn ROMs off and on again. Unlike all other ROM managers, this feature does not use 'unofficial' memory. Two bytes of normally user-inaccessible memory on the RAM card are used to ensure ROMs are disabled WHERE OTHER ROMS FAIL.

Only £59 (carr £3)

(Price includes a comprehensive manual and the ROM)

BBC SOFTWARE'S Popular Educational Software

- Maths with a Story 1 (Disc). 4 primary level maths programs **£11.25**
- Maths with a Story 2 (Disc). 4 further maths programs. **£11.25**
- Picture Craft (Disc) 6-14 age group. Pack consists of flexible geometrical design & colouring programs. **£17.00**
- ECOLOGY O-Level program. **£20.00**
- POLYMERS O-Level program. **£20.00**
- Classification & Periodic Table O-Level. The suite is supplied with its own database of chemical elements which can be classified according to your own rule. **£20.00**

VIEW PRINTER DRIVER DISCS

| | |
|-------------------|-----|
| Epson FX & RX 80 | £10 |
| Juki & Brother HR | £10 |

VIEW PRINTER DRIVER ROM

View is a powerful word processor, but it seriously lacks in terms of printer driver support. With the View Printer Driver ROM, the View users will find themselves in the realms of advanced word processing.

The VPD extends View's printer command with a series of mnemonic commands. All standard highlight sequences are also supported. A large range of printers are supported by drivers contained within the ROM (the drivers can be downloaded and customised). Printers supported include: Epson's MX, RX, FX, LX, JX80 range, Hi80, KP810/910, PW1080, JP101, HR15, M1009, GLP, Panasonic KX-P1081/2, JUKI 6100, etc.

Other printers are readily supported by defining a Printer Driver using the built-in Printer Driver Generator. The features mentioned below are available to both the built in Printer Drivers and user defined drivers (assuming the printer supports the features).

NLQ control, Underline, Bold, Proportional Spacing, Microspacing, Italic, Superscript, Subscript, Condensed, Enlarged, Double Strike, Set lines per inch numerically (e.g. LPI 6), Set characters per inch numerically (e.g. CPI 5), Select printer font, Select printer ribbon colour, Translation sequences, Emulation of BBC Character Set, Simple numeric expressions for certain operations, Full printer setup, Send control codes, Print prompt on screen, Redefinable Pad character, Pause for key press, Prompt to change daisywheel, and Execute ★ command when printing.

Other features include a very powerful on-screen preview, with bold, italic, underline, super/subscript, enlarged highlights, and a special printer driver to allow memory-based text to be previewed by View 1.4. Of course, View 1.4, 2.1 and 3.0 are all supported, as is Shadow RAM and 6502 Second Processors. The BBC B series and Master series of micros are supported. A comprehensive manual is supplied. All in all, a very professional product for the discerning user who wants power at their finger tips.

Price: Only £33

OFFICE MASTER

CASHBOOK – A complete "Stand Alone" accounting software package for the cash based sole trader/partnership business. It is designed to replace your existing cashbook system and will provide you with a computerised system complete to trial balance.

FINAL ACCOUNTS – Will take data prepared by the Cashbook module and produce a complete set of accounts as following: Trial Balance with inbuilt rounding routine; Notes to the accounts; VAT Summary; Profit & Loss A/C; Balance Sheet.

MAILIST – A very versatile program. Enables you to keep records of names and addresses and then print, examine, sort and find them, all with special selection techniques.

EASILEDGER – A management aid software tool designed to run alongside an existing accounting system. Essentially a Debit/Credit ledger system which can handle sales, purchase and nominal ledger routines to provide instant management information.

INVOICES & STATEMENTS – Greatly reduces the time and cost of preparing Invoices and Statements by storing essential information like customer names, addresses and account numbers. Has VAT routines and footer messages facility.

STOCK CONTROL – Allows you to enter stock received, stock out, summary of stock items and current holdings together with details of total cost, total stock to minimum level, units in stock ordering, quantity and supplier detail.

All this for only £21 (Disc)

OFFICE MATE

- DATABASE
- BEEBCALC SPREADSHEET
- BEEBPLOT GRAPHICS

DATABASE – Set up a computerised card index system with powerful search facilities.

SPREADSHEET – Offers many calculation and editing features

BEEBPLOT – Provides visual representation from Spreadsheet data.

Copy Holder

Whether you want to type in your latest program or the draft of a new trilogy, Watford's manuscript holders are superb for holding your paper at the ideal height and angle to allow you to read and type in ease and comfort.

Available in 2 full A4 versions, desk resting and shelf clamping. Paper is held firmly by means of a plastic retaining ruler and a clip grip. (for resting books or magazines, the desk top version is recommended).

Desk Top £7 (carr. £3)
Angle poise £12 (carr. £3)

THE EPSON RX-FX-KAGA

Printer Commands Revealed

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out? Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX-KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English, how to use and make the most of your KP810, PW1080A or any other Epson FX80 compatible printers like Panasonic KX-P1080/1, etc., with the BBC Micro, both from Basic and Wordwise.

It describes in detail how to obtain the maximum in graphics capability from your printer and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accompanying BBC Basic program and an example of its use from Wordwise.

NEW

ACORN TO PC

Stop the Confusion!

Do you have to use both Acorn computers and PC's? Would you like to use your Archimedes or A3000 in PC-emulation mode but are unsure of the new commands?

Although Acorn machines (such as the BBC B, the Master, the Archimedes and the BBC A3000) are mainly used in education, most commercial computers use other operating systems, particularly MS-DOS. As a result school computer users are at a disadvantage when moving into 'business' computing. PCs and other commercial computers use MS-DOS as the operating system, so commands for formatting, copying, backing up, printing and the modem are not the same. Even file names are written differently! And did you know that there is one Acorn command which, if used in MS-DOS, wipes everything in the current directory?

'ACORN TO PC' enables you to change over painlessly. It shows clearly and quickly how, why and where the two systems (Acorn and MS-DOS) differ. As with a foreign language dictionary, you can use the book to transfer either way – from Acorn to MS-DOS, or from MS-DOS to Acorn.

'ACORN TO PC' also acts as a handy reference guide to all Acorn star commands and their MS-DOS equivalents. It also has an extensive and readable explanation of the directory tree and hierarchical filing systems in general. Both DFS and ADFS Acorn systems are covered. 'ACORN TO PC' is written clearly and concisely by Dr. John Lockley, who has wide experience of writing and broadcasting. He is currently appearing as a regular contributor on Radio 5, and is co-author of 'The Complete BBC Computer User Handbook'.

Price: £15.95

The Complete BBC Computer User Handbook

If you own a BBC B, B+, Electron, Master 128 or Master Compact, or Archimedes, then this is the book for you. It shows how to get the best from your machine, and how to make it work for you. The general style and level of presentation means that both the expert and beginner alike will feel comfortable with the quality and quantity of the material. Subjects covered include the general use of computers, hardware design and peripheral devices like printers, disc drives, etc., and Networking. Programming hints and tips and various disciplines for making a better program are discussed in some detail, including debugging of specific errors. Standard programs are covered, such as wordprocessors, spreadsheets, databases, graphics, communications, etc., which brings you neatly on to the subject of using computers in the office or at work – even giving advice on writing and marketing your own programs. A book you will enjoy to use as a reference, or read from cover to cover, over and over.

Only: £14.95 (No VAT)

Beeb PC (BASIC)

Beeb PC Basic is designed for program authors wishing to convert programs so that they will run on IBM personal computers. To convert BBC BASIC programs manually can waste days of valuable time with every occurrence of common statements such as PROC, DEFPROC, TAB, having to be changed. Beeb PC (BASIC) automates many of these changes, and will convert majority of BBC statements that are invalid for IBM BASIC into equivalent acceptable statements. In addition BBC BASIC data files can be converted to IBM BASIC format, with support provided for all BBC data formats:- INTEGER, REAL & STRING.

Price: £38

Beeb DOS 3.0

(Now reads Archimedes Discs)

The BBC and IBM PC's are the most popular micros in the UK. The BBC is firmly established in the education sector and the IBM is the industry standard in the business world. The pools of information and applications held on these computers are immense, yet the means of passing information between them are very limited. Beeb DOS provides a practical method of transferring information between these two micros.

Beeb DOS is a collection of utilities which run on the PC's and enable it to read and write information on BBC discs. You can transfer files between your PC's 360K floppy, high density floppy or hard disc and your BBC discs. In addition Beeb DOS allows you to catalogue, format and compact BBC discs and delete, re-name, lock and unlock BBC files, all on PC's. Each Beeb DOS utility is written in IBM assembler and is run directly from PC or MS-DOS. The Beeb DOS utility can be run from floppy disc, hard disc or RAM drive.

Beeb DOS is supplied on an IBM 5.25", 360K disc complete with a comprehensive operating manual. (Will only work on 360K Disk Drives & read only ADFS and Watford DDFS – not DFS).

Price: £39

The Complete Mouse User Guide to BBC Micro

This manual has been written to reveal the secrets of the mouse. It explains all the principles required by the hardware and associated software, and also example listings for inclusion into custom programs. The manual first details the basic principles of the mouse and a simple program which uses these principles. This information should be adequate for most applications. However, it is possible to improve the performance of the mouse by expanding on the principles already used in the software. This is again fully explained and an example program given.

It is possible to gain a full understanding of the mouse from this manual. For those not interested in exactly how the mouse functions, complete example programs are also included. These may be typed directly into the micro, without the need for any understanding of the hardware or software involved, enabling the mouse to be used for custom applications.

Price £5.95 (No VAT)

Example programs on Disc £4.95

ADDER

The only low cost EPROM Programmer for the BBC Micro that will program both the standard 21V and the new 12V5, 27128 EPROMs. The Adder unit connects to the User Port and draws its power from there too. The EPROM is mounted in a top quality ZIF socket. There are no switches or controls as Adder is entirely software controlled.

The Adder software provides sophisticated facilities for programming EPROMs from a RAM image produced by loading disc files. The software is menu driven and designed for ease of use.

Features:

- Two ultra fast programming algorithms or standard slow algorithm.
- Supports standard 21V programming and newer 12.5 volt EPROMs. (Software switched).
- The RAM image to be programmed can be built up in many ways. Sections of image can be loaded separately. Part programming. Read EPROM. Edit data in memory.
- Automatic processing to handle a list of files to program into the EPROM.
- Automatic disc buffering to allow programming of 32K 27256 devices from a 32K file without extra effort.
- Verification gives detailed error list and checksums are maintained. There is also a blank check facility.
- Works with all standard filing systems. Generates header code for RFS ROMs to allow Basic programs etc. to be stored in EPROM. More than one file per ROM permitted.
- Programs the following EPROMs: 2516, 2716, 2532, 2732, 2764, 27128, & 27256.

£65 (£5 Carr)

TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** - Standard version erases up to 16 chips. **£32 (carr £3)**
- **ERASER GT** - Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£34 (carr £3)**
- Spare UV tubes. **£12**

ARIES PC 386-SX

The Aries PC 386-SX combines many of the powerful features of the 386 system with the frugality of a price tag more at home on a 286 system. With 8/16MHz CPU, this system provides virtually full 386 performance, including the more convenient scheme of memory control that allows easy configuration of expansion RAM as EMS for DOS application.

Features:

- 80386-SX CPU with optional 80287/80387 Maths Co-Processor
- 8/16 MHz selectable speed
- Legal Bios with built-in Setup routine
- OS/2 and XENIX compatible

Specifications:

- 1MB RAM on-board expandable to 16Meg
- 1 x 5.25" - 1.2Meg Drive fitted
- 1 x 3.5" - 1.44Meg Drive fitted
- 40Meg 28mS Hard Disc Drive fitted (1:1 interfaced)
- HDD/FDD Controller Card
- 102 Key Keyboard
- Case with Keylock
- Eight expansion slots
- Two Serial and One Parallel Ports
- Logitech mouse
- 12 months On-Site maintenance
- £300 worth of Software, (MS DOS 3.30, GW BASIC 3.21, Digital Research's GEM, Finesse 1.1 DTP pack, Multiwriter Wordprocessor & Spellchecker, PC Organiser), FREE with every micro.

New Low prices:

- **System 1** - Specification as above plus a 14" High Resolution Flat Screen mono monitor **£1098**
- **System 2** - As system 1 plus a 14" High Resolution Flat Screen EGA Monitor and Card **£1268**
- **System 3** - As system 1 plus a 14" High Resolution Flat Screen VGA Monitor and Card **£1399**
- **System 4** - As system 3 (VGA) with 80MB 28mS fast Hard Disc Drive fitted **£1544**
- **System 5** - As system 3 (VGA) with 155MB 16mS super fast Hard Disc Drive fitted **£1899**

PC External Disc Drives

(for IBM PC, Amstrad 1640 & Compatibles. Supplied complete with case, cables and power supply. Ready to plug)

Aries Notebook PC XT & Aries Notebook PC NB286-12

Full Desktop PC Power for People On The Move

First the desk top, then the luggable, then the lap top and now the notebook PC, a truly portable design of PC computer. Imagine an IBM PC compatible computer so small that it will fit inside your briefcase with room to spare, so light (just over 7 pounds) that it is easy to carry wherever you go.

The Aries Notebook PCs have 1MB RAM as standard, including 384KB EMS, an advanced Liquid Crystal Display with switchable backlight, and a standard layout full size keyboard with a comfortable tactile feel. They are also equipped with a full complement of six built in ports, two RS232 Serial, one printer, one external floppy drive, external keyboard and a CGA colour monitor. The obvious benefits include the ability to connect directly to a printer, and to a full size desktop computer to transfer data or text, etc, or to a modem for communications. Multiwriter 2 Word processor/spell checker, and PC Organiser diary software is supplied with all Notebook PCs to get you started, so now you can take computing power with you where you want to go, in the office, workshop or laboratory, on site, on the train, plane, or at home.

Aries Notebook I, II and III

These Aries Notebook PCs have energy-efficient 80C88 processor chips running at 10 MHz. Model I is supplied complete with a single 3.5" - 1.44MB floppy drive. The Notebook Model II and III are supplied with a 28mS fast access hard disc, 20MB and 60MB respectively. In his independent review (Computer Shopper - May 1990) the reviewer writes, 'The Aries Portable offers exceptional value for money... The computer itself is very much what you'd expect a notebook to be, small, with a cramped but very usable keyboard and a respectable backlight display. It is nice to see that you can actually use the extra 384K as EMS memory - there is even a utility that can turn the EMS into a RAM drive for you.' In his final verdict he writes, 'Overall, the single most outstanding feature has to be the price tag. A notebook PC with hard disc for under £1,000 has no competition at the moment. If you have a small briefcase, weak arms, or just like the concept of a truly portable computer, then this is your man'.

Specifications

| | |
|----------------------|---|
| Processor: | 80C86 running at 10MHz - Zero Wait State - Real Time Clock/Calendar 1MB RAM - 640KB + 384KB LIM/EMS |

| Notebook NB286-12 - with Internal | |
| 3.5" - 1.4MB Floppy and 28mS | |
| 20MB 2.5" Hard Disc | £1285 |

New - Aries Notebook NB286-12

The New Aries NB286-12 has extensive features and facilities, much the same as for the 80C88 based Notebook series, but with the faster, high efficiency 80286 processor running at 12MHz, and with both a built in 1.44MB Floppy Disc Drive and 28mS 2.5" 20MB Hard Disc.

'... the strongest feature of the Aries is its Hard Disc, with a data transfer rate that would put most desktops to shame... the only notebook reviewed that incorporates a 16MHz processor (landmark speed). These two factors combine to make it the strongest performer...'

'In terms of value, the Watford comes up on top...'

'VERDICT: Excellent specification and performance. This has to be THE choice based on price and ability'.

Computer Shopper Jan. 1991

SQUIRREL

**THE REVOLUTIONARY NEW
DATABASE FOR ARCHIMEDES COMPUTERS**

FRIENDLY

Squirrel is the easiest to use database yet, allowing simple point and click database creation and queries.

FAST

Modern indexing techniques mean superfast searches every time.

FLEXIBLE

Images, text and sound may be stored in the same database

NETWORK COMPATIBLE

Client/server design ensures that squirrel runs just as well on networks as standalone.

INTELLIGENT

Squirrel understands days of the week, months of the year and recognises files from other popular packages.

COMMUNICATIVE

Queries may be made onto other popular computers such as an IBM or Macintosh, even remotely over telephone lines.

REPORTING

Fully relational reporting with an entirely new graphic approach to data selection.

PROFESSIONAL

Quite simply, the most professional database for Archimedes users.

Single User Version
£129.00 + VAT

Econet/Site Licence
£516.00 + VAT

Suitable for Acorn A3000, A310 and A400 Series.

£10 TIPS ON INTERSHEET

Boz Perryman from Birmingham has sent a couple of tips about Computer Concepts' *Intersheet*.

The first tip concerns the slightly mysterious function *SQS(list)*, which appears in the *HELP ISHEET list on screen but not in the manual.

What is strange is that *Intersheet* won't accept the *SQS* function in a calculation but will accept the *VARI(list)* function, which I discovered by examining the contents of the Sheet Rom, since this function is also not in the manual.

(Boz has version 1.06c of *Intersheet* but this may not be the case with, say, the Mega-Rom version). *VARI* must be a reference to variance, the statistical measure of dispersion of a set of values.

It doesn't actually calculate this, but instead calculates the sum of the squares of the values in the list – hence the *SQS* function. This function is very useful for statistics and data analysis, eg, calculating the correlation coefficient and gradient of a straight line fit to a set of data. Variance is defined as the mean squared deviation about the mean, so the larger this value then the wider the spread of the values about the mean.

The population variance (σ^2) can be found by subtracting the square of the mean from the mean of the squares.

As an *Intersheet* formula this would be:

```
sigma^2 = VARI(list) /
COUNT(list) -
AVERAGE(list)^2
```

The sample variance (s^2) is:

```
s^2 = (VARI(list) -
COUNT(list)*AVERAGE(list)^2)
/ (COUNT(list)-1)
```

The corresponding mean standard deviation (the other more common measure of dispersion) is simply the square root of the variance. The *VARI* function is useful for anyone using *Intersheet* for data analysis.

It saves a lot of space and calculation time, especially with

large amounts of data, since it removes the need for the extra column to calculate the sum of the squares of the values in the list.

It uses the same syntax as the

This is a way of overcoming one drawback that *Intersheet* has, namely that of always copying relatively.

Label references remain unchanged during copying but the normal box co-ordinates in a formula are altered in relation to the new position on the sheet.

The *BOX()* function can be used to refer to a box specifically, but this has the disadvantage that if the box to which it refers has to be moved, then the co-ordinates in the function (eg, *BOX(C25)*) are not changed, making all the formulae incorrect.

The best way is to use labels to refer to boxes absolutely and ordinary co-ordinates for relative references and to mix them within formulae.

Using labels in this way will also give more meaningful formulae, rather than a complicated list of co-ordinates.

There are certain things to remember when using formulae labels in *Intersheet* which are as follows (some are fairly obvious):

a) The labels must be present on the sheet otherwise a 'No such label' error is given when the formula is encountered.

b) The labels can be anywhere on the sheet and not just as column or row headings.

c) The row label can be to the right or left of the intersection box and the column label above or below.

d) *Intersheet* scans from top to bottom and right to left for the labels and will use only the first of duplicate labels.

e) Labels containing functions at the beginning of words are not allowed because *Intersheet* will translate these into the function and so cause a syntax error (eg, summary becomes *SUMmary*).

f) Similarly, normal cell references which are intended as part of labels are allowed, provided they are not placed at the front of the labels.

g) Individual labels can contain separate words (eg, Length of Cable) but a space is not needed between the two individual labels (eg, *QuantitySockets*).

HINTS & TIPS

is the same as Quantity Sockets).

h) The operator characters +*/^<> act on labels in the same way as ordinary cell references but are allowed as part of formulae labels provided they occur inside the label reference and not at the end.

i) The following characters are only allowed on their own (not as part of a longer label) when used as the row label, and cause an error if used as the column label:

! " # \$ % & ' () * + , - . /
0 1 2 3 4 5 6 7 8 9 ; : < = > ? @

A space is not allowed on its own as a column or a row label.

j) If a label such as min is placed before the label minute, then an error occurs if minute is used in a formula because *Intersheet* can find the label min but not the label ute. This is solved by placing the shorter label after the longer label on the sheet.

k) The resident integer variables A%-Z% can be accessed while using them as labels. This means that values can be passed to *Intersheet* from Basic, but it does not work in reverse. Labels do have their disadvantages also. Extensive use of labels uses up more memory and cell space (only 80 chars).

When used in a table which requires absolute references across and relative down, the down label references would require editing after a copy - you can't have it both ways!

£10 PARAMETER TO EXEC

Matthew Lewis from Chesterle-Street has written a program which allows parameters to be passed to EXEC files.

In the MS-Dos operating system on IBM compatible machines, a system called 'batch files', similar to EXEC files ex-

ists, where commands can be placed line by line in a text file, and this file can then be executed like a program.

The MS-Dos system has an advantage over the BBC operating system, which is that parameters may be passed to the batch file, so that you can vary what the file actually does!

The program, listed in the yellow pages, produces a machine code file called BATCH which is assembled at &900. This will EXEC a requested file but allows the passing of parameters.

After running the yellow pages listing to create BATCH, the program is run by typing:

```
*BATCH filename, Param0,  
Param1, Param2
```

You can use up to 10 parameters. The first parameter (Param0) is passed to %0 in the EXEC file, Param1 to %1 and so on. To include a comma in a parameter, just use two commas together

ie, ... To pass a blank parameter, put two commas with a space separating them, ie, ... To include a % in the EXEC file put %% instead.

To give you an idea of how this works, take for example the EXEC file:

```
*DIR %0  
*%0  
MODE 128  
LOAD"%1"
```

If this file was created (using BUILD, or !Edit, Wordwise, or whatever) and saved under the name Start, and you are then issued the command:

```
*BATCH START,BASIC,DEMO
```

then the commands actually executed would be:

```
*DIR BASIC  
*BASIC  
MODE 128  
LOAD"DEMO"
```

But if you issued:

```
*BATCH START,WORD,TEXT
```

then the same batch file Start

!INSPIRATION

The most comprehensive music sequencing package available for the Archimedes.

Come and visit our demonstration area, or phone for a demo disc. Fully Risc OS compatible. Purchase with Archimedes (special price), or simply add it to your existing system. All you need is a MIDI interface.

!Inspiration offers a control panel featuring: Replace and Overdub record modes • Cue Start and End • System Status Display • Multiple Save capabilities, and many other features.

Accounts Manager

The Professional Solution

FEATURES

- ✓ Sales, Purchase, Nominal Ledgers
- ✓ Budget Reports
- ✓ Sales/Purchase Analysis
- ✓ Debt Chasing and other letters
- ✓ Aged Debt Analysis
- ✓ Statements (User Definable)
- ✓ Re-Occurring Transactions
- ✓ Receipt/Payment/Refund & Contra Processing
- ✓ Invoice Search Facility
- ✓ RISCOS multi-tasking
- ✓ Text Editor
- ✓ Trial Balance/Quick Ratio
- ✓ VAT Return
- ✓ Profit/Loss & Balance Sheet
- ✓ Self re-building data files
- ✓ Hold transaction or Account
- ✓ Miscellaneous Accounts
- ✓ Upgradeable
- ✓ Full Support included
- ✓ Mouse or Keyboard Driven

Accounts Manager is the ultimate Archimedes Accounting system on the market today. It is not written to run under an emulator and is not ported from another machine, it simply takes full advantage of the raw power of the Archimedes and A3000 computers to ensure that the computerisation of your accounts is as simple as possible.

Accounts Manager is very simple to learn and use, data entry is clear and logical, reports are concise and to the point.

Because Accounts Manager puts you in control of your finances, it can greatly improve your cash flow, as well as perform the traditional functions such as VAT returns and Profit/Loss reports.

Priced at only £299.00 +VAT, there is really only one choice if you are serious about computerising your accounts. Contact your dealer for a demonstration TODAY.

would execute as:

```
*DIR WORD
*WORD
MODE 128
LOAD "DEMO"
```

Parameters can be repeated as many times as necessary in the EXEC file. Should a parameter be used in the EXEC file which has not been defined after BATCH then a 'No such parameter' error is produced and all following parameters are ignored.

The program is split into four sections, identified by the labels batch, copy, setvars1 and doexec. copy is a simple routine which copies the rest of the command line after the *BATCH into memory at &C00 onwards.

Setvars1 goes through the command line at &C00 and replaces the commas with &0D except for those which are followed by another comma.

If they are, then the second comma is removed by shifting

the rest of the line. While replacing the commas, the routine stores the address of the parameter in the two-byte array starting at vars. The next routine, doexec copies the filename on to the end of the EXEC string and ends it in &0D. readchr replaces the OSBGET routine.

It checks to see if the byte flag is zero. If it is then it calls the old BGET and if it isn't a %, then it passes back to the EXEC routine. If it is a %, it then reads the next byte.

If the following byte is also a % then it passes this back to the EXEC routine, otherwise it subtracts &30 (the Ascii code for the zero character) and if the result is negative it produces an error.

It then checks that the result is less than 10, doubles it and uses it as a pointer to get the appropriate parameter address from the vars array.

It then sets the flag byte to 1

and gets the first byte of the parameter, which it returns to EXEC.

It then checks the next byte to see if it is &0D. If so, then flag is decremented by one (making it 0). It keeps doing this until flag equals 0.

This routine also checks the carry flag each time BGET is called and if set it will reset the BGET vector to its old value. batch is the main routine. It calls copy, setvars1 and doexec and then sends EXEC filename to the CLI.

It does this before changing the BGET vector so that if a 'File not found' error occurs, the vector is not changed.

It then changes the BGET vector to point to the new routine. The program is not re-entrant, so you cannot call BATCH within a BATCH file.

It also uses pages &900, &A00, and &C00 which won't cause any problems, provided you don't

intend to use defined characters, the serial port or Econet.

£5 WORDWISE PLUS CALENDAR

David Cooper from Oxford found that none of his relatives gave him a calendar for Christmas this year, and so was forced to think about how to repair their omission himself.

It seemed that the Wordwise programming language might be just the job, and so he set about writing the program to perform the task, found in this month's yellow pages.

The language is a bit lacking in several respects - no MIDS function in a text processing language, for instance, is incomprehensible.

In the case of the calendar generator, CALEN, the lack of an array feature is a particular handicap, which makes it rather long-winded for keeping track

Government & Educational Orders Welcome.

HINTS & TIPS

of days of the week and months.

The program can generate calendars from the beginning of any month to the end of that year. You can start each month on a new page, or separate them with a line of stars, and progress is shown on screen.

In use the program must be

loaded into a segment. When run, it writes a *Wordwise* document, including embedded commands, into the main text area. It may then be printed out and/or saved to disc.

On a BBC Master, with PAGE set to &E00, there is plenty of room for the document in the

main text area, provided that there is relatively little in any of the other segments. It should cope on a disc-based BBC B if PAGE is first lowered to &1100.

The program could be shortened using the abbreviated keywords described in *BAU* March 1989, but you may like to do that yourself.

Most of the program listing is fairly obvious, but a few explanations may be in order. L% is a variable which is set to 1 when the year is a leap year. Otherwise it is set to zero. S% is the day of the week (Sunday is 1) of the first day of the first month generated.

For simplicity in calculating these, only years after 1900 are allowed, but they may be entered in full, or as two digits, as 1900 is automatically added.

The program sets the printer to double width printing using Epson codes, (although of

course these may be altered if your printer is not Epson-compatible), and heads each month's calendar with the month and the year. On David's printer, the Centronics GLP, the green and white codes come out as IB and IG respectively.

Of course it would have been much easier and quicker to write the program in ordinary Basic, which has already been done many times, but nevertheless, this is a good example.

£5 ENDLESS VIEW PRINTING

Here is a quick tip from David Arnold at Warleigh School, to print a *View* document endlessly, until you press ESCAPE.

This is useful for multiple copies of documents, but really comes into its own if you are just printing, for instance, a label, and wish to use *View* to set it up, program a function key

Quality Products for the BBC Micro

PRINTER SWITCH-BOXES

These high quality 3 and 4 way printer switch boxes are ideal for use in schools and colleges. The switch is extremely cost-effective. It will allow up to four computers to share just one printer by simply pressing a button. All versions come complete with cables. The PS4/7 boxes have 2 x 3.7m + 2 x 1.7m + 0.4m to the printer, the PS3/6 have same but only 1 x 3.7m. Data buffers are fitted to the extra long 3.7m cables to give reliable data transfer.

PS3 3 BBCs to 1 Printer £59.50
PS4 4 BBCs to 1 Printer £69.50
PS6 3 Archimedes to 1 Printer £67.50
PS7 4 Archimedes to 1 Printer £77.50

This quality switch box is designed for the Archimedes / A3000 range of computers and IBM PC compatibles. The ribbon cables supplied are 2 x 1.5m + 0.4m to the printer. The unit can also be used with a parallel plotter.

PS5 2 Archimedes to 1 Printer £34.50

These useful switch boxes are ideal for use in the office or at school. No need to keep swapping cables over just press the button! The cables supplied are 2 x 1.7m + 0.4m with appropriate connectors fitted. Both version may be used with a plotter if required. Super value.

PS1 2 BBCs to 1 Printer ... £31.50
PS2 1 BBC to 2 Printers ... £31.50

32K RAM MODULE

Store all your ROMs on disc then load them into the RAM module as and when required. Plugs into just one sideways ROM slot giving two separate 16K banks. Complete with write switch software on 40 or 80 track disc plus full documentation.

RM2 32K RAM module £25.95

The Weather Reporter

The Weather Reporter is a fully automatic weather station which continuously records wind speed, wind direction, temperature, hours of sunshine, hours of daylight and rainfall. It is accurate, easy to install, robust, vandal-proof and needs no maintenance.

The Weather Reporter does not need to be permanently connected to a computer. It will record the weather unattended even through weekends and school holidays. The data collected can then be downloaded and investigated using a simple serial lead and the supplied user-friendly software available for BBC, Nimbus or Archimedes/BBC A3000. It can also be exported for use with *Oriel*, *Quest*, *Grass* or *Key*. The complete *Weather Reporter* package, hardware and software, costs only £295 (exc. VAT).

To order or for more information, contact:

Advisory Unit for Microtechnology in Education,
Endymion Road,
Hatfield,
Herts.
AL10 8AU
Tel. 0707 265443
Fax. 0707 273651
BT Gold 87:CBL001

from the command screen as follows:

```
*KEY0 PRINT |M*FX138,
0, 128|M
```

If you want to repeatedly print a file, the command is

```
*KEY0 PRINT filename
M*FX138, 0, 128|M
```

Note that if you're setting up label printing in *View*, and repeating a single label, you should either turn off the page feed mechanism, - ie, PB off - or use control codes to set the form feed length of the printer to the length of a label.

This technique of putting a command onto function key 0, and then adding the *FX138,0,128 command on the key as well will endlessly repeat almost any command in any package.

It works because the *FX command inserts the code for function key 0 into the keyboard buffer, repeatedly simulating pressing of the key.

£5 PRINTING ON THE CANON BJ-10e

Mr D Buckley from Harrow writes that he has recently bought a Canon BJ-10e Bubblejet printer to work with his Master 128 and *Interword*.

Immediately, he ran into the problem of printing a ' ' sign, as it seems that the latest design of printers cannot be switched to different country/language fonts as could the older dot-matrix machines.

However, after about half an hour with the manual, and experimenting with *Interword*, the problem was solved. The ' ' sign is character 156 on some of the character sets that this printer can produce (and all IBM-compatible printers).

By setting dip switch 5 to ON, the printer can be made to print characters in the code range 128-255. Two sets of extra char-

acters are available depending on the setting of dip switch 9, which switches between two code pages.

The printer prints a ' ' sign, and for that matter, any other character with a code of 128 or above, via the Embedded Command Menu (f1). This is particularly useful for printing accented letters and symbols.

By entering the decimal number of the character at its position within the text, the printer prints the correct letter.

However, there is also a snag with this method - the character within the text will also be printed! To ensure double letters - the accented letter and the text letter - aren't printed, a backspace code was added to the embedded command.

For example, say that an accented 'a' is required. Type 'a' in the text, and enter 131,8 in the embedded command menu.

The printed result - à - looks slightly bold as the letter has been printed twice, but the end result is correct. Another way is to use the default pad character and embed the command over it in the same way.

This method produces a character which has only been printed once as the backspace code produces a space. For symbols which do not have a keyboard equivalent, this is the better method. The tip applies to the BJ-10e, and to any other IBM-compatible, as opposed to Epson-compatible printers.

Many printers today are IBM/Epson switchable, and you may want to leave the printer in IBM mode for other reasons. The problem is less severe in *Wordwise* where the command DP156 is all you need. Similarly, in *View*, the pound sign can be defined directly when the printer driver is defined.

DEATH BEFORE DISHONOUR

Whether you're lost in space, or just spaced out, you'll find you've got a battle on your hands with this exciting game for the Arc from **DAVID RADFORD**

After having a few drinks too many at a seedy bar on a mining asteroid somewhere in the belt between Mars and Jupiter, you accidentally slosh your beer over a giant from the Mars colony. Unfortunately, like everyone from Mars he has a very quick temper and treats it as a personal insult. He challenges you to a duel to the death in J-27 mining ships to satisfy his honour. Being more than slightly tipsy, you foolishly agree.

The game is fairly simple to play. The first player to reach 10 kills is the winner. Try not to crash into the sun, and remember that ships and bullets leaving one side of the screen reappear on the opposite side. Each player starts with 32 bullets and 32 units of fuel.

The game needs 160K of screen memory – a 'bad mode' error will be produced if there isn't enough.

I won't go into too much detail about

how the program is put together – you'll learn more by working through it yourself. Instead, I'll concentrate on the ideas that went into it.

Due to the nature of the graphics used, it is quicker and easier to completely redraw the screen every frame. To stop flickering during the process I have made use of bank switching. This is a process involving two 'banks' of screen memory. One of these is displayed while the other is being redrawn, then the banks are swapped over, so that the hidden bank becomes displayed and the previously visible screen is hidden while it's being redrawn.

The first thing to be drawn in each frame is the background of stars. It's surprising how empty

the display looks without them. The effect is produced very simply by plotting 100 points on the screen at predetermined positions. The special effect at the beginning of a game where the stars zoom out of the centre of the screen is produced by altering the positions slightly for several frames.

Incidentally, all the graphics routines are custom written and don't use the VDU drivers at all. Instead they write directly to the screen memory. This is not good practice, but it was essential to get the game running smoothly. There are four of these routines embedded in the program: one to clear the screen and draw the headings, one to plot points, one to draw lines, and one to draw text in either normal or double size. Routines such as these are not recommended, but are generally alright as long as you always use OS_ReadVduVariables to find the start of screen memory.

This call uses two parameter blocks to pass information. The one pointed to by R0 on entry consists of a list of the VDU variables to be examined, followed by -1 to terminate. The two values we're interested in are 148 and 149, which are the start addresses of the banks of screen memory. The first value gives the address of the screen bank currently being accessed by the VDU drivers, and 149 returns the address of the bank being displayed.

The values are returned in a block pointed to by R1 on entry, and they are listed in the same order as they were in the variable list.

The program works in mode 12, so each bank is 80K long (&14000 bytes). The display consists of 256 lines, each using 320 bytes, and are arranged in memory from the top of the screen to the bottom. Each pixel requires four bits of information, so one byte contains information on two pixels, the left-most being held in the least significant nibble.

The formula for calculating the screen address of any point on the screen is: $\text{base} + 320y + (x \text{ DIV } 2)$, where $0 \leq x < 640$ and $0 \leq y < 256$. 'Base' refers to the screen start address, and y is measured from the top of the screen, not the bottom. This formula only gives you an address for a pair of pixels. If x is even, then the pixel you want is held in the bottom nibble, otherwise it's in the top four bits.

The graphics for the ships are very simple. Basically, the data for each ship consists of five points. These points are connected together by lines, which form the outline of the ship. The ship can be turned by rotating all the points around an imaginary centre. The formula for rotating a point is:

$$\begin{aligned} v &= x * \cos(-a) - y * \sin(-a) \\ w &= x * \sin(-a) + y * \cos(-a) \end{aligned}$$

where 'a' is the angle by which to rotate the point, and v and w are the new co-ordinates. All the co-ordinates are relative to the centre of rotation.

To save on huge sine and cosine look-up tables, I have relied on three facts to shorten them: $\sin(-a) = -\sin(a)$, $\cos(-a) = \cos(a)$, and $\cos(a) = \sin(a+90)$. The first two remove the need for including negative angles, which would be needed for rotation (see above). The third rule means that you only need one table of 360+90 entries instead of two tables of 360 entries. This saves on memory and reduces table building time.

There is an entry in the table for each possible angle. Each entry is one word long. The word is actually the real value multiplied by 4096 and rounded down. This gives adequate precision for most purposes using sine and cosine. When you use the table for multiplication you have to remember to divide the result by 4096 to get the correct result.

One problem I had while writing this game was to do with this very table. The program uses the variables ang1 or ang2 to keep track of the direction the ship is facing. For every frame, a copy of the data for the ship is made and then rotated to this angle, before being drawn. The original program didn't use a copy, so turning right involved rotating the ship data by 10 degrees. This led to loss of accuracy and severe distortions.

Another important use of the sine and cosine table is with the movement routines. These routines use vectors, and sine and cosine can be used to calculate a vector for a given angle and magnitude using the following formulae:

$$\begin{aligned} x &= r * \sin(a) \\ y &= r * \cos(a) \end{aligned}$$

In this case 'r' is the magnitude and 'a' is the angle. (By the way, this can also be used to find a point on a circle of a given radius using the angle of the point from the centre. In this case, 'r' is the radius, and x and y are the co-ordinates of the point in relation to the centre of the circle.)

The magnitude of the vector controls the distance the object moves in every frame, and so directly controls its speed. However, each time the vector is changed (for instance, a ship thrusting in another direction) the old vector has to be taken into consideration, otherwise the ships would be capable of instantaneous changes in direction. In addition, some form of deceleration is also needed. The amended formulae look like this:

$$\begin{aligned} x &= x - x/32 + r * \sin(a) \\ y &= y - y/32 + r * \cos(a) \end{aligned}$$

The first parts cover the deceleration, where a small fraction of the old value is subtracted, reducing the magnitude of the vector by a small amount. On top of that is

added the new vector, so that it eventually replaces the old one. This last procedure is also responsible for the acceleration process. The method probably doesn't entirely obey the laws of physics, but it's fast, simple and gives good results, so who cares! After all, this is supposed to be a game, not a serious simulation!

The deceleration can be altered if you fancy a challenge. The variable `airres%` is set to five near the start of the program. The lower the value, the faster the deceleration. In fact, most of the variables defined at the start can be altered to give an easier or harder game. For instance, `maxfuel%` is the initial amount of fuel you start a game with, but bear in mind that it is actually the number of units multiplied by 16.

If you don't find the game hard enough, try altering `maxshi%` to five at the start of the program. This will give you five units of shield, each of which can absorb one bullet. This makes killing your opponent more difficult. Once your shields are reduced to zero, you're vulnerable – in fact you've had it!

MultiFS

Version 1.10 now available

MultiFS provides the Archimedes with multiple filing system support. This filter allows the user to read and write to non standard Archimedes discs from within the desktop environment. Current formats supported :

☐ MS-DOS ☐ Atari DOS ☐ BBC DFS

MultiFS Features
True RISC-OS filter
Provides access to DOS partitions
Filetypes maintained on DOS discs
Format and create system discs
Supports disc names for DOS

MultiFS is available now priced at only £36 inc. VAT and postage.
Site licences are available, contact us for further details.

UNIVERSAL TELETEXT ADAPTOR

- * RISC-OS version multitasks.
- * Computer controlled tuning.
- * Download and save pages.
- * User programmable via SWIs & OS calls.
- * Unique composite video & audio output.
- * High performance T.V. front end.
- * Fully mains powered unit in metal case.
- * Upgrades available for existing users.

The ARC/A3000 version contains many powerful features making it very easy to use, i.e. point and click at page numbers. SAE for full details.

Prices include: -

User port lead
TTX V1.08 S/ware
User notes.

BRANCHING OUT

MAXINE MC COY treks down the charity that will soon bring rainforests to the classroom

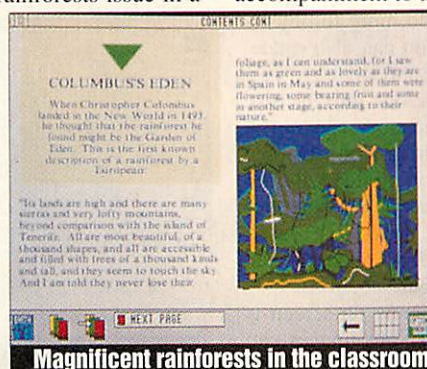

Educational databases are becoming increasingly popular as teachers recognise their benefits. All kinds of material can be collected, organised, cross-referenced and presented in an attractive format.

Living Earth, an environmental charity which concentrates on education, previously highlighted the rainforests issue in a schools resource pack. Following its success, a database seemed the next logical step.

Project Director Niall Marriott sees the database as fulfilling three aims: firstly, to educate young people about rainforests and make learning fun; secondly, to provide

cross-curricular support for the teaching of environmental issues; and finally, to keep pupils up-to-date with rainforest activity.

Living Earth is now aiming to recruit enthusiastic computer graphics artists to help illustrate the database. Their task will be to create the magnificence of tropical forests onscreen, to provide a graphical accompaniment to the facts.

Magnificent rainforests in the classroom

With only seven full-time staff, collection of the data to populate the database was an immense task. It was carried out almost singlehandedly by Rupert Booth, Chief Editorial Consultant to the project, who analysed books, newspapers and

scientific journals for relevant information.

Although Living Earth has tried to make the database as attractive to children as possible, the addition of further graphics should make it an inviting package that is easy to get to grips with. The information is arranged under four main categories; ecology; importance and use of forests; people; and deforestation issues.

Each of these main headings has eight sub-headings, allowing access to related information in the form of text, maps, diagrams and illustrations. A 'walk through the forest' can be planned to follow a specific route.

Eventually Living Earth will produce two versions of the database, for eight-13 and 14-18 age groups.

Conscious of cost, Living Earth has tried to keep memory use to a minimum and the finished product will consist of one creator and three other discs. Information will be arranged in pages on the database, and it will be the task of the volunteer designers to create visually appealing graphics to complement the text.

The graphics created will incorporate digitised sound. There will be some sprite work and limited use of scanned photographs. Images will range from space-filling motifs to technical diagrams illustrating, for example, a cross-section of trees in the forest. Pages will depict not only trees, but also other plant, animal and bird life.

Pupils will be able to extract information and, via a page linker, create files and reports of their own. The creator disc will be interactive, allowing the addition of other information, as situations change, or for an inter-related project.

Fittingly, Acorn has donated two computers to the project, an A440 and an A3000, plus a small amount of money to bring the project up to Risc OS standard.

On completion, the database will operate under the windows environment, taking advantage of the multi-tasking features of the Archimedes. Versions will also be available for the BBC B/Master.

Although the price has not yet been finalised, Living Earth expects it to be around £35 - £45.

If you are interested in contributing your graphics expertise to the project, then Living Earth would like to hear from you. Practical knowledge of the Archimedes/A3000 is a must. Contact Niall Marriott, Living Earth, Upper Grosvenor Street, W1. Tel: 071-499 0858.

Limited funds mean that the charity is unable to offer payment, and is aiming to recruit volunteers on the basis of travel expenses and acknowledgment of their input. People able to provide their own machines, or even donate equipment (a colour printer) are also welcome.

DRAWING THE LINE

The A3000 starter pack

The A3000 is a powerful machine, but before you can harness that power, you need to understand the applications. Our series continues by looking at the applications discs

Every A3000 is supplied with two Risc OS welcome discs which contain a variety of applications to run on the machine. The three major applications supplied on the discs are:

- !Paint, a painting program
- !Edit, a wordprocessor and text editor
- !Draw, an object orientated drawing application

Using !Draw

!Draw is an invaluable application which can be used for anything from creating disc labels to writing stylish letters.

It consists of a set of tools used for drawing images on screen, in the same way as you might draw onto sheets of transparent paper.

Each time you draw a shape, it is put on its own, onto a fresh sheet of paper. Because these sheets are transparent you can see all of the 'objects' building up in layers, making up a picture. Now imagine you want to move one or some of these 'objects'. You would grab, or 'select' the sheet(s) of paper containing the selected objects which can then be moved around. That is what an object orientated drawing package is about.

Of course, you can do more to objects than just move them. You can also rotate, magnify, reduce, colour, and so on.

Insert application disc one into the disc drive and bring up its directory viewer (by clicking on the floppy drive icon). Double click on the !Draw icon to load it into memory and then close the directory viewer, leaving a blank desktop. To activate the application, click once on the !Draw icon on the icon bar.

The !Draw window now on screen is basically the canvas that your images can be created upon. To see all of it you will

need to reduce its apparent size – but more about that later.

Tool boxes

The panel on the left-hand side of the window is the toolbox. In Risc OS, menus (accessed from the Menu button) are used to select functions. But this involves going through several submenus, which is time consuming, especially when you use those functions often.

The toolbox combats this time wasting by providing the most used functions in icon form, so instead of clicking on the Menu button and trailing through various submenus, just one click on a tool in the toolbox will do.

To see this in operation, click on the top (line) icon. Now press the Menu button over the !Draw window and move down and over the Enter submenu arrow – notice that the Line option is ticked. Now click on the Curve tool (the third icon down) and take another look at the Enter

The initial !Draw window

Stretching out the first line

Finishing the object

Selecting the object

Re-sizing the object

submenu – the Curve option is now ticked, emphasising the fact that this toolbox is a graphical form of part of the menu. You can even turn the toolbox on and off by clicking on the Toolbox option in the main (root) !Draw menu.

Click on the Toggle size icon (top right) to make the !Draw window occupy the whole screen. Notice that even now you can't see all of the page.

Drawing paths

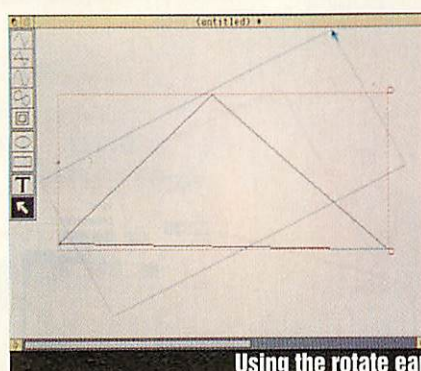

Now you can start to experiment by drawing a shape – for example, a triangle. Click on the Straight line icon at the top of the toolbox (if it is not there, turn it back on by pressing the Menu button and clicking on the toolbox).

Move the pointer back over the main window – notice that it changes to a cross shape. Click Select once to tell !Draw where you wish to start your line, move the pointer and stretch the line out from this starting point. Move the pointer so the line is roughly diagonal and click Select again. This is the first line in a 'path'.

Move the pointer in another direction and press Select again, and to complete the triangle, move back over the start and press Select once more. Tell !Draw that you have finished your 'path' by clicking Adjust followed by Select.

You can now have some fun with the triangle. By choosing the Selection icon (the arrow at the bottom of the toolbox) you can pick objects by clicking on them with Select. Click over the triangle and it will be edged by a red 'bounding box'.

Holding Select inside this box allows you to drag it around, moving the transparent sheet the triangle is drawn upon. Releasing Select places the object at its new position.

Using the rotate ear

Copying the selected object

The two small squares on the bounding box, called 'ears', allow you to rotate (upper ear) and re-size (lower ear) the shape. To re-size, hold down Select inside the lower ear and move the mouse. Releasing the Select button re-sizes the triangle to the new bounding box. The rotate ear operates in a similar way, allowing you to rotate the triangle.

The ear functions are also repeated within the !Draw menus – in the Select submenu. There they are titled Rotate, X-Scale and Y-Scale. However, using the ears is much easier.

Ensure that the triangle is selected and then go onto the Select submenu and choose Copy. The selected object is copied, so now you have two triangles. Try selecting both of these: use Select for the first and Adjust for the second (it is important to remember that the Adjust button is used to select multiple objects).

Notice that, when you have both triangles selected, any operation on one is duplicated on the other. This is always the case, even when you have 20 items selected. Double clicking will also select the object underneath the object you are clicking on, and more double clicks move you further down the transparent sheets.

Now, delete just one of the triangles by selecting it and choosing Delete from the Select menu.

Styles

Objects can also have styles, chosen from the Style menu. Select your triangle and then move to the Style submenu.

Go onto the Line width submenu and click on Four. You have just told !Draw to draw a triangle with lines that are four units wide. Try this with other units (using Adjust on the menu so that it doesn't

close). At the very bottom is an 'editable field' where you can type in custom widths not shown on the menu.

You can also alter the colour that the lines are drawn in. Move over the Line colour submenu in the Style menu. You will see a box of colours and three sliders – you can choose a colour from the box by clicking on it and then clicking OK.

Alternatively, you can use the sliders, which you will recognise from the palette application, to mix your own colours.

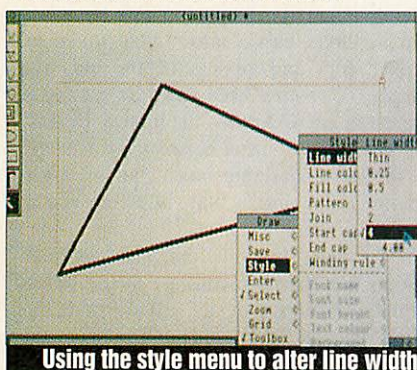

Your new colour will be number 17, there are only 16 colours in mode 12, so using the sliders is only really effective in 256 colour modes, like mode 15.

You can also fill the triangle with a colour using the Fill colour dialogue box. At the moment it is None, so the triangle is transparent. However, by clicking on a colour and then OK you can change this in the same way as you did the line colour.

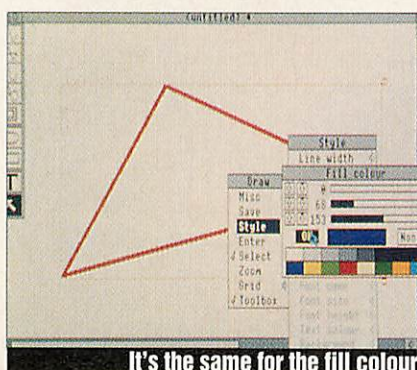

Line pattern allows you to choose whether the line is solid or dashed.

Picking a colour for the line

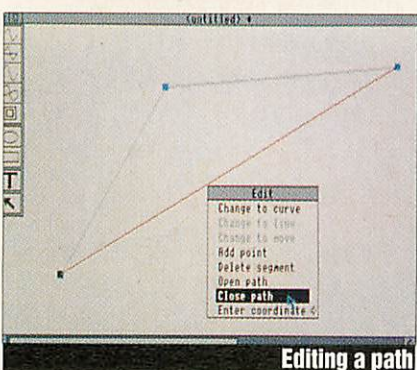

Using the style menu to alter line width

It's the same for the fill colour

Choosing the line pattern

Editing a path

Editing paths

To alter your path, select the triangle, then choose Edit from the Select menu, (this can also be done by clicking on the top tool icon and clicking Adjust over the object). !Draw then shows the triangle with 'grab handles'. If you press Adjust over one of these handles, it will turn red, as will the line that precedes it. Move this point by dragging with Adjust.

This path is an 'open path', ie, there are two points that have only one line connected to them (the beginning and end points). Select the last line in the path so that it turns red. Now press the Menu button to reveal the Path edit menu, which only appears when you are editing a path. Close the path by selecting Close path. Now your triangle is a real triangle.

To make it into a square, click on the Menu button again and choose Add point – this places a new grab handle half way along the red line which can also be moved around by dragging with Adjust.

You should always use closed paths when drawing shapes. The second icon down automatically closes paths when you have finished drawing – select it and then draw two lines and press Adjust. Notice that you need not draw a third line – !Draw does this for you and joins up the first and last points.

Curves

Now let's move onto curves. Delete both triangles by choosing Select all, then Delete from the select menu. (It's much quicker to choose Select all with the Adjust button and then Delete with the Select button).

!Draw deals with Bezier curves. A Bezier curve has a start, an end and two control points. To draw such a curve, click on the third icon down and draw just one line, ie, press Select, drag the line, press Select again, then press Adjust.

This new line has four grab handles: two blue ones, which have the same function as before and two yellow ones which alter the curve. It's best to learn how these handles work yourself. You can do this by playing with them to discover how they affect the shape of the curve. There are some complicated mathematics involved.

Curves have the same properties as lines, and can be put into paths, given styles, etc. You can even mix the two in a path by clicking on the relevant icons as you draw.

The fourth icon down is the Curve auto close icon (the same as the second icon down but with curves) and the fifth icon down is the Move icon.

To see the effect of the Move icon, first draw a line (without pressing Adjust afterwards – you want to carry on this path!),

select the Move icon, place the move point somewhere and then select the curve icon and draw a curve, pressing Adjust to finish your path. This path is one object (try selecting it) but it has a move in it, just like a line that you can't see.

Other functions

Those are the basic principles of !Draw – now for the less obvious functions.

Under the Misc submenu is New view, which brings up another view of your picture. Select it and draw a line to really prove that !Draw really can do two things at once! You can have up to eight new views at a time, although more than three isn't really useful.

Paper limits allows you to choose the size and orientation of the paper you are drawing onto. Sizes range from A5 through A4 (the size of this page) to A0. A4 is the best option (unless you have a wide carriage printer).

When you have the Show option ticked with a printer driver installed, !Draw will place grey borders on the page so that you will know if the complete drawing will be printed out and not cropped to your printer's page size. The grey is the area near the edge of the paper where the printer cannot reach.

A printer driver is an application that controls your printer. It can take a file from any program and print it in the correct way, clever eh?

There are three types supplied.

- !PrinterDM for dot-matrix printer
- !PrinterPS for Postscript laser printers
- !PrinterIX for an Integrex Colourjet

Load the driver for your printer by double clicking on its icon. It will now sit, waiting, on the left-hand side of the icon bar (it's on the left because it represents a physical device, a peripheral).

Press Select over the icon and a dialogue box will appear. If you click on the printer box (at the top), you can choose your printer type and the resolution that you wish it to print at. Clicking Menu over the icon and choosing Save choices stores your configuration on disc so you needn't repeat this every time.

Now when you choose to print, and your printer is ready, you can obtain a hard copy of your picture.

There'll be more on printer drivers in a later issue. For now, it's back to !Draw.

The Save submenu allows you to save your picture permanently. First of all open a directory viewer on a blank disc. Now draw a picture and then move over the Save and then File submenus. Press CTRL-U to delete the standard filename and type in the name of your drawing, eg, MyPic. Then drag the drawfile icon above the filename onto the directory viewer. If you can't see the directory viewer, rearrange

A Bezier curve, showing control points

Many objects, making a complex picture

!Draw can be used for designing clipart...

...and admiring it

The impossible is possible with !Draw

the windows before saving, perhaps sending the !Draw window to the back.

To reload your drawfile later, either double click on it or drag it onto the !Draw icon on the icon bar.

The Style menu I have explained in enough detail for the moment. This leaves the Zoom and the Grid submenus.

The Zoom menu allows you to change the apparent size of your picture. It is in ratio form, so if you make it 2:1 your picture will appear twice as big – useful for fine adjustments. At 1:2 it will be half size, so you can see more of the paper at one time. Used in conjunction with the New view option you can zoom the second view down very small so that you can see your picture building up without having to zoom up and down in the main window.

The Grid option allows you to place a grid over the paper. You can lock to this, ie, when you move the pointer it will only visit the points of the grid and not in between them.

To set up the grid go over onto the Grid submenu and click on Show and then Lock. Use the Adjust button for Show and Select for lock.

The grid can also be of any dimensions and have any number of subdivisions. For instance, to make it metric, just click on the Cm option. The Cm or Inch submenu allows you to alter the space between grid dots and the number of subdivisions between them.

Next month the series continues with a look at sprites, which are created with !Paint. If you have any questions, send them to the usual address. Mark your envelope 'First Steps'. We will publish them, with answers, in a later issue.

ACROSS THE DIVIDE

IAN WILSON illustrates
the means of
transferring data
from your Psion
Organiser to your
Archimedes

The Psion Organiser is often seen as just a rather flashy Filofax. In fact, it is a very powerful computer, the equal of any eight-bit machine.

The advantages of its pocket size are obvious, but certain disadvantages become apparent as you start using it. Worst of all is the strange shape your jacket becomes when you try to carry a keyboard, disc drive and colour monitor in your top pocket. A solution to this problem is to do editing and backing-up on your Archimedes, and leave that at home.

The next step, then, is to join up the two machines. The Psion Comms Link is a device which plugs into the top of the Psion Organiser, has a serial cable terminating in a 25-pin female D connector (more about that later) attached to it and has software on Rom for data transfer at the Organiser end.

```
!Boot
| !Boot file for PSION | BBC

Run <PSION$Dir>.!RunImage
Menu
^Psion menblk% Import! !saver%
Info linfo% Quit \fin ~
```

The Script files !Boot, !Run and !Menu

It is supplied on a floppy disc with the required software for your main computer – provided it is a PC. So, if you own a proper computer (ie, an Archimedes) and wish to use it with the Psion, you need another software package.

Data transfer between computers is often a very clumsy affair, and available commercial software for Arc to Psion transfer is no exception. The Risc OS desktop is a very friendly user interface and seems to be the ideal place to tidy up this process.

The *Psion File Transfer* program (*PFT*) listed on the yellow pages can be used to transfer Psion data or procedure files directly into a filing system directory or text editing application window, simply by dragging its icon to the required destination. The reverse is equally easy and is performed by dragging the icon back to the icon bar.

With this program, you can make your Arc do the dirty work for the Organiser. You can write datafiles or procedures in a suitable text editor or wordprocessor or send text from the Organiser to a printer.

The Psion Organiser's own backup system uses Eproms which plug neatly into its back. These are expensive and can only be written to once until they are reformatted so that editing data on a datapack uses up its available memory.

An alternative, offered by Psion, is the Rampack, but this is notoriously temperamental. Therefore backing-up to Archimedes disc has tremendous advantages.

As I have said, the Comms Link is equipped with a 25-pin female D serial connector. The Archimedes serial port is nine-pin male. Therefore an adaptor is required. Unfortunately 'off the peg' adaptors do not work, so you need to dust off that soldering iron. The connections are as in figure 1.

If you are using an A3000 you must have a serial upgrade. It is important to plug everything in before switching anything on, especially if a Rampack is anywhere near your Organiser! If you haven't got the *BAU* monthly disc, start typing in the program.*

First create an application directory named !Psion and into this directory save the six files needed for the program. !Boot and !Run are obey files written using !Edit. The Menu file is also written in !Edit, this time

as a plain text file. The files Templates and !Sprites were originally created in !FormEd and !Paint respectively.

Type in and run the programs *MakeSpr* and *MakeTpl* and save the files produced in the !Psion directory. Finally, type in and save the program !RunImage in the application directory.

Before starting to transfer files, it is necessary to set up the communications parameters for both computers. I find that the program works best at a baud rate of 4800, but both computers are capable of 9600 and if your soldering is better than mine, you may get good results at the faster rate.

Set up the Psion as in table 1, the Comms Link manual will tell you how to do this. On the Arc, enter the command line and type *CONFIGURE baud 6 [RETURN] and *CONFIGURE data 5 [RETURN] and then a CTRL-BREAK. Now everything is ready.

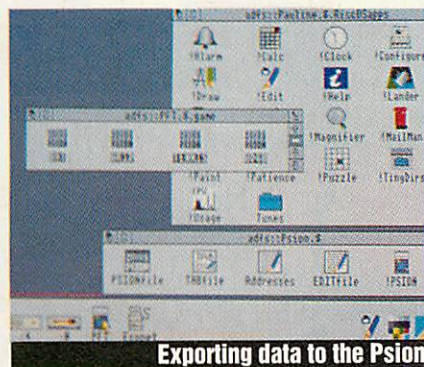

If you are familiar with the Risc OS desktop, you will have no trouble using *PFT*. To load the program, double click on the !Psion icon in its directory window and the icon will install itself on the left-hand side of the icon bar. Clicking on Menu over the icon discloses a small menu whose first option, Import, leads to a dialogue box.

From here you can drag the Psion file icon to a directory, an application window or a printer driver icon and then send the file from the Psion Organiser. Three different file formats are possible and are selected by clicking the appropriate radio button.

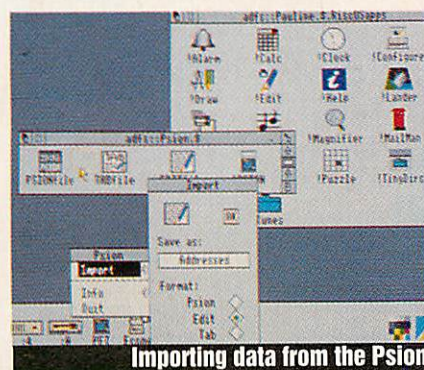

Psion format is, as you would expect, a pure copy of the Ascii codes sent by the Psion. Edit format removes all control codes except for linefeed and the file is organised so that a new line separates each field, and two lines separate each record. This is the most convenient way of using !Edit to edit the file. TAB format is similar but TAB characters now separate the fields, and a new line denotes a new record.

This is probably the most useful format as it can be imported to, say, *Pipedream* which then sorts each field into columns. Organiser Programming Language (OPL) procedures are not significantly altered, as they do not contain control codes except CHR\$(&1A) at the end of the file.

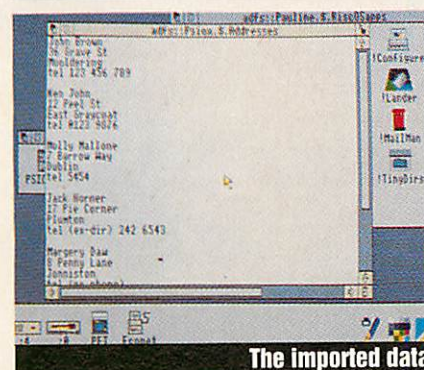

Transferring the files back to the Organiser

Exporting data to the Psion

Importing data from the Psion

The imported data

Fig1. Arc to Psion Comms link

is a piece of cake. Set the Organiser to receive and then drag the icon of the file you wish to transfer to the *PFT* icon on the icon bar. It may originate from a directory or an application. *PFT* is quite intelligent here and examines the outgoing file for features of an OPL procedure and for the presence or absence of TAB characters. It then makes the necessary adjustments to the file as it is sent to the serial port.

This program is based on the *BAU* Risc OS *Skeleton* published in the March 1990 issue of *BBC Acorn User*. The *Skeleton* program does not include proper Risc OS save and load routines and so these had to be designed. Message passing between applications is an essential feature of Risc OS multi-tasking and is not quite as complicated as it first appears. At the end of a dragging operation, the destination tasks handle is determined by "Wimp_GetPointerInfo" and a message sent to that task using "Wimp_SendMessage". The reply to this message contains the proposed pathname to save the file and is received in the Wimp Poll.

Once the file is saved, your task sends another message to the same destination, informing the other task that the file is saved. The importance of this second message is that if the destination task is not the filer, it may load the so called scrap file and then delete it. The external task, for completeness, must then inform your task that it has done so.

The programmer's reference manual explains in detail the parameters passed to "Wimp_SendMessage". The scrap file rejoices in the system variable name "wimp\$scrap" which is set by the *!System* application and is located in the *!System* directory.

Another method of transferring data between applications is copying blocks of Ram from one task to another. This is obviously much faster than using a scrap file, but cannot be used by *PFT* because a file coming from the serial port is of uncertain size.

Reading data from the serial port is made easy by using the system device serial: which can be opened for input like any other file. So, *PFT* reads the serial port, byte by byte, and after calling *FNfilter* it writes to the destination file.

The effect of *FNfilter* depends on which for-

```

Table 1. Psion setup values

mat is selected by the user. Writing to the serial port is equally easy.

The difficult bit is 'unfiltering' the data as it must be automatically translated to Psion format whatever format it begins as. *FNfilter* looks for a colon in the first line of the file and if a colon is present, the file is assumed to be an OPL procedure. *FNget_type* detects the presence of TAB characters in the file. The outcome of these two functions determines the effect of *FNunfilter* which is called for each byte as it is sent to the serial port.

Finally, a few words about *Organiser Tennis*. Remember the good old days before *Space Invaders*, when the first silicon chips hit the arcades? That was the time to finish batting a ball against the garage door, come in from the cold and play the game in front of the living room fire.

For those of you who didn't believe that the Psion Organiser was capable of animated screen displays, here is a nostalgic little utility which brings computer Tennis to wherever you go. Ideal for whiling away those odd moments in your accountant's waiting room. Or even his office. You can do it anywhere!

On the monthly disc, there's an OPL program in four procedures. Use *PFT* to load each procedure into your Organiser, giving each file the same name as it has on the disc. Translate these procedures and add the *Tennis* option to the main menu. Use the X and SPACE keys to move the paddle and keep the ball in play.

EXILED!

SAM GREENHILL reveals the final part of the Exile solution

(54) You should now be standing somewhere near (J7) with a dormant yellow slime. Take it up and <TH>/<F> it past the switch. <PS> to open the door, and <D> on the block. <PS> to close. When the block and slime floats up, <T> to (J), and <P> the slime. Get your RCD and a piranha from (J1). Take the lot to (O1), where the big fish should be eating the piranha.
(55) <|O2><R>. Get the slime to (O6), via (O3).
(56) Push the slime through to (O7). <|O5> and <G><D> RCD so that it continually causes the door at (O8) to open. <|O6><G> the piranha, <TH> right through the crack.
(57) Immediately <T> to (O2) and <SAVE>. When the suck in the centre cave sees the piranha through the open door the coronium boulder

is sucked through the door and a trigger cell at (O9) opens the horizontal door, sucking you through too. When you are at (O9) <R>. It stops when the piranha is dead. Put the rock on the door and <|O9>. Take the rock to (J3). <SAVE>.
(58) Repeat steps (53-57) for a second boulder. If you're clever you'll make use of the stored position at (O9) to avoid the piranha business of (56) again. <SAVE>.
(59) Separately, take the two rocks to (G) making sure they never touch. <D> rock one on the rune door. <|G2><R>. Take the other to the 'island' just above (G) and <D>. <*>.
(60) Go and get the flask and Chatter. <D> flask, take Chatter to (P2). He will kill the birds. Get a flask of water to (P3) and put out the fire.
(61) <|P4><D> empty flask on the gargoyle. <|P6><P>. <|P7> and <F> the imps. <P> fire-proofing device. Destroy the teleporting robot.
(62) <|P><|Q>. <F> invisible wasps, and <PS>. This closes the door at (Q1).
(63) When you meet Teleporting Droid Two, <|K1><R><|K>. Wait for Droid, then <T>

<PS>. <|R>.
(64) <|R1> and <F> the hive to stop the suck. Locate the Blaster and <P>.
(65) <|R2><F> the imps. Get a coronium crystal then <|R3>. Note the suck that likes dormant slimes. <SAVE>.
(66) <|R4> Get a slime to <R6>. <|R3> and stand to the right of the acid drips. Use the Blaster to divert drips onto the slime.
(67) <SAVE>. <|R6><P>. With a combination of a boosted jump, <FUL><TH> up and left and <F> get the rock clear of the suck at (R3). <SAVE>. Catch it and take it to (R5). If you fail here, try again with the saved game.
(68) Repeat steps (66-67) and blow the door at (R5).
(69) <P> the mushroom immunity pill.
(70) <|Q1>, waste the imps and <|Q2>.
(71) Burn the invisible frogman at (Q3). <|Q4>.
(72) Burn some worms and <|Q5>. <P> the cannon RCD.
(73) <|R7><|S>. Burn the bats here and at (S1).

It's difficult to pick out the best of the best, but over the next few months, **PAUL JAMES** will be reviving some of the classics from the BAU eight-bit archives

BC Acorn User celebrated its hundredth birthday recently. Some of you have been reading the magazine since its birth, but a lot of you have acquired your Beebs more recently and may have missed many of the excellent eight-bit programs. Now's your chance to catch up, and a chance for you veterans to dig out your old copies and renew some of the best eight-bit programs ever written.

I begin this series with a couple of simple, but very infectious, graphics programs. I guarantee that both of them will keep you enthralled for hours on end.

The first item is a short program to generate realistic 3D images. It first appeared in the April '86 issue of *BAU*

Peter Voke's program uses some simple maths to take 3D shading routines to the limits of reality. With a few simple rules you can generate almost any shape and the program will, according to the angle of the surface, light it appropriately.

The program really only generates 2D shapes that are symmetrical about the vertical axis. This dramatically reduces the amount of maths needed, and speeds things up considerably. The three dimensional effect comes from the shading method used.

The program allows you to enter values that alter the shape of the object. There are a few supplied in figure 1, but Peter recommends that you experiment to generate more interesting objects.

To use Peter's program, first select option 1 to create a screen. Option two will preload a created screen. This allows you to create montages or more complex shapes by overlaying a plot over an already saved object.

The stone vase

The goblet

The magic urn

On selecting the Create screen option you have to enter some values that affect how the image is plotted. First comes 'fineness'. This alters the number of dots that make up an object. A fineness of one will give maximum pixel density. Using a fineness (or coarseness!) of eight will ensure the object is plotted faster, although much rougher.

The next option is the Scatter option. This will vary the 'spread' of the dots that are plotted, a higher scatter value will create a grainy effect, no scatter will give a 'sharp' image imitating glass or metal.

The next two inputs alter the size of the object in the x and y axes. A value of 100 for both means that it will occupy the whole width and height of the screen (if the formula states this), a value of 50 means it will be half size. Peter recommends that you use a value of 40 or 50 and a fineness of four for development work. For final production, values of 90 for size and a fineness of one will render the object to maximum quality.

The next two numbers, X-SHIFT and Y-SHIFT alter the position of the object on the screen. They range from -125 to +125, so for example, entering values of -100 and 0 will plot the object 100 units to the left of the centre of the screen. If both are zero the object will be central.

The next group of options tailor the shape of the object based on a simple formula. Peter's program calculates the radius at a given point by deriving it from the height of the point from the bottom of the object.

First you must choose from the three types of equation. Choosing R as a function of Y can be used to produce elegant shapes, like glasses. R squared gives somewhat rougher shapes with more pro-

nounced curves, it's the only way to generate a sphere. Peter includes R inverse as an extra function for other effects.

Peter suggests a few simple guidelines to help you in creating shapes.

Y runs from -1 at the bottom of the shape to +1 at the top. R should not go over 1. If it does, a straight side will be created, like in the magic urn. When R goes under 1 the curve is inversed, like the ball in the stem of the goblet. If you create a cylinder then you know R was out of range all the way up the object!

For images that are mirrored along their horizontal centre line ensure that the coefficients of Y and Y³ are zero, and to get a shape that has a point at the top the five coefficients must add up to zero.

Lastly, you can change the screen colours by using keys f0 to f4. Each one will cycle one of the four colours through the eight available, try it.

Pressing S will save your screen, pressing C will return you to the menu for another attempt.

Try varying the values given in table 1 by small amounts. Before long you'll have built a collection of rendered objects, either for looking at or using in artwork.

The second program this month is a stunning rendition of a lissajous curve – in fact, many lissajous curves. These pulsate and rotate with a speed that will leave you breathless.

A warning from me here, two hours is the recommended time span staring at a screen before your eyes begin to turn square.

Michael St Aubyn is the author of this little graphics gem, which first appeared in the November '85 issue. He explains that the program simulates the effect seen on oscilloscopes when the single dot is controlled by sine waves in both the x and y axes, you may have seen this effect used on programs like the *Time Tunnel* and *Lost in Space*, guess who's watching too much late night TV!

Michael explains that the program achieves the speed needed for animation by first calculating tables. These tables are then used to look up the sine for a certain value, much faster than calculating them on demand!

The animation consists of 256 dots, each one plotted separately. Unlike an oscilloscope, the previous pattern does not fade away, therefore smooth animation is achieved by first plotting the 256 dots, then plotting the next series and then

removing the old ones, ensuring that the trace is always visible.

You can affect the curve while the program is running by using a number of keys. The cursor keys change the horizontal and vertical frequency of the dots and many different curves can be created. Pressing RETURN resets the frequencies to 1 and the familiar rotating dumbbell reappears. Pressing SPACE freezes the display and shows the current frequencies in use.

These are not the only changes you can make. Michael suggests that you also fiddle with the program itself by changing certain variables. For instance:

- `phasediff` determines the phase difference between the x and y waveforms from which the pattern is composed, and this affects the rotation

- `xspeed` and `yspeed` control the velocity of the waveforms. Doubling them will double the speed of the pattern

- `xfreq` and `yfreq` set the frequency of each waveform, try setting `xfreq` to 1 and `yfreq` to 127

The program starts with the dumbbell pattern, this can be changed by changing lines 440 and 490. Michael suggests the following replacements:

```
440 x=SIN a
490 xfreq=-2:yfreq=-1
440 x=SIN(PI*SIN a)
490 xfreq=1:yfreq=1
440 x=SIN(a*A%/255)
490 xfreq=-1:yfreq=1
In the examples so far
all the y values have
been calculated by
using y=x. However
many interesting effects
can be obtained by
using different func-
tions for x and y. Try
this for instance:
440x=SIN(a*A%/255)
460y=COS(a*A%/255)
490 xfreq=-1:yfreq=1
```

There are of course many other possibilities. Functions that include trigonometry generally produce the best results, but powers, logarithms and quadratic equations are worth experimenting with.

Well that's it for this month, hope you enjoy the two programs. Look out for next month's article, what's in it? Well you'll have to wait and see...

Have you ever needed a program to do something, but weren't sure which one, or indeed if there was one, that would fit the bill? Perhaps BAU has published just what you needed.

Why not write a description of what you would like an eight-bit program to do? Then send it to us at: Pieces of Eight, BBC Acorn User, 20-26 Brunswick Place, London N1 6DJ. We might be able to help.

| Name | Red Planet | Goblet | Magic Urn | Bubbly | Wine Glass | Stone Vase |

Table1. Try these variables for interesting effects

HANDLE BARS

In the National Curriculum datahandling is paramount as far as IT is concerned. The curriculum web shown here illustrates this point. This month and next, I intend to look at two software tools designed to assist in this area: database management software and spreadsheets.

As far back as 1981 it was recognised that children often spent a great deal of time collecting data, yet relatively little time in interpreting it. The pendulum has swung the other way with the classroom computer being called upon more than ever to help children focus upon the interpretation of data. Children learning to use the classroom computer to create databases and spreadsheets as part of their project work will gradually develop an understanding of how to handle information.

The purposes for using databases in the classroom therefore are threefold:

- As a source of information to support children's project work
- As a means for helping children become effective information handlers
- As a means of supporting the role of concrete experience in learning

A principle to keep in mind is that it is not only the interrogation of information in a computer database that is valuable but also the collection, organisation and presentation of data which helps children see the value of information as a resource. Database management software is very well represented on Acorn eight-bit computers. *BBC Acorn User* has evaluated the usefulness of such programs in the past (see the February '89 and June '89 issues).

The Archimedes series is an ideal information handling environment, as speed and memory are all important for successful searching, sorting and presentation of data.

The range of database management systems for the Archimedes series is expanding rapidly at all levels with the exception of special educational needs; I am unaware of anything matching the simplicity of *List Explorer* (NCET) for example.

DataSweet is a system ideally suited for introducing primary-aged children to datahandling in the National Curriculum. It comprises an integrated suite of very simple and attractive programs representing a database manager, a spreadsheet and a gra-

phical presentation program. For anyone with doubts about the effectiveness of a Wimp environment for primary children, *DataSweet* will dispel them immediately.

The database manager is in fact three variations of the same program. *DataCard* uses keywords as an aid to searching and sorting while *DataPick* uses small, sprite pictures in place of keywords for the same purpose. *DataFind* uses the conventional method of using search strings to locate information stored in fields.

The three programs share a common attractive format which permits up to eight lines of text per record. Data can be 'dragged' from one program to the other or dropped into *DataPlot*, the graph drawing program. It produces colourful pie charts, bar charts, line bars or line graphs.

The spreadsheet, *DataCalc*, has a limited range of cells (6x20 matrix) into which files can be dragged. As each cell containing a formula is highlighted, it reveals its formula, rather than the usual end-calculation. This feature helps children to understand the workings of spreadsheets.

Each component of *DataSweet* is very limited in its scope and versatility but this is, of course, the suite's inherent strength: it introduces the principles of information handling on a computer simply and attractively and in a way that should engender confidence among primary teachers.

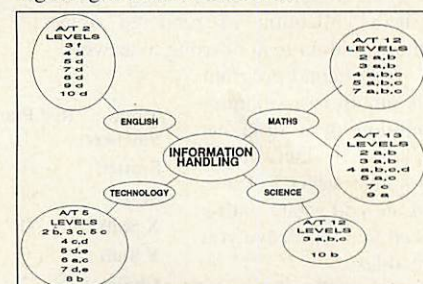

Key is undoubtedly the most popular datahandling software in British schools (close to 30,000 copies), probably due to its flexibility, affordable price tag and the substantial support provided by the ITV companies. *Key Plus*, the enhanced Archimedes' version, is a much improved version of its predecessor but maintains close links with it.

It can be run simply as a full Arc version of the original *Key*, in which converted *Key* datafiles (including *Key 128* and *Econet* versions) can be accessed, although there will be limitations with the mapping feature. The virtue of this mode of *Key Plus* is in its familiarity. But the full Risc OS windowed mode is where the power and versatility of *Key Plus* become apparent.

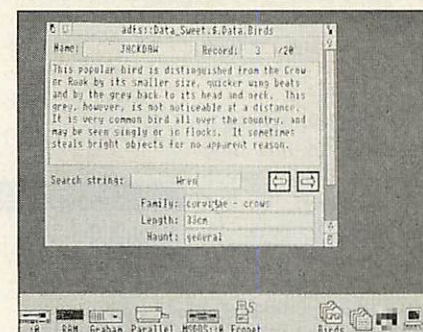

Apart from the speed increase and improved graphical presentation, there are new features: *Key Plus* is a true relational data-

base system accessing records from a number of open datafiles. You can now design your own form for displaying and printing data and numeric fields have been greatly improved. The graphing and mapping abilities really impress and there's lots more. Existing *Key* datafiles like the popular *Animals In Action* and *Earth Sciences* series will be converted for *Key Plus* and will include enhanced mapping facilities.

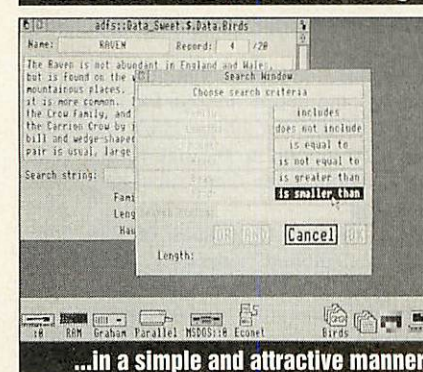

Key Plus can control Philips or Sony Laservision players where a video frame grabbing capability is available for displaying images from video discs.

A curriculum web

DataSweet - introduces datahandling...

...in a simple and attractive manner

CHRIS DRAGE examines the importance of datahandling in the National Curriculum, and checks out the software which helps to teach it

Further developments include an integrated mapping system and data links with loggers like Phillip Harris' *EMU/Datadisc Plus*, *LogIT* (Griffin & George) and the Advisory Unit's *Weather Station*. Datafiles will enjoy compatibility with *Genesis* (Oak Solutions) and a primary version of *Key Plus* should be available by the time you read this. *Key Plus* is well placed to continue where *Key* left off, offering improved speed and excellent graphical capabilities.

If your school operates a number of different computer systems, you may decide that the advantage of providing a common datahandling environment outweighs the power and aesthetics of Risc OS software.

DataKing provides just such an environment, consistent for a range of computers (Archimedes, BBC B, Master 128, Nimbus PC-186) and it can work over Econet.

In looks it is not unlike *Grass* or *Key* but lacks the latter's mapping feature, making up for it by providing a comprehensive selection of 12 graph types incorporating both raw data and frequency distribution. An outline option for graphs is provided so pupils can colour in the bars – a nice touch!

The package actually comprises three separate database managers: *DataKing1*, a Ram based system suited to primary pupils, through to *DataKing3* for secondary students, capable of handling large files. Elementary analysis tools (eg, mean, line of best fit) and a calculator facility means that *DataKing* can be used to plot anything from plant growth rates to sports day results and really meets National Curriculum datahandling requirements very well.

An optional package, *DataTrans*, will convert almost any data format to that of another, which is very useful if you wish to use datafiles created on other packages.

The idea of integrated software is not new on Acorn computers – remember *Mini Office*? Minerva Systems has published a similar suite of programs for the Archimedes' series called *Desktop Office*, including an integrated spreadsheet and database manager with wordprocessor and communications software.

Again, the advantage of this system for schools lies in its limitations rather than its versatility. *DTObase*, for example, is relatively easy to use with its cassette recorder-

style control panel and the ease with which you can design card layouts. Searching, creating subsets and sorting, etc, are well up to Minerva's standard and although the menus may take a little while to get used to, *DTObase* does perform well.

Similarly, *DTOSheet* is a straightforward 'no-frills' spreadsheet which may not necessarily meet the needs of the school office but would more than suffice for a secondary group's 'mini enterprise'.

Of the other programs in the suite, *DTOChart* (above) stands out as a super graph plotting program which accepts data directly from *DTOSheet* and *DTObase*. Up to three sets of data can be used concurrently and each graph can be scaled manually or automatically and saved as a complete sprite if necessary for DTP work.

The remaining programs include *DTOWord* – the Archimedes' answer to *Wordwise*(!) – and *DTOComms* which will only be of use if your school communicates regularly via a modem.

DTO is a mixed bag of programs which, overall, do represent very good value. To purchase the equivalent individual programs would amount to considerably more than its asking price. It should happily find a niche in lower secondary departments.

For a full Risc OS-compliant, multi-tasking database manager which will share data with *DTP*, *Edit*, *Pipedream*, *Graphbox*, etc, then *Flexifile* will not disappoint. Easier to use than *Multistore*, it is a fully relational database with some powerful features. Multiple files can be open at the same time with relational linking between any two of them (without the need for any bespoke programming). Cards can contain sprite images in addition to textual and numeric data.

Of particular interest to schools is its unique 'soundex' searching system which allows even misspelt items to be found. Mathematics can be performed using the macros allowing, for instance, age to be calculated from date of birth. Indices allow browsing of the records in more than one order without performing sorts. Like *Multistore*, *Flexifile* can generate comprehensive reports and gives you full control over the creation and editing of card/report/label formats.

The only reservation I have about *Flexifile* is its price, which I fear the education market will just find too steep.

Lastly, for this month, a word about *Quest*. I must confess I have never been a fan of this particular program, but the Advisory Unit has made an effort to provide alternative query commands which are related more to natural language and the program is considerably enhanced from the original BBC version.

Furthermore, the AU is committed to supporting *Quest* users by publishing datafiles and related resources totally in the context of the National Curriculum.

The first of these is the *Migration Pack* for key stages 2 to 4 which has been produced in conjunction with the *RSPB Migration Pack*.

It aims to introduce bird migration to children via the media of datahandling with a computer and related resources including a disc of datafiles, a set of workcards, a handbook and an RSPB video entitled *Migration Mystery Tours*. In this it succeeds extremely well. In order to make use of this pack however, you will also require *QMAP* (Advisory Unit).

● *Key Plus* is available from ITV Association, 6 Paul Street, London EC2A 4JH. The cost for Archimedes/A3000 owners is: Single copy £50; For primary schools with less than 150 pupils £60; with more than 150 pupils £75; Middle schools £100; Secondary schools with less than 800 pupils £120; with more than 800 pupils £150.

● *DataSweet* is available from Kudlian Soft, Hampshire Microtechnology Centre, Connaught Lane, Portsmouth, PO6 4SJ. Price: £30 (primary); £60 (secondary).

● *Desktop Office* and *Flexifile* are available from Minerva Software, Minerva House, Baring Crescent, Exeter EX1 1TL. Price: £129.95 and £149 respectively.

● *DataKing* and *DataTrans* are available from Shenley Software, 5 Coombefield Close, New Malden, Surrey, KT3 5QF. Price: £49 and £18 respectively.

● The *Migration Pack* (requires *Quest* £30, *QMap* £30) is available from the Advisory Unit for Microtechnology in Education, Endymion Road, Hatfield, Herts, AL10 8AU. Price: £25.

...INTO YOUR REPORTS

If you're excited by figures, then Clares *Schema* will amaze you with its abilities. You can perform almost any type of calculation on a set of figures including Financial, Statistical or Mathematical operations. You can even pass data between upto fifty different spreadsheets.

But if you find all things mathematical tedious then let *Schema* do the hard work for you. You can even automate those boring but necessary tasks such as weekly or monthly summaries.

Not only will it help you make sense of previously incomprehensible figures, but you can display them in various graph formats — all in glorious colour. The graphs can then be incorporated into DTP packages such as Clares *Tempest* for really professional reports which will impress your colleagues. Your reports will never be dull again.

Schema runs on all Archimedes and BBC A3000 computers with at least 1 Mb of memory and RISC OS.

Price £129.95 (Education £99.95)

Schema was produced in association with Acorn Computers Ltd.

98 Middlewich Road, Rudheath, Northwich, CHESHIRE CW9 7DA.

| LASER DIRECT (LPB8 Hi Res.) | £1349 |

Midnight Graphics Products

Midnight Tracer

!Paint to !Draw conversion, turn your sprite files into fully editable object orientated draw files which can be scaled, rotated and manipulated without any loss of detail.

Ideal for users of all Desktop Publishing and Scanning packages. Accepts any sprite file and offers many image processing facilities. Translation can be colour or monochrome, includes a unique automatic tracing feature, variable trace options and curve fitting facilities.

The manual includes a user friendly tutorial with hints and tips on how to obtain the best results from your sprite files.

!Tracer is an ARM coded Risc OS multitasking application and will easily run on a 1Mb machine.

Midnight Tracer £52.13

Colour Sprite Dumps

Dot Matrix Sprite Dumps

Scaling available - any ratio is possible. Draft, double or quad density, for optimum speed or optimum quality. Choice of special dithering patterns for best effect.

The printer driver uses a dithering pattern to produce the required colours on the printout. The first pattern produces bright sharp colours, very similar to those on screen. The second pattern is used to reduce the 'moire' effect resulting in more subdued colours.

Integrex 132 and HP Paintjet

The HP Paintjet dump has an OHP feature which allows the creation of slides and transparencies for use in presentations.

Available for all popular colour printers.

Sprite dumps £26.04

SOFTWARE AND BOOKS FOR THE BBC AND ARCHIMEDES

from Dabs Press, premier Acorn book publisher

BBC SOFTWARE

HYPERDRIVER

The ultimate printer driver ROM, with over 80 commands, a built-in NLQ character set, WYSIWYG previewing, access from View, Wordwise, Interword or BASIC. 100 page manual. For B/B+/E/M/C. Price £29.95 ROM, £24.95 disc for SRAM.

MINIDRIVER

As HyperDriver but for Mini Office II. Includes Viewdata terminal. £24.95 ROM. SRAM version £19.95

MOS PLUS

Utility ROM for Master 128s only fixing EDIT and CLOSE#0 bugs, ADFS format, verify and backup in ROM, backup/compacting in SRAM, alarm clock and configurable startup facility and much more. Price £12.95 ROM, £7.95 SRAM.

SIDEWRITER

Pop-up notepad for SRAM users (any SRAM machine), works with any software. Price £7.95

ASSEMBLER BUNDLE

Two Bruce Smith books on 6502 assembler with discs and Master Series update booklet. For B/B+/E/M/C. RRP over £30, yours for £4.95!

FINGERPRINT

SRAM or main memory 6502 machine code monitor/disassembler/memory editor. For B/B+/E/M/C. Price £9.95

CONVERSION KIT

Ready-made 6502 assembler routines for learning or development. Price £7.95

BBC BOOKS

VIEW DABHAND GUIDE

Bruce Smith's comprehensive guide to the View wordprocessor. "For those who want a complete, thorough and readable guide to View, then Bruce Smith is your man." (Beebug). £12.95 or £17.95 with disc.

VIEWSHEET/STORE GUIDE

Graham Bell's 352-page *opus maximus* on these packages. "...invaluable reference tool" (Electron User June 1988) £12.95 or £17.95 with disc.

MASTER OPERATING SYSTEM

David Atherton's (who?) definitive reference work including the famous 'differences between all eight-bit models' section used by countless programmers to ensure compatibility across the full eight-bit range. £12.95 or £17.95 with disc.

MINI OFFICE II GUIDE

Detailed tutorial by Bruce Smith and Robin Burton for the BBC/Master versions of the software. Price £9.95 or £14.95 with disc.

MASTERING INTERPRETERS AND COMPILERS

Fascinating Bruce Smith title on creating high-level languages. £14.95 with free disc and free copy of the ASSEMBLER BUNDLE.

MASTER 512

MASTER 512 DABHAND USER GUIDE

Full instructions for using the 512 and DOS Plus, with tips on software compatibility. £9.95 or £14.95 with disc.

MASTER 512 TECHNICAL GUIDE

The long awaited companion guide with full 512 programming information and hardware expansion projects. Price £14.95 or £19.95 with disc.

MASTER 512 SHAREWARE COLLECTIONS

Two collections of PC shareware, all tried and tested on the 512. Includes WPs, spreadsheets, databases, games etc. Five full 800k discs in each. Each collection normally £29.95, special offer £25 for both.

ARCHIMEDES SOFTWARE

ABC

Full-featured BASIC V compiler with extensions. Price £99.95. Free Demo disc on request. Add-on Utility pack ABX also available price £49.95.

CAMBRIDGE PASCAL

Desktop-based Pascal compiler widely used in education. ISO/ANSI features plus many extensions. Price £69.95. Free Demo disc on request.

INSTIGATOR

Utility system providing disc sector editor, memory editor, disassembler, command line archiving, and much more. Price £49.95

ARC PC EMULATOR SHAREWARE

Similar to Master 512 Shareware but for the Arc PC Emulator. Two collections of five discs each. Price £34.95. Special offer both for £25.

ARCD FS

Very popular program to provide full DFS facilities in desktop or !65Host/!65Tube. Price £29.95

ARCHIMEDES BOOKS

ARCHIMEDES FIRST STEPS

Introductory book for the Arc covering basic operations and use of !Edit, !Draw, etc. £9.95

ARCHIMEDES ASSEMBLY LANGUAGE

The only tutorial and reference on ARM assembler on the market, with many RISC OS examples. £14.95 or £21.95 with disc.

ARCHIMEDES OPERATING SYSTEM

Useful summary of OS information with detailed examples. £14.95 or £21.95 with disc.

BASIC V GUIDE

BASIC V guide covering differences between earlier BBC BASICs and the superior version for the Archimedes. £9.95

C: A DABHAND GUIDE

Massive 512-page complete guide to C programming. No previous experience required. Arc & BBC sections £14.95 or £21.95 with disc.

ARC GAMES

ALERION

Classic shoot-'em-up scroller. Multi-level, RISC OS compatible. Not protected. £14.95

ARCENDIUM

Draughts, Backgammon, Reversi and Quadline, now RISC OS compatible £14.95

USER

READER OFFERS

HAVE A FREE GAME WHEN YOU SUBSCRIBE TO BAU

**ONLY
£22.95**

At *BBC Acorn User* we value our subscribers. As well as making sure you receive your copy before it reaches the newsstands, we have negotiated with leading software houses to offer exciting free gifts to anyone taking out (or renewing) a subscription.

The basic subscription price is only £22.95 which includes 12 issues of *BAU* and a FREE game worth up to £24.95 (depending on format) with each new or renewed subscription. For Archimedes/A3000 users, the game is worth more than the cost of the issues – incredible value! There is also an exciting deal for BBC micro/Master users too, with a free game worth £15.95.

Two great free games are available – *Herewith the Clues* for A3000/Arc users and *Holed Out!* for Beeb users. So take out your subscription today while this special offer lasts.

FREE GAMES The following exciting games are available free with your 12-month subscription:

Archimedes/A3000

Herewith the Clues

A Dennis Wheatley thriller full of mystery. If you enjoy detective stories, this is just for you!

RRP £24.95

BBC Micro/Master

Holed Out!

A spectacular 3D golf simulation that will keep you up to par.

5.25in disc (RRP £15.95)

3.5in disc (RRP £14.95)

The Small Print

Please note: Due to the popularity of our subscription offers we have had to adopt the following rules:

1. No more than one free gift will be allowed per subscriber per year (unless you renew your subscription early. In which case your free gift will be supplied within 28 days). This means that we will no longer allow people to cancel their subscriptions and then re-subscribe to get another free gift.
2. This offer replaces all previous subscription offers as stocks of free gifts from previous offers are no longer available.
3. Please remember that your free gift will be despatched separately from the first issue of the magazine to which you subscribed or renewed.

Monthly disc offer

For readers who wish to receive the *BAU* monthly disc, which is packed with great programs listed in each month's issue, we also have a great offer. For as little as £5, you can receive a monthly disc with each issue – see order form.

GAMES

Sim City

In Sim City, you control the greatest cities of the world. In fact, you create them. Build houses, streets, industrial and commercial sites. Decide whether coal or nuclear power will be most profitable (and environment friendly!). You will need your wits about you for this unique game. Each decision you make will immediately affect your city and a wrong decision could result in crime (don't forget to build your police department) or pollution. You will face crises like tornadoes, earthquakes, etc, while trying to collect taxes and balancing the budget, but keep at it and you may become the first town planner to build the perfect city.

Hostages

You are the head of the Terrorist Combat Squad. An urgent call comes from the Minister for National Security. An embassy has been overrun by terrorists, and you've been put in charge of all operations. Your first priority is to place all your crack hitmen in strategic positions throughout the neighbourhood, without getting themselves shot. You then have to get your team of specialist paratroopers into the embassy and save the hostages without any loss of life. There are many potential death traps to trick you — these terrorists are no pushover! The pressure is on . . . and it's your move.

Superior Golf

This is the complete golfing game for one to four players, plus there are full-feature hole and course construction facilities. This realistic golf simulation is for any level of player — novice to professional. You can also play on your choice of six of the most famous courses in the world. You will soon work out how to avoid the usual golfing hazards — water, bunkers, light and heavy rough, trees and the slope of the green.

When you've mastered the sport of golf, you can design and construct your own holes and courses with the easy-to-use, but very powerful, Hole Editor and Course Editor. Then you can enjoy playing a round on your very own masterpiece.

Play it again Sam 13

This four-game compilation from Superior has yet another collection of excellent games to get the year off to a cracking start. Barbarian 2 is a game of skill and strategy and your objective is to overcome the gruesome monsters. For classic fans, there's an exciting 'bat n' ball' clone — Hyperball. Of course, everyone loves Percy Penguin, a classic and highly addictive game. Percy must kill the Snobees by hurling ice cubes at them. And Pandemonium breaks out when you try to construct the core against all odds. Intrigued? This compilation is a must for your collection.

Play it again Sam 14

Another in this series of games anthologies, this is the very latest from Superior. You've seen the movie . . . now play the game! Play your part as Schwarzenegger the Predator, fighting through the South American jungle. But, beware the lurking alien. Ballistix is a different kind of ball game. And you don't have to play alone. Have the neighbours around for a league competition, and see whose yard the ball finally falls in. And speaking of balls, Superior Soccer is pitched in to this best yet PIAS. Star Port completes the ensemble. It's a brand new arcade adventure that will transport you into space to save the station's medical supplies. To become a hero though, you need to first look at page 108, and order your copy of Play it again Sam 14.

DESIGN

BAU is pleased to offer its readers a great multi-tasking 3D graphics and animation system for the A3000/Archimedes

Euclid 2 is the only multi-tasking 3D graphics and animation system for the Archimedes/A3000. Completely re-written to follow Acorn's guidelines for Risc OS applications, *Euclid 2* is a fully interactive, multi-document, 3D, graphics and animation system.

Designed to be simple for the beginner to get to grips with, it has an intuitive icon-driven single-window interface. You can quickly throw new ideas together, rotate them in real time, zoom in and out, view them in perspective from any position and even show the effects of lights placed anywhere in the scene. *!Draw* files can be exported and imported.

Special Offer Price – £50 (3.5in disc)
(RRP £70, a saving of £20)

WHAT YOU SEE

ACTUAL SCREEN SHOT FROM WORDWISE.

THE TOTAL DTP SOLUTION

For a limited period we are offering *The Publisher* PLUS four extra discs giving a total of 86 different fonts for only £49.95!

The Publisher is a remarkably easy to use and powerful desktop publishing package, featuring its own page description language, allowing you to operate it from within *Wordwise*, *Wordwise Plus*, *View*, *Interword* or *Wordpower*, and giving you total control over the layout of your documents.

It features a unique preview mode so that what you see is exactly what you get, including different sizes of font, reversed text, grey backgrounds, centring, left and right justification, eight box styles for highlighting text and creating borders, and much, much more.

Combined with the 86 fonts, *The Publisher* offers you everything you need to produce professional-looking results — all in one package, and for less than £50!

But remember, this is a limited offer, so to be sure of your *Publisher* kit order your copy soon.

WORLD IN ACTION

SAM GREENHILL, fed up with London and the world, finds two simulations that enable him to create his own environment

Eighteen months ago in August 1989, a special paper was drawn up for the Urban and Regional Information Systems Association (URISA) conference in the United States. The paper was about an Amiga computer game called *Sim City*: what it is, how it works and how it could be used to make money.

Sim City is, in a nutshell, a game which simulates the growth or decline of a piece of urban land. The player, as mayor, can alter variables such as the tax rate or the police and fire department's budgets, and as chief planner may – among other things – build roads or power stations, and designate areas of land for residential or industrial development.

The computer, meanwhile, is busy with a set of algorithms which determine how successfully the arrangement works as a

city. It takes account of population density, electricity supplies, unemployment and the effectiveness of the road network. If the result is positive the city will become popular and people will come to live there. The tax money collected will rise and this will enable you to expand. And so it goes on.

The game was conceived by Will Wright, an American who studied a lot of real town statistics before formulating the algorithms for *Sim City*.

Just as pilots spend many hours in a flight simulator before welcoming passengers on board (at least I hope they do), the paper presented to the URISA conference embodied a similar idea for town planners – they could perfect their theories on the computer simulation before wrecking any real towns (or something like that).

It is an idea that has been taken on a much grander scale by a British software company called Eclipse. It has just finished a game on the Archimedes called *Worldscape*, which, in a broad sense, simulates natural development on a global basis, taking into consideration the effect of cities, power stations and even rainforests, then calculating the impression on the ozone layer and global temperature. I shall talk more about *Worldscape* later, but first, after four years, *Sim City* is now available for the BBC micro: how does it fare?

To begin with, the player is presented with an empty red desert, a few miles of rugged coast, and \$20,000. At the base of the screen lies a panel of 20 icons, six for the budding mayor in you and 14 for the aspiring town planner. Your 20 grand begins to disappear fast as the essential

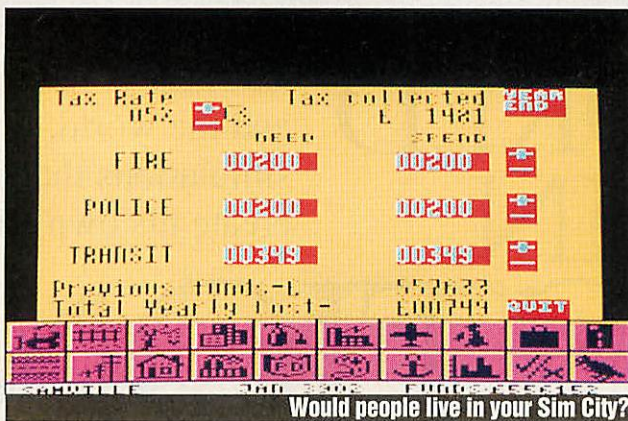

power station (coal or nuclear) is installed, a local grid set up, police and fire stations built and a road network begun. Placing residential zones near the coast boosts house prices and hence taxes collected. The people living in the houses are called 'Sims' and it's darn hard to keep them happy. The areas of residence must be placed away from factories but close to the coast and park land. The Sims want roads to take them to work and generous protection against fire and crime. In short, they want blood.

Once the vital foundations have been laid, the village can begin to develop. The important thing to remember about *Sim City* is that it is the Sims who do the developing – your job is merely to provide acceptable conditions for the Sims to live and work. As the Sim clock ticks the months away, residential zones change from ad hoc buildings to high rise flats, and industrial zones grow from small pumping stations to large plants. As the city expands, it develops an appetite for commercial zoning, which contain offices, shops and supermarkets. A large city will need an airport, docks and several large stadiums.

I discovered the best strategy for playing *Sim City* quite accidentally. I built up a small village consisting of several residential and industrial zones, a few park areas and a couple of police and fire stations, then left it running overnight. As luck would have it the night passed peacefully, devoid of any earthquakes, tornados or large monsters. Also rather luckily, a group of obliging rich suckers chose to take up residence during the night and regarded my steep 20 percent tax rate with uncritical acceptance. Whether they naively believed that their wealth was in good hands, or were merely gullible is beside the point – I made a fortune.

By way of thanks I bulldozed their houses, roads and places of work then cleared the land ready for my new mega city to be built, and with a budget of over \$600,000.

This cunning strategy was recognised by Superior at an early stage as something of a bug in the 16-bit versions of *Sim City*, so the BBC game has found itself managing both the city and 'the disaster phenomenon': a 1/256 chance of an earthquake each

year. The purpose of this is specifically to keep the mayor on the job with an eye on the figures. If left overnight, your city is bound to be full of holes by the morning. Personally I find this annoying, but Superior's justification is fair enough so I won't make a fuss. It is possible to test your ability to deal with a disaster before it actually occurs – there is a short menu with three options: earthquake, tornado or a 'Godzilla'-type monster which bounces on top of the city with a big grin! Morale is next to nothing and every graph in sight is one big negative for about 10 years following a disaster.

There are several special screens available to the mayor. The budget screen pops up every year to deliver the important news: profit or loss? It calculates the cost of all the police and fire stations, the price of long stretches of roads and railways, then combines the population and tax rate to show

how much money the city earned in the past year. The budget screen provides facilities for adjusting the tax rate and money spent on transit and emergency services. Unfortunately, on the humble BBC, a large city can take up to 10 seconds to calculate everything, and it can be irritating to suddenly jump to it when you're half way through a construction operation.

The map screen shows a map of the whole city and graphically indicates areas well covered by the police and fire services. On the evaluation screen, the all important population figure is revealed and some moans are voiced by the Sims. They tell you their most urgent problems – usually crime and the tax rate in Samville (my city). A percentage figure discloses the proportion of the city connected to power, though a graphical indication – as with the police and fire services – would have been better. As it stands, it is very difficult to know which areas are lacking power.

The graph icon provides an overview of progress – or lack of it – during the past 10 years. This is quite useful though sometimes confusing. Unemployment is always rock-bottom in Samville, but factors such as crime and popularity fluctuate, even when I do nothing for 10 years.

It took me several weeks to produce a city which had any hint of 'thrive' in it, and I almost gave up a couple of times. Samville is now technically a 'big city' boasting a population of 101,000 people. Samville Sims complain

mostly about crime and for a long time I couldn't figure out why. Police stations can be easily sighted from almost any street corner in my town. Then I was advised by Superior that the cause of the problem was the lack of trees near residential zones! Apparently trees lower the crime rate because they reduce the population density. Ah well, you learn something new every day...

The tools available in *Sim City* are fairly limited; in other words you can't really do very much. In a real city, the mayor would commission construction work on the cheap, run morale boosting campaigns and use contacts in high places to influence the figures, though not that high – I mean there would still be earthquakes. The game's original author, Will Wright, admits: 'it is simplistic – we did not, for example, simulate variables on

literacy which would affect the crime. It is a general approach'. But this doesn't matter. You can do very complex things with *Sim City* and have a great deal of fun.

Not so *Worldscape*, the Archimedes game mentioned earlier. I have not had a great deal of fun playing it to date, though I can see that some people might. Its aim is to afford the player an opportunity to rectify world devastation. It focuses primarily on the ozone layer, pollution and the greenhouse effect. A clean world is presented to the new player; a planet with a perfect balance of nature. Unlike *Sim City* in which money dictates your every move, *Worldscape* has a power meter. Whenever you build anything, your power depletes. The speed at which power is restored is regulated by the game balance meter. This one is adversely affected by urban development and pollution – ie, the nasty things – but boosted up by rainforests and waste recycling plants.

The fresh planet provided with *Worldscape* is called Egonia though I changed mine to Napalm Sets (think about it). Icons are placed on the map with a pointer, as in *Sim City*. City blocks can be placed but 'grow' naturally if the conditions are good. Cities need pipes to connect with the sea, and these carry water to, and waste from, the buildings. A sewage plant carefully inserted between the city and the sea will help keep the game balance cheerful, and a water purification plant is necessary to make water pumped to cities any use.

The same sort of philosophy applies with power stations. Nuclear jobs require a re-processing plant for radioactive waste. When lacking, you've let yourself in for a hard time! Before building a power station it is a good idea to commission a seismic survey. This reveals the type of energy source likely to be found in the vicinity, and tells you whether a nuclear, coal or oil powered station would be the best investment.

The trouble is, power stations appear to be very weak and all too soon a city has expanded beyond a certain size causing sections to have blackouts. The only way to rectify the problem is to literally 'cut' the city in half by planting a rainforest down the middle and then build a second power station for the 'new' city!

As with the evaluation screen in *Sim City*, there are several facilities for checking progress in *Worldscape*. An ozone layer information chart blasts pink

squares at you which are supposed to correspond to the world map, and any dark area represents a dreaded hole. A set of line graphs show the changes in population, ozone coverage and global temperature over the past century but these are relatively unhelpful, particularly since the population line is well off the top of the chart and out of sight within the first thousand years.

And therein lies the fundamental problem with *Worldscape*. You build some cities, power stations and so on, hang around a few centuries, then check the ozone layer and global temperature charts. Lo and behold, every city has a hole above it, and the temperature has risen slightly. So? What are you supposed to do about it? The waste reprocessing plants already exist so there's no point in placing any more of those. Basically, that leaves the planting of more rainforests. There appears to be no other mechanism for dealing with the problems. In fact, all you can really do in *Worldscape* is build cities, watch the graphs and plant more trees. Then, after a couple of thousand years the oceans have eroded about 50 percent of the land and there's no more room to plant trees. That's it, end of game.

There are many other problems with

Worldscape. For one thing it is slow. The scrolling apparatus is tedious and badly implemented, and there is a small map of the world at the base of the screen which takes ages to update – and *Worldscape* enjoys updating it as often as possible. Most operations can take about three seconds to execute and this translates to approximately 10 seconds to actually put something on the map, once scanning through the menus and selecting a block has been done.

It can be quite fun placing cities and building little communities, but *Worldscape* is chiefly concerned with the natural development process. I think it would've been more fun if communication links could be set up, shipping routes planned and generally the commercial and industrial side dealt with, as with *Sim City*. *Worldscape* seems a bit too serious.

I envisage that *Worldscape* will be of limited educational use, though to be fair I speak as the game player rather than the teacher. I suppose it could be used to teach children about the concepts of conservation and world devastation, but there are too few tools available in the game for it to bear any true resemblance to possible solutions we could use to solve the current problem with the planet Earth today.

As a game, *Worldscape* quickly becomes boring. I was really enthusiastic to begin with and was quite disappointed to find my powers are so limited. It is almost as though the game has only been half completed.

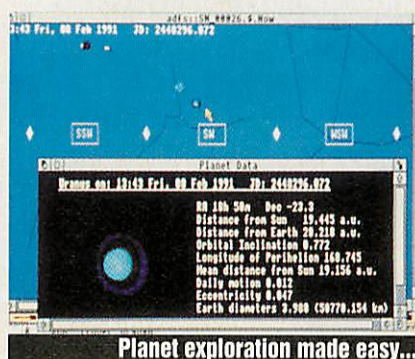

BBC micro owners I urge you to get your hands on a copy of *Sim City* pronto. It is by far the best game since *Exile*. Archimedes people, you have a slight problem. If you're desperate, buy *Worldscape* – I'm not saying you won't like it, just that I don't – alternatively hang onto your cash. Will Wright is currently working on a *Sim Planet* and also a *Sim Evolution*! He is also considering an urban model of *Sim City* based on a non-market driven economy, possibly a communist or third world country. And finally the possibility of an Archimedes *Sim City* is a real one. Meanwhile, Ar'ma headed back to Samville!

Sim City costs £14.95 and is available from Superior Software, Dept M1, PO Box 6, Brigg, South Humberside DN20 9NH. *Worldscape* costs £19.95 and is available from Eclipse, Burcott Manor, Wells, Somerset BA5 1NH.

!Orrery is a new program enabling the Arc to explore our solar system. **FIN FAHEY** takes a celestial journey

FINAL FRON

TIER

Thinking about the scale of our universe can often be enough to make a person recoil in bafflement. How do you come to terms with objects like the distant quasars, 13 billion or more light years away?

!Orrery from Spacetechn is aimed at promoting understanding of one minute corner of this vastness – our own solar system. The original orrery was an intricate construction of steel and brass, powered by clockwork, invented in the 18th century. Elaborate gearing rotated little balls representing the planets around the Sun at the centre, maintaining the correct ratios for each planet's 'year'.

Orreries became ever more complex and accurate, including such refinements as the satellites of Jupiter. In some ways, these devices were early analogue computers.

Spacetechn's *!Orrery* achieves the same effect, but with incomparably more accuracy, using the Archimedes. It models the paths of the nine known planets, the Sun and our Moon, for any date and time, and can show their positions against the stars.

Getting into *!Orrery* is very simple – it's an icon-controlled Risc OS program, complete with preset setup files which can be used to generate particular views with no fiddling around.

There are two ways of looking at the solar system, and *!Orrery* covers them both. We normally look at the sky from our Earth, deep inside the system – a geocentric viewpoint. Traditional orreries allowed the system to be seen from outside – heliocentricity – and this is the first type of view that *!Orrery* shows. Indeed, the intro screen selects the only view we have of the whole solar system from outside, which was taken by Voyager 2 in September 1989.

Individual planets themselves are depicted as digitised images taken from various space probes – mostly Voyager again. They can be shown to scale, according to either your closeness to them, or by their relative sizes. The system may be viewed from any angle, so that you can move out of the ecliptic (the plane of the system) and view the orbits of the planets from 'above' or see things from edge on.

If you wish to focus on the planets alone, the starry background may be turned off.

This program is more than a static display, however. From a given starting time, you can run the planets in their courses backwards or forwards. This would be tedious in real time, but the Accelerated time option allows you to speed things up. At a month a frame, things start to zoom along nicely. To help you to understand the differing orbital motions, each world can be made to leave a track of its orbit behind.

The orbits in *!Orrery* are to scale, which means that it's very hard to see the inner worlds – Earth among them – from beyond the orbit of Pluto. A Zoom option, however, solves this problem. Another useful option means that clicking on any planet or star brings up a window with extra information on that body.

Down to Earth

Having tasted the heady joys of interplanetary space, it's reassuring to find that *!Orrery* can cope with the view from a suburban back garden. All you have to do is provide the program with your latitude, longitude, and the time (it will take the current time from the system clock if you wish) and select the geocentric option. By using a couple of slider controls, you can scroll around the sky from north to south, and from east to west.

For added realism, you can turn on atmospheric effects, which means that you see nothing but blue sky if the sun is high, but as twilight sets in, the stars and planets gradually emerge from a darkening sky. Unlike in the heliocentric view, the Moon image now shows its different phases.

Once again, accelerated time can be used to speed up the planets, and Spacetechn has added a nice extra touch by also including the 'precession of the equinoxes'. Due to precession, the Earth's rotational axis sweeps out a cone over the centuries, which means that the poles do not point at the same star all the time, but describe a circle in the heavens.

Our current north pole star, for example, is Polaris in Ursa Minor, but for the ancient Egyptians it was Thuban in Draco. The program shows exactly this if you set

it for around 2000 BC. It's quite fascinating to speed up the program and watch the poles rotate around the sky, taking in different stars for different dates.

Although *!Orrery* is aimed at showing the solar system, it can also be used to display the constellations. Stars of brightness down to a magnitude of around three are included, which is enough to show the outlines of the major star groupings, and there's an option which displays the outline of the groups in the heavens.

You can change the appearance of maps in a number of ways. These include turning the horizon on and off, making the map occupy the whole screen, or changing the colour of the constellations. More importantly, maps can be sent to the printer for later perusal, or saved as draw-files or sprites.

Given the timely introduction of astronomy on the National Curriculum, *!Orrery* is an ideal introduction to the solar system. It looks stunning, and runs fast enough on a 440 to give a feel for the relative motions of the planets, although it's at its best on the 540. Its simple and consistent controls and menus means that this is educational software at its best.

Amateur astronomers will enjoy the program, but probably find it of limited use, since most are by and large concerned with observing stars, not the planets, and are concerned with small fields of stars, especially when observing variables.

It's no great criticism, but I wished for a few additions. Some asteroids to fill that yawning gap between Mars and Jupiter, a few token comets to give users a feel for their strange elongated orbits, perhaps the main satellites of Jupiter (why should Earth be the only planet with a satellite) – the list is long. No matter – I'm sure Spacetechn is already contemplating the possibilities of enhancement.

Few things can excite the imagination more than gazing at the stillness of the real sky on a clear night. *!Orrery* offers a complementary view by depicting how the planets whirl in their celestial dance.

!Orrery costs £95 and is available from Spacetechn, 21 West Pools, Portland, Dorset DT5 2EA.

HARDWARE AND SOFTWARE EXPANSION FOR THE ACORN ARCHIMEDES COMPUTER SYSTEM

ARCHIMEDES EXPANSION CARDS

IEEE488 INTERFACE - A full implementation of the standard for automatic test and measurement systems.

16 BIT PARALLEL I/O - Two separate 16 bit input/output ports with handshake lines for a wide range of applications.

DUAL RS423 SERIAL INTERFACE - For communicating with two additional RS423 or RS232 devices e.g. printers, plotters, modems, instruments etc. Up to four cards can be fitted.

12BIT ADC - An 8 channel analogue to digital converter which can take up to 166000 samples per second.

STE BUS INTERFACE - Enables the large range of STE Bus I/O cards to be used with the computer. e.g. A to D and D to A Converters, Parallel I/O, Serial I/O, Bit Bus Interfaces, Stepper Motor Controllers, Peripheral Controllers, Video Controllers, Eprom Programmers etc. - available soon.

GINO-F 3D, GINOGRAPH AND GINOSURF the FORTRAN graphics subroutine libraries

TERMULATOR - Converts the computer to a terminal which can communicate with other computers by emulating the VT range (VT52, VT102 and VT220) or a Tektronix 4010 graphics terminal. -

HARD DISC UPGRADES - Internal and external hard disc upgrades from 20 to 512 Mbytes.

COMPLETE SYSTEMS - Including laser or dot matrix printer configured to customers requirements

IEEE488 INTERFACE FOR THE BBC MICROCOMPUTER - Hardware compatible with the original Acorn IEEE488 interface. Can be used with Models B, B+ and Master 128
Officially appointed Acorn Scientific Dealer

PERSONAL & BUSINESS ACCOUNTS

The Account Book & The Invoice Program

These two programs have had excellent reviews over the years and enjoy a wide user base. They are very easy to use whether you are VAT registered or not and run on the BBC B, Master, Compact and Archimedes. Although they do not multi-task on an Archimedes we are currently working on a multi-tasking version. They are available at £34.95 each or £59.95 together. Please state computer and disc size when ordering or send/phone for our brochure.

Personal Accounts for the BBC B, Master Series

10 Bank/Credit Accounts, 48 Income/Payment Headings, Full Scrolling entry/edit system with extensive reporting including bank reconciliation and statements. Only £18.95

Personal Accounts SPECIAL EDITION VERSION 2 for the A3000 and ARCHIMEDES

RiscOS Multi-tasking version of the above with brilliant features including a 50 character description space per entry, 28 fully automatic standing order templates for any period on payments and income including forecast feature. Autosave option, Calculator, Note-Pad and much more. Fully scrolling entry, edit and search system makes this a joy to use which is why Archive Magazine described it as "very powerful, good value, easy to use and highly recommended". Only £28.95

LCL

Self-Tuition Courses

World leaders - Hons graduate/teacher authors - All disc sizes
- At all major shows - £5 off total for 2, £10 off for 3

Each course includes 24 programs on up to 105 topics held on 2-4 discs/tapes and usually with 2 books and a voice tape and costs only £24. (BBC, Compact, Arc, Elec)

NEW NATIONAL CURRICULUM version

PRIMARY MATHS COURSE All animated, colour graphics. Extra two discs available for £5 (4 discs)

READING WRITING COURSE Teaches using moving colour pictures and speech **NEW**

MICRO FRENCH (8-GCSE)
MICRO MATHS (11-GCSE)
MICRO ENGLISH (8-GCSE) With real speech & graphics adventure game
Best seller, highly acclaimed
Eng. Language or EFL with real speech (new enlarged)

MEGA MATHS
HOME COLLEGE A-level course with all Calculus by graphics
Open learning course of video, software and books. Choice of MATHS, ENGLISH or FRENCH. Only £49.99 each

ACORN IS A REGISTERED TRADEMARK OF ACORN COMPUTERS LTD

Hardware & Software

— for the Archimedes —

LASER-DIRECT

The low cost 300 dpi. super fast, direct drive laser printer for the Archimedes.

£999.00+VAT (£1148.85 incl.)

LASER-DIRECT Hi-Res

High resolution (up to 600 dpi) 8 page per minute laser printer. 4 Mbyte RAM recommended for maximum resolution.

£1495.00+VAT (£1719.25 incl.)

LASER-DIRECT Hi-Res Board

Expansion board only, suitable for a standard Canon LBP4. Up to 600 dpi resolution and fast direct drive printing.

£350.00+VAT (£402.50 incl.)

IMPRESSION II

Impression II with its combined Wordprocessor and DTP program has become the industry standard for the Archimedes & BBC A3000.

£169.00+VAT (£194.00 incl.)

IMPRESSION Junior

Junior is the entry level member of the Impression family.

£89.95+VAT (£103.44 incl.)

SCAN-LIGHT Junior

Probably the most popular family of scanners for the Archimedes, the Scan-Light series offers top quality scanners with the best software around.

£189.00+VAT (£217.35 incl.)

SCAN-LIGHT A4

A full A4 width hand-held scanner offering a choice of 4 resolutions from 100 to 400 dpi.

£399.00+VAT (£458.85 incl.)

Scan-Light A4 with sheet feeder

£499.00+VAT (£573.85 incl.)

Illustration features Archimedes, Scan-Light Junior and Laser-Direct HI-Res.

TRACE ELEMENT

There are two ways of storing graphics within a computer. You can either use an application like *!Paint* and set the colour of individual pixels and create a bitmap image (a sprite), or you can use *!Draw* and manipulate the location and style of lines and points to come up with a vector image (a drawfile).

Both these methods have pros and cons. Sprites are easy (and quick) to plot on the Archimedes, as the screen is memory mapped and the actual picture displayed on the monitor is generated by a raster scan. Unfortunately they are not so easy to rescale or rotate – it is often very tricky to retain detail when rescaling and rotating often produces very uneven and jagged results.

On the other hand, drawfiles can be rotated and rescaled as much as you like and the resulting image retains all its detail. This has the added advantage that the printer drivers can use the resolution of your printer and produce hard copies of the image with smooth edges – try dumping a monochrome sprite and you'll probably end up with some very nasty looking edges!

The main problem with drawfiles? They are quite tricky (and slow) to render, especially when they contain a number of thick-lined, filled-in Bezier curves.

In most cases it is obvious when to use a sprite and when to use a drawfile – but there are times when it would be nice to convert an image in one form to the other. Imagine you've just had a logo designed for your company – you could first scan the image and produce a sprite, tidy up any glitches with *!Paint* and print the result.

Wouldn't it be nice if you could transform this sprite into a drawfile so you could enlarge it to produce a poster without those nasty edges? Well, now you can, with the help of Dabhand Computing's *Midnight Tracer*.

Tracer in action

Tracer comes supplied as a single application on a disc. It is written entirely in Arm code, so it runs super fast and there's no C Library to load, so it uses very little disc space! Once installed on the icon bar (in the usual Risc OS way) any sprite files dropped on its icon or in any of its windows are immediately displayed in the Sprite window. A second Object window is also displayed,

exactly the same size as the Sprite window, but empty for now.

To trace the sprite, simply click in the Sprite window with the Select button on the mouse. After a few seconds, the resulting drawfile will be drawn in the Object window.

The drawfile can be saved either by clicking the menu button over the object window, or from the *Tracer* icon on the icon bar. If you load this file into *!Draw* you will indeed see that the image is now stored as a series of lines with Bezier curves.

If you want to convert sprite files to fully readable drawfiles, *Midnight Tracer* is for you.

DAVE LAWRENCE has been trying it out

Trace options

For £60 I'd expect a menu with lots of things to twiddle, and *Tracer* doesn't let you down here. Clicking Menu over the Sprite window gives you access to the sprite and trace options that allow you to tweak the performance of the package.

The Trace Options submenu lets you adjust the four parameters used by the tracing algorithm. Fiddling with these basically changes the coarseness and level of detail present in the resulting image. The first control, Sample, allows you to change the

number of pixels examined before a change of direction is registered – the higher the number, the larger the area examined, so a high number will make ‘fuzzy’ edges appear straight. However, it will make *Tracer* ignore any small details.

The next control, Close, represents the minimum distance between control points in the resulting image. Making this big will again tend to smooth out jagged or stepped edges but, as with Sample, it will largely gloss over any small details. The Smooth parameters determine the angle at which a control point changes from a corner to a curve. If two lines meet at an angle less than the Smooth value, a corner point is created rather than a control point on a Bezier curve. Different sprites will need different values for these parameters and it is really a matter of trial and error to find out what they should be for any particular image. Fiddling with them can greatly enhance (or degrade!) the results.

Tracer allows you to trace monochrome or colour images, but the latter have to be done ‘manually’. Don’t despair – this doesn’t mean you have to do it yourself, instead you have to use the Sprite Options submenu to select which colours are displayed in the sprite window, select Manual from the Trace Options menu and then click on the areas in the sprite window that you wish to trace.

Automatic tracing can work out where the areas that should be traced are, but *Tracer* cannot do this with colour images. The sprite options also allow a very basic thresholding to be applied to images. This is mainly used for grey scaled images. A simple slider is provided that controls the cut-off value (0-255) between white and black pixels, the Clean button below the slider can then be used to tidy up any stray pixels.

Manual tracing can be very useful, even when automatic tracing is possible – in a complex image you can just tell *Tracer* which bits you want traced without loading the image into *!Paint* and removing the unwanted areas first. Menu options (and key short cuts) are conveniently provided for undoing mistakenly traced areas.

One final option allows you to join traced edges together with ‘move’ commands. This means that they can then be treated as one path by *!Draw*, etc, resulting in white ‘holes’ in the sprite remaining as ‘holes’ (and thus not being filled) in the drawfile.

What it can do

As you can clearly see from the examples on these pages, the results from *Tracer* can be really impressive. The unfortunate thing is that they can also be slightly disappointing – but don’t be alarmed, I only thought this at first.

There is no way that *Tracer* can produce absolutely perfect results every time and so the way to look at the results is that it’s amaz-

ing it does anything at all! It is very unlikely that any output from *Tracer* can be used immediately without first touching up manually in *!Draw* – but would you prefer to do a little tweaking of control points or trace the entire image yourself?

At the very worst, *Tracer* will provide you with a basis from which to work towards producing a final image.

The program does have its faults, some of which are cosmetic. For example, there is no ‘scale view’ on either the Sprite or Object window and the Trace Options can only be set by clicking on up and down arrows – you cannot type in values. Other quibbles are more functional, but could possibly be built into version 2.

The current algorithm is not particularly good at spotting corners or straight lines. Right angles are usually traced as a rather sweeping Bezier curve and near-horizontal straight lines appear as a series of small, stepped Beziers! These problems can be minimised by twiddling with the Trace Options, but normally at the expense of other wanted detail in the image. I would like to see some sort of user assistance in indicating obvious corners and lines before tracing starts.

It would be nice to auto-trace a grey scaled image without converting it to a pure black and white image – the grey pixels could then be taken into account when tracing. This would help alleviate some of the problems of tracing near horizontal lines.

The program will only trace outlines of shapes. It cannot, for example, see that a line is ‘thin’ and only produce a single line in the output – this can produce some very strange results if you’re not expecting it. Likewise, thick lines are converted to their outlines rather than their centre lines and thickness. These are slightly unfair criticisms of *Tracer*, as the program isn’t designed to do either of these, it’s just that it would be nice if it did...

Conclusion

Unless you are amazingly adept with the mouse and *!Draw*, *Tracer* is indispensable for converting bitmaps to outlines. Once you’ve played around with the program for a while all sorts of applications spring to mind.

You could reproduce your company logo at any angle or size quickly and easily (see example). You could even scan some of your own handwriting and produce a Risc OS compatible font!

To sum up; a very good effort at tackling an exceedingly difficult problem.

Many thanks to Sweeney Todd’s Restaurant for letting me reproduce its logo as an example. *Midnight Tracer* costs £52.13 and is available from: Dabhand Computing Ltd, 5 Victoria Lane, Whitefield, Manchester M25 6AL.

Ace Computing

RISC OS Euclid is the best multi-tasking 3D graphics and animation system for the Archimedes. It works like a 3D version of Draw, and now forms the centrepiece for a number of related products allowing the creation of complex animation sequences with the minimum of effort.

Mogul makes full use of **Euclid's** unique hierarchical data structure to generate films of 3D objects with articulated motion and simultaneous camera motion.

Tween produces films from Draw files. It uses techniques similar to **Mogul** and generates a film by

calculating intermediate frames from a set of key positions.

Splice allows you to edit films produced by **Mogul** or **Tween**. You can even produce hand-drawn cartoons by converting sprites from any source.

Support is provided for import and export of Sprites and Drawfiles. Films can be played by the **Projector** which comes free with **Euclid**, **Mogul**, **Splice** and **Tween**. Films and **Euclid** files can be used with Genesis.

Such is the enthusiasm for **Euclid** there is now a user group called **Elements** which provides a quarterly disk containing hints, tips, animations and user pictures like the ones in this advertisement.

Euclid £70 **Mogul** £20 **Splice** £30 **Tween** £30 **ArcLight** £50

TAXAN PRESENTS A SCREEN LEGEND

Multivision 795 with Trinitron® CRT

Taxan announce the latest addition to our range. A screen star which is destined to become a legend. The new Multivision 795.

This compact 14" auto-scanning colour monitor has already attracted rave reviews. Manufactured in Japan, Multivision 795 incorporates a 0.26mm Trinitron® cathode ray tube, providing a clear, flicker-free image from VGA right up to 1024 × 768 resolution. A versatile little performer indeed.

And if you think that has a touch of style, wait until you see the quality and colour of the picture.

Multivision 795 awaits your audition. Start the cameras rolling by returning the coupon or phone us on (0344) 484646.

Multivision 795 for the Acorn Archimedes now includes a free video cable and a VIDC Enhancer from Atomwide.

Wild Vision

THE ARCHIMEDES AND A3000 EXPANSION CARD SPECIALISTS

Wild Vision is the leading company specialising in the design and manufacture of expansion cards for the Archimedes and A3000. The Company has special expertise in the field of video, and many of the cards act as interfaces between computers and video for various applications. A custom design and manufacturing service is offered for specialist applications.

Due to expansion, Wild Vision has recently moved to a new hi-tech factory unit. Design and manufacture is now undertaken in ideal surroundings to the highest professional standards of quality. Wild Vision products are designed to comply with all Acorn's specifications for expansion cards and RISC-OS software.

NEW

A3000 Expansion Box

Enables Archimedes expansion cards to be used with the A3000.

- holds 3 standard cards or 2 full width cards
- connects directly into A3000 expansion bus
- provided with 12v power supply
- sturdy steel construction
- multilayer backplane for maximum reliability
- fits neatly to rear of A3000, and compatible with Acorn A3000 monitor stand

A3000 Expansion Box.....**£139.00**

NEW

PAL Coders

Converts the RGB from a computer to a high quality PAL-coded composite video. Unlike lower cost units, these provide very stable output with correct sync for optimum results even with VHS recorders.

- record the computer output on video
- UHF, PAL and RGB outputs
- connect multiple monitors to a computer
- free standing unit

Chroma 135 - RGB input with 1 PAL and 1 UHF outputs.....**£129.00**

Chroma 150 - RGB input with 2 PAL, 2 RGB and 1 UHF outputs.....**£185.00**

Chroma-Genlock Series

An easy to use way of adding captions, titles and special effects to video. Any graphics generated by the computer can be superimposed in full colour on video. Supplied complete with software to generate video captions.

Chroma-Genlock for A3000.....**£215.00**

Chroma-Genlock for Archimedes.....**£215.00**

The High Performance Chroma Series

A range of Genlock and video overlay cards. The cards with Genlock and video overlay have enhanced colour performance for use with professional video equipment.

Chroma 220 Genlock only (no overlay) for A3000.....**£195.00**

Chroma 320 Genlock only (no overlay) for Archimedes.....**£195.00**

Chroma 250 Genlock and overlay (enhanced) for A3000.....**£395.00**

Chroma 340 Genlock and overlay (enhanced) for B, B+ and Master.....**£395.00**

Chroma 345 Genlock and overlay (enhanced) for Archimedes.....**£395.00**

Video software

Chromatext - Video titling package (supplied free with Chroma-Genlock series).....**£39.95**

!ChangeFSI - Image processing and file conversion software.....**£22.00**

XAT Video Utilities Package - A useful range of RISC-OS compatible video utilities.....**£79.00**

Hawk V9 Real Time Colour Digitiser

The best selling fully RISC-OS desktop-compatible colour digitiser. Captures single frames from video camera or recorder. "Live" digitised image on desktop acts as a view finder. Powerful image-enhancing software produces high quality full colour sprites that are easily dragged into other applications such as DTP and Art Packages.

Hawk V9 for the Archimedes.....**£339.00**

Hawk V9 for the A3000 (including Wild Vision A3000 Expansion Box).....**£399.00**

Hawk V10 and V12 frame stores

These capture, store and display video images in real time.

They convert the Archimedes into a highly efficient image processing and analysis system, with better performance than comparable and considerably more expensive systems based on other computers.

Hawk V10, 4 frames each 256 x 256 by 256 grey levels.....**£795.00**

Hawk V12, 4 frames each 512 x 512 by 256 grey levels and 4 binary overlay planes for each frame.....**£1990.00**

The comprehensive Foster Findlay image processing and analysis software is available for the Hawk V10 and V12. This includes Arclmage, a desktop controlled package, and C_Images - a library of image processing routines in C. Full details upon request.

ADC1208 high speed analogue to digital converter

Convert analogue signals to digital format so that data can be stored and processed by the Archimedes. Sampling rate up to 166000 per second, 12 bit resolution, 8 input channels and digital I/O port.

ADC1208 Analogue to digital converter.....**£495.00**

ADC1208 Software utilities module.....**£50.00**

Please contact us for further information, full descriptive data sheets on all these and other products and detailed price list.

Products available from Wild Vision or good Acorn Dealers.

VAT @ 15% and delivery charges excluded from above prices. Delivery charges in UK are £5 per unit for all expansion cards and £2 per unit for all software.

SWEET INSPIRATION?

Of all the Archimedes products beset by problems, *Inspiration* has had more than its fair share. Its development was announced over two years ago, previews were given over a year ago, it was advertised as being available at the beginning of last year and in the latter part of 1990, it finally went on sale.

Although *Inspiration* will run on any Archimedes with 1Mb of Ram, you really need 2Mb-plus to make full use of all its facilities, and the Risc OS environment. You need an Acorn Midi interface (version 3.14 or later) or fully-compatible such as Pandora's own PM14. The latter has four Midi Outs which *Inspiration* can address individually, thereby giving access to four x 16 or 64 separate Midi channels.

Inspiration uses large windows, and in use you will generally need three or more active at the same time, so the higher the screen resolution, the easier the program will be to work with. Mode 16 is the most productive with a normal monitor and several alternate modes are supplied on disc for multisync users.

On activating *Inspiration*, the first window to appear is the control panel, which contains tape recorder controls (play, record, fast forward, and so on) for moving through the music. There are Cue, Start and End indicators for marking positions in the music, a Position counter for telling you exactly where you are, and a SMPTE Time counter which provides timing information for professional use.

There may be a certain logic to it all, but a peculiar situation exists with regard to windows. Depending on where you click and with which button, you may do

Here at last – but not without its problems!

!Inspiration was intended to turn the interest of musicians towards the Archimedes. It was to be the first professional Midi sequencer for the world's fastest micro. How good is it? ALAN WADE reports

nothing, produce a window, a submenu or alter a value. It certainly doesn't make for fast familiarisation and I wonder if more standardisation might have been possible.

Before recording, you must open the Reel Editor window. This is one of the big windows and is in two parts: on the left is the Track List and on the right is the Bar Editor. Unlock both sections so the Track List will stay on the screen even when you move the Bar Editor.

The Track List contains 11 columns for selecting options such as Play, Record, Solo and Loop. Tracks can be delayed, transposed, given a velocity offset (effectively making it louder or quieter) and assigned a Midi program change number, which will be transmitted prior to play.

The Track List can hold 256 Tracks, which is more than you'll ever need, but having many tracks is useful for holding alternative music lines.

The basic recording procedure is to select a track for recording in the Track List and click on Record in the control panel. The Midi menu lets you set up filter options to remove unwanted data from the recording, playback and Thru functions. Midi Thru sends data arriving at the Midi In socket back through the Midi Out so you can hear what you're playing on another instrument.

The Bar Editor displays the music in blocks, each representing a bar of music. The blocks may contain different colours depending on the type of data present in the bars. A Ruler above the display numbers the bars and the Cue points set in the control panel appear here.

Above the Ruler, another field is used

The Electronic Font Foundry has a selection of over 200 high quality fonts to choose from; most of them fully PostScript® compatible. They can be used with any program which makes use of the Outline Font Manager.

We also sell DTP hardware and software and provide hotline technical support.

We can supply printers ideal for DTP: Canon BJ-10e and BJ-130e ink jet printers with a resolution of 360 dpi, and the Cannon 600dpi laser printer.

We also have available 45Mb removable hard drives (with the speed and capacity of hard discs but with the convenience of floppies), A3000 Learning Curve pack, Archimedes 440s and the new A540.

For a free 28pp font catalogue:

A3000 Memory 1MB £55 - 4MB £175

As the cost of memory comes down, so do our prices! Make better use of your A3000 with our easy-to-fit, plug-in, 2 or 4 MByte RAM upgrades. We use high quality sockets so the RAM card can be user upgraded at a later date from 2 to 4 MBytes by simple replacement of the eight chips. In using as few chips as possible in the design, and incorporating the latest low power devices, the load on your computer is kept to a minimum, unlike other expansions which can cause overheating. Full fitting instructions included.

| | | |

for flagging Cue Points which are used to label sections of the music. Here the Cues appear fully written out and as you enter them they are added to the Cue Point window. The Cues can either be global or refer to individual tracks.

Clicking on a track with the Menu button produces a Track menu which includes save options and track information. You can Demix a track by channel, note or controller. Demixing by channel, for example, will split the track into separate tracks each containing data on just one Midi channel.

Each Track has its own Track Editor window, selected from the Reel Editor. These contain several sections, each displaying a different type of data. At the top is a Position Indicator which lists events by type and position. It shows notes, their names, velocities, Midi channel numbers and durations. Events cannot be edited here, however.

Below the Position Indicator is the Grid Editor in which notes are shown as bars on a grid. This is a quite a common method of note representation in sequencers and is helpful if you can't read music. Below this are four graphic editors which show mod wheel, pitch wheel, aftertouch and controller data in graphic form. Below these is a Patch editor for entering program change instructions.

As you may have realised, it's impossible for all these sections to appear on screen at once – but you can select the order in which they appear.

Notes can be selected for editing by rubber banding or by bar. They can be dragged to new positions and a Snap value ensures they fit into exact divisions of the beat. You can draw notes onto the grid, delete them and alter their duration. This is how music is entered in step-time, too.

The graphic editors let you draw and edit data with the mouse so you can create data even if your musical equipment can't generate it.

Although editing is quite thorough, there are so many combinations and variations of buttons to press that anything but the simplest editing functions require a feat of memory.

It was at this point in my exploration of the program that I began to realise something was definitely not quite right. The program had already flagged several errors and while in the Track Editor it flagged several more – some which caused the machine to lock up or crash.

Most of the fatal errors were related to memory access problems, although there were some stack errors, too. As I was using a 4Mb machine, this really should not have been a problem.

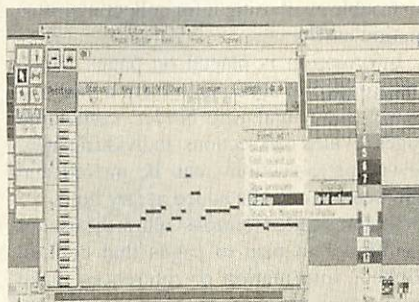

As I explored the other areas of the program, more bugs surfaced. Pandora

seems aware of most of them and, I believe, is working to correct them (the current version is 1.12), but I really think more time should have been spent debugging the program before releasing it.

However, once (or if) the bugs are removed, *!Inspiration* will have a lot of interesting features to offer the aspiring Archimedes musician. The Toolbox, for example, contains a set of seven tools for manipulating and directly altering Midi data: Compressor, Quantise, Change, Invert, Scaling, Timestretch and Delete.

The Compressor acts like a studio compressor and 'evens out' data which may

fluctuate over a wide range. Quantise is used to correct poor timing, adjusting the notes so they fall onto a predefined section of the beat.

Change is one of the most powerful tools as it can change one type of data into another and perform logical and mathematical functions on it. Invert will pivot a series of notes around a central point (making high notes low and vice versa) and it can reverse the order of notes in a track, enabling you to play them backwards!

Scaling can be used to create fade ins and outs and to make other smooth changes to data over a period of time. Timestretch fits a section of music into a given time period making it last for a longer or shorter time. Delete offers selective deletion of events.

As well as being incredibly powerful edit functions, these tools require a correspondingly sophisticated degree of understanding in order to use them effectively.

Another powerful feature is the Sub Group Mixer. This contains eight faders which can be assigned to an output bus

and Midi controller. Moving the fader generates controller data which can be recorded into a track. This could be used with Midi volume control to produce fadeouts or to generate mod wheel, breath control or to sustain pedal data.

The Midi Input and Output Patchbays can remap data on one bus or Midi channel to another. One use for this would be to try music parts with different sounds. Suppose you have several sections of music playing on a zither which happens to be on Midi channel five and you want to hear what they would sound like on a Koto which is on channel 11. Instead of changing all channel five assignments within the program, just remap channel five to channel 11. A nice idea but altering the Patchbays during playback caused the program to lock up.

The final window, Meters, uses pseudo LED meters to indicate Midi activity on the 16 Midi channels.

One of *!Inspiration's* most powerful and useful functions is Undo. Many sequencers have an Undo function which will reverse the last operation but *!Inspiration's* Undo can, theoretically, undo all the way back to the beginning of a session, memory permitting.

Although no demo tunes were supplied with the program, *!Inspiration* can load *Maestro* files (the ability to save files in *Maestro* format has not yet been implemented). *!Inspiration* files are saved in Midi file format which should allow files to be swapped with other programs.

The manual is well produced and sprinkled with wry schoolboy humour. Unfortunately, it's more a list of functions than a tutorial, is rather short on illustrations and lacks an index. However, there is already a technical helpline in operation.

It's very difficult to sum up *!Inspiration*. On one hand it boasts a vast number of powerful and original features – more than we have room to list here – but the multitude of operational procedures, button presses and the variety of ways for selecting menus and edit options does not make for a really accessible front end.

It's difficult, if not impossible, to recommend this program in its present bugged state although, if you've been waiting two years for it you may be prepared to forgive it its indiscretions and accept updates and bug fixes as Pandora releases them (you must telephone the helpline for update news and send a formatted disc and SAE for the update).

!Inspiration costs £299 and is produced by Pandora Technology Ltd., Hitcham Lodge, Taplow, Maidenhead, Berkshire, SL6 0HG. Send a formatted disc (format E) plus SAE to Pandora for a demo disc. Technical hotline, tel: 081-977 9164.

BIRD IN THE HAND

Why would you name a piece of educational software after a common British bird? **DAVE FUTCHER** dons his feathered cap and flies off to investigate further

A magpie is a bird which, apart from being a notorious predator of eggs and nestlings, is also attracted by bright objects. That is why educational software house, Longman Logotron, decided to call its new information package after these collectors of bright and varied bits and pieces in their nests.

What is *Magpie*? It's a totally open-ended application that provides an information environment for Archimedes and BBC A3000 users to use in whatever way they choose.

Not only can you choose what you store, but how each store is actually designed. The software is best described as a hyper-media system, which provides a framework for creating and accessing linked pages of information – rather like Oak Solutions' *Genesis*, or *Bookbinder* from Musbury Consultants.

These packages are both based on the

ideas first developed by *HyperCard* on the Apple Macintosh. Unlike some of these packages, *Magpie* is very simple to use, but is no less powerful.

The author, Peter Cole, and Longman Logotron have developed a true Risc OS package that takes the fullest advantage of the Wimp environment. Users should have no trouble at all using it for collecting information easily.

Information is placed on pages which are grouped in sections to form a binder – rather like a real ring binder, containing pages divided into sections. Individual pages, or complete sections, can be moved and new sections can be added at any time.

Features called 'buttons' allow the user of the binder to turn to pages that contain 'linked' information or references. Like 'real' pages, *Magpie* pages can contain text, lines, boxes, pictures, and drawings, but they may also contain sound samples and music. The text can be displayed in a range of styles – fonts, sizes and colours.

The Archimedes outline fonts are supported, as is the computer's system font, and graphics in the form of drawfiles or sprite files can also be displayed.

Music files can be created with the *!Maestro* music editor or with *!Armadeus*, the Armadillo A448 sound sampler or the *Magpie* tape recorder. Whatever has been collected into *Magpie* can then be presented on screen for viewing.

In addition, as *Magpie* supports the Archimedes outline fonts and makes full use of the Risc OS printer drivers, pages can be printed for use as worksheets, pamphlets and even magazines.

Potential uses

To anyone involved in education and training the potential of *Magpie* is immediately obvious. It is an ideal tool for children and students to use for presenting work for a project – be it a record of an educational visit, a database about composers, or information about using craft tools.

Completed *Magpie* binders will be ideal resources for children to access. Similarly, binders could be developed by educational publishers as teaching resources.

Longman Logotron has realised the possibilities of the 'electronic book' and the package includes a tiny run-time version called *MagpiRead* which can be included with any files created with the package for free distribution. When you purchase the software you get two applications.

First is *Magpie* itself, an authoring package that gives you the ability to create your own pages and binders and the means to read them.

MagpiRead, then, is a browser that provides only the facilities for reading pages. Authoring your own material with *Magpie* is very simple thanks to the application's intuitive, easily learned, interface.

This means that the package can be used successfully by young and older pupils, and their teachers, as well as more skilled users. The possibilities of creating without hassle seem to have been in the forefront of the author's mind.

Nothing is too complicated, there is no special language to learn – it is just a question of planning the individual pages that make up your binder and then linking them together.

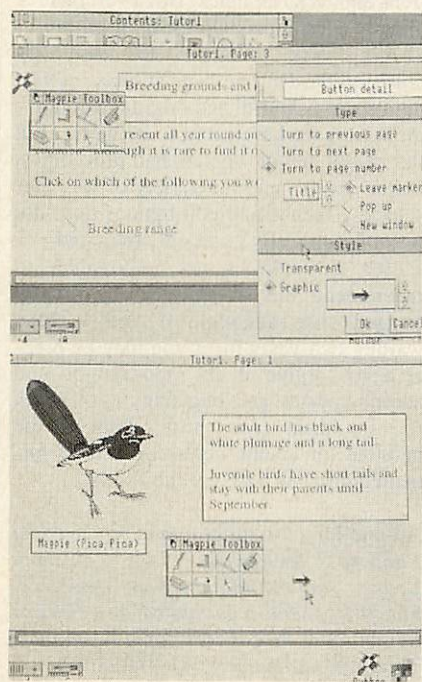

Using Magpie

Creating a new binder could not be simpler – click Menu on the *Magpie* icon on the icon bar and open the submenu New Binder.

This leads to a Save As dialogue, where you type in the name you want to save the binder under, and then drag the icon display of the directory to where you want the binder stored.

Once the binder has been created, it will be opened at its contents page. All binders have a contents page which shows the sections and the pages in those sections.

In *Magpie*, the contents page shows you how you have organised your work and provides the tools for changing this, such as

adding or removing pages or whole sections. With *MagpiRead*, the contents page shows how the work is organised and allows the reader to quickly turn to a section or a page of interest.

The control panel of the contents page allows you to create, edit and delete sections and pages. This includes a special title page that is displayed when the binder is first run.

Before you can add pages to your binder, you must create a section in which they can appear.

On your first page, *Magpie*'s toolbox appears, providing all the tools needed for manipulating items placed on the page. By clicking the appropriate icon you can add text, draw lines, place frames and add arrows and buttons for turning pages.

There are also icons for moving, re-sizing, and changing items which are on top of each other. Text is written on the page using the Pen icon with the proviso that this is always done within a frame.

The text can be written in any number of styles and colours depending on the number of fonts available.

It is also possible to use text created with *!Edit*, and in true Risc OS style loading into a *Magpie* frame is done by dragging the file into the frame to be used. Certain Risc OS datafiles are understood by *Magpie* and these too can be dragged and pasted into place.

This means that files created with *!Draw* and *!Paint*, or any program that will also output in these standard formats, can be used as illustrations within a *Magpie* application. Digitised pictures are suitable, as are charts and graphs created with *Presenter*.

It is the possibility of adding sound and music that makes *Magpie* rather special. It has its own built-in 'tape recorder' for simple sound sampling linked with a microphone and either the Clares' *Armadeus* sound sampling card or the Armadillo A448 card. With either of these it is possible to create short sections of digitised speech. As well as speech or sound effects, music created with *!Maestro* can be placed on the page ready to be played.

The linking together of pages within a hypermedia system is crucial, and *Magpie* has a range of buttons for this task. The toolbox comes into play and the Button tool is used to create and edit buttons for changing pages and altering the behaviour of items on the page.

As well as button shapes or arrows being defined to turn to the next or previous page, in sequence or to a particular page, buttons can be objects, such as a picture. These can be further set to hide and reveal the object that is hidden until some action is taken by the users – normally clicking the mouse over the item.

It is no use having loads of information stored away in a system like this if you can

only access it by looking through the pages. So *Magpie* provides the ability to search for text in the text areas on the pages in a binder.

If the Search icon is chosen from the control panel of the contents page, all the pages in a binder will be searched. But, to search the binder from a certain page onwards, choose the Search option from the page menu.

When a page has been found which contains matching text it will be opened and the Search dialogue will be re-displayed. Choosing NEXT results in the next page containing matching text being looked for.

Unlike some other Archimedes hypermedia applications, *Magpie* uses sophisticated data compression techniques which enable it to hold text and graphics in a fraction of the space required by uncompressed files. This means binders can be considerably longer and more complex too.

Conclusion

Magpie is an outstanding example of true open-ended software. There is no such thing as a typical *Magpie* application – it is an effective tool for a wide range of uses.

It is certainly an excellent presentation system which can link slides of text and graphics together, with the added advantage that it is tree-like in structure and more information on particular topics can be shown if and when necessary.

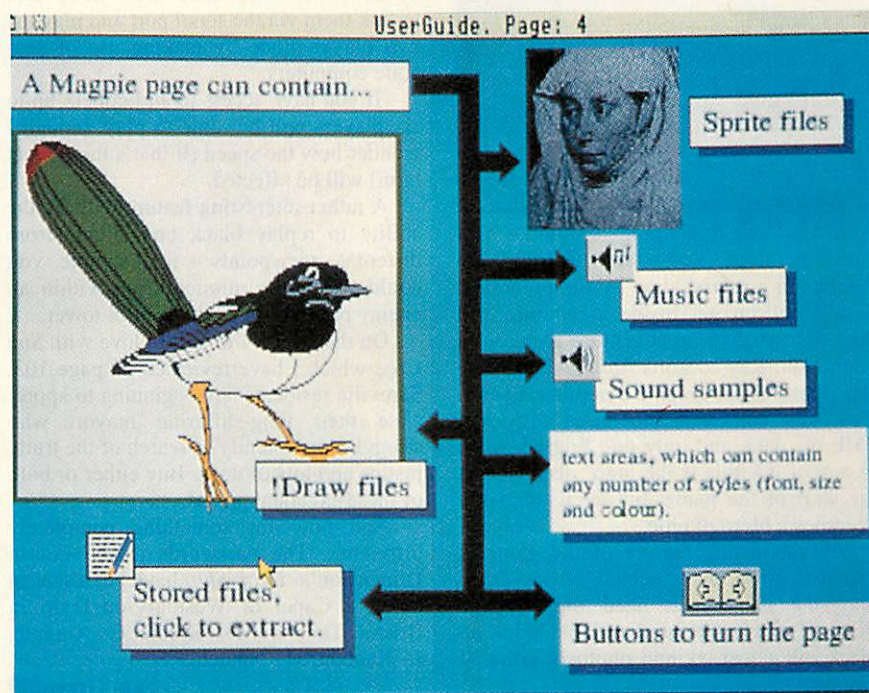

Magpie is ideal for use as a store for free-form information which could not be contained in a traditional database. Charts, digitized photos, pictures and words can be placed alongside each other in whatever way suits you. Many people will of course

use it for holding simple reference material about their hobby or interest.

Others will turn to *Magpie* for storing more traditional files such as notes, address lists or personal type records.

Whatever information you decide to hold within its pages, *Magpie* provides a consistent and friendly environment in which you can build your own system.

Magpie is published by Longman Logotron, Dales Brewery, Gwydir Street, Cambridge CB1 2LJ. It costs £39 until March 31 and £54 thereafter.

One of those few companies boasting the Archimedes with regard to games has just revealed plans of a mega game which will cause the eyes of your Amiga buff friends to turn green. *Tale of the Anubus* is an Egyptian adventure. It is being written by a group of software writers in Norfolk who have invested much time, effort and money into the project, but who don't yet have a company to market it.

The plot is based around pyramids. One of the authors, Ray Maidstone, has always been interested in ancient Egypt and hieroglyphics. He explains: 'The pyramids acted as a sort of time capsule for the Pharaohs. When they died, the pyramids became their graves, until it was time for them to be reincarnated.'

In the game, looters have entered one of the pyramids and disturbed the 'time machine'. This means the Pharaoh is unable to begin his new life.

GAME SHOW

The authors have a number of games on the go, including four sequels to *Tale of the Anubus* and a 3D space game similar to *Elite*. Availability and price for *Anubus* have not been fixed yet, but expect it in the summer for around £30.

Favourites

Now for a few words on my current two favourite games.

On the Archimedes, *Chocks Away* is still number one in my book, and I'm looking forward to next month when the new missions will be released. If you have access to two machines, you will be able to link them via the serial port and play the two player mode by making use of separate computers.

If you have access to an Econet, up to six players will be able to play, though I wonder how the speed (if that's the correct term) will be affected.

A rather interesting feature will be the ability to replay black box flights from different viewpoints - for example, you could watch the mission from within an enemy plane, or even the control tower.

On the Beeb, I'm still in love with *Sim City*, which I have reviewed on page 103. Samville residents are beginning to appreciate their long-suffering mayor, who struggles persistently in search of the truth, justice and lots of dosh. Buy either or both of these excellent games.

And now for something completely different... The passwords to the Fourth Dimension's *Drop Ship* have been sent in by A J Capel of Westbury-on-Trym in Bristol. They are: D - Dahlia, G - Gagggle, J - Kaunda, M - Nautch.

Sam Greenhill

Iron Lord

Cygnus Soft. Tel: (0533) 559711
Archimedes, £19.95

Apart from the *Magnetic Scrolls* conversions, adventure games have been a bit thin on the ground for the Archimedes. This seems set to change with the arrival of *Iron Lord*.

You play the part of the Prince, son of King Tibor, who has been killed by his brother. You must avenge your father by raising an army to defeat the evil forces. By travelling around the kingdom, it's possible to enlist the help of the peasants by winning their trust through prowess in various competitions, such as archery and arm-wrestling. Alternatively, you can undertake quests for characters you meet along the way.

The layout of the game is very similar to the Cinemaware series found on the Atari ST and Commodore Amiga. A graphical map depicts the kingdom, and moving around it is just a case of pointing your horse in the right direction. During transit, a tiny horse runs between locations on the map itself and is also depicted in a little pop-up window as an animated film. Various pieces of medieval music play throughout the game with authentic lutes, mandolins and flugle-horns adding to the atmosphere.

Once your destination has been reached, the view changes accordingly, with an overhead plan-view to the right. You can guide your character around the map, looking in on any interesting buildings.

Every so often, other characters appear in the game. You can, at this point, converse in a limited way by selecting phrases

A bit annoying that, but never mind - you can save him! You start *Tale of the Anubus* in a tourist shop by the pyramids. Somehow you get inside a pyramid and then it's just like an adventure game with animation. Ray reckons *Anubus* is a 'very intelligent visual graphic computer game'. The game comes on four discs with over 7Mb of data, and only one English word in any of it - this is the logo displayed at the start of the game, but even this soon becomes a hieroglyphic.

An interesting feature of the game is that it is not copy protected. However, to play the game you need the 92-page manual, which is printed with black ink on black ink - just try and photocopy that if you can!

Iron Lord: a step in the right direction for Archimedes games

from a pre-defined list. It's a shame there is no parser. Objects can be exchanged if they (and money) are available, and they can be used elsewhere in the quest.

The penultimate task is to gather an army to fight your uncle – far beyond the skills of a humble reviewer. The instructions do describe the battle phase as a graphically-controlled war game in which you must control your troops in a strategic and cunning manner.

To round off the game, a jaunt through your uncle's labyrinth to defeat his evil forces must be undertaken. This takes the form of an overhead view of the maze, in a sort of 'gauntlet-style'.

Graphics throughout the game are excellent, even though they're a port from the ST version. The sound adds even more to the medieval setting. Although it's not exactly everybody's cup of tea, *Iron Lord* is a step in the right direction for the Archimedes game library. The combination of adventure, strategy and arcade, gives it that essential long term appeal.

Rob Miller

Tactic

Eterna. Tel: 010-33 6770539

Archimedes, £19.95

Tactic, from Eterna (until recently Systeme) follows in the footsteps of its last great game, *Ballarena*, in that it's an old idea given a fresh, colourful new face. In this case it's the *Tetris* clones that the 3FR team has given the treatment to. Multi-coloured balls are dropped in from the top of the screen and it's your job to guide them left or right into columns to make up combis. A combi is a combination of balls of the same colour and there are several

types from vertical lines of three balls to the fiendishly difficult diagonal line.

To complete a level you must follow the contract on the bottom of the screen. The first contract requires you to make four combis of three ball vertical lines, but from then on the contracts get very demanding. All this is difficult enough without a time limit, but there is one, making *Tactic* a very challenging game. Just try completing a contract of four squares and three diagonal lines in under a minute (and that's only level three!). You've also got to keep an eye out for the bonuses that float around the screen. Some are good, like the next level square, but some are bad. Hit an invisible square and it's game over for you, unless you have a photographic memory!

I have to mention the music – it's the best! Pumped through my stereo at full volume it is far better than some of the rubbish in the music charts these days! The graphics niceties are far too numerous to mention here, but I particularly like the way you can enter your name by rotating the characters around a sphere. This would be a great game if it wasn't so difficult!

Paul James

Iron Lord: welcome brave knight

Arc Pinball

Shibumi Soft. Tel: (0392) 437756

Arc/A3000, £24.95. BBC, £11.95

Arc Pinball is the first games offering to come from Shibumi Soft and it's available for the A3000, Archimedes and BBC/Master machines.

As an original pinball hack, I search for the best games and spend more money than I have on the flashing wonders. So, my first concern is: does *Arc Pinball* compare to the real thing?

If you want a straight answer, yes, astoundingly so. The ball rattles along the chutes, bounces off the bumpers at realistic angles and can at times reach some speed. Flipper control is amazing and I found that many of my poolhall tricks could be replicated, such as stopping the ball dead at full wack.

I cried with joy when I found it had two keys to tilt the table. It does this so well that I can roll the ball back up the slope that leads to the hole!

The main aim of this game is to score points. Knocking down bumpers in a certain combination gives you extras like free balls, big points and a no entry sign over the hole. Lighting the blue pads across the board opens a door and you can shoot the ball up to the bonus table.

I was initially quite disappointed at the lack of a screen designer but, after playing the game for a while, I've come to the conclusion that *Arc Pinball* is my current definition of plain and simple fun.

Paul James

DAVE FUTCHER counts on a simple maths package for younger children

FARM NUMBERS

As more and more BBC A3000s find their way into schools, and parents purchase The Learning Curve for educational support at home, more educational software will be released. Already it is growing. *Farmer Giles* is a collection of four programs intended to support early mathematics work in numbers and money.

According to the opening screen it looks as if the program has been particularly designed to support Mathematics in the National Curriculum. It says that the program's use will support attainment targets 3 and 8, which cover Numbers and Measures.

Despite the package's name there are actually two groups of programs based around the popular farming and shopping themes that all young children seem to love.

In the *Farmer Giles* program, the child has to answer the question about how many cows there are in two of Farmer Giles' fields. The graphics are realistic, with cows placed in grassy fields with gates and fences. There are hedges, trees and a ploughed field making up the background scene. Instead of merely typing in numbers, the answer is entered by clicking one of the large numbers that are displayed at the bottom of the screen.

It then appears in the answer box. If right a little tune is played and if wrong another, less tuneful, sound is heard. If the child fails to get the answer right after two attempts the correct answer is given. The second part of the package is made up of three related pro-

grams based around a shopping trip. Two of these are called *How much is?* and are based around the cost of items in a shop and concern the skill of addition. The first involves a single item and the second up to four items. The third money program is called *How much change?* and this is the only program in the pack where subtraction is directly involved.

The shopping programs are based around two different scenarios – a sweet shop and a toy shop. The *How much is?* games are played in a sweet shop with a range of sweets like sherbert, lollies, toffees, chewing gum, sticks of rock, apples and crisps for sale. The program asks the cost of items and the child answers by clicking the large coins displayed at the bottom of the screen, making up the correct amount by clicking several coins if necessary.

How much change? takes place in a toy shop with individual items like a teddy bear, a train, doll, paints, jeep, building blocks, jigsaw, notepad, pencil and rubber for sale.

The child using the program has to work out the correct change after considering the price of the item and the amount of money tendered. A till display appears at the top right-hand corner of the screen and an item like a teddy appears next to it with its price marked. Under this colourful display a message tells the child the amount you have given the shopkeeper, such as £1.50, and asks what change should be received. As in the

How much is? programs the answers are given by clicking the coins displayed along the bottom of the screen.

Despite truly colourful scenes and excellent sprites that make for realistic farm sequences and shopping trips, *Farmer Giles* is a pure and simple old fashioned 'drill and practice' program. It has been done well but all the programmer has effectively done is to 'dress up' basic number and money practice. The BBC A3000's graphics potential has been put to good use.

It is my view that, in reality, practice programs like this are a waste of any computer's real power. However, if you want your child to practice simple addition and subtraction of numbers and money with your BBC A3000, this program offers that possibility. Whatever you think educationally, children still love programs like this!

Farmer Giles is published by Computer Tutorial, Semarket Hill, Cowes, Isle of Wight, PO31 7TR. It is available for the BBC A3000 and Archimedes and costs £19.95.

The CJE ARM 3 Upgrade + SUPER BOOSTER

The CJE ARM 3 runs at 30MHz, but with our optional ARM 3 Super Booster it will allow you to run your CJE ARM 3 at higher speeds.

For example 33, 34, 35, 36 MHz may be possible

(This upgrade is only suitable for the Archimedes 300/400 series fitted with MEMC1A)

42M Archimedes Removable Drives – £585

If you are looking for a hard drive for your Archimedes or A3000, why not consider using a MicroNet MR45 removable SCSI hard drive ?...

- **Fast** – The average access time is 25 milliseconds, so these are FAST devices. When used with an Oak SCSI card, the file transfer rate is the same as a conventional fixed hard disc.
- **Reliable** – The technology of these drives has been proven by use in huge quantities with Apple Macintosh computers.
- **Robust** – The discs, when not in the drive, are extremely robust. We (deliberately!) threw one half-way across the office, it hit a desk and knocked a phone on the floor! We then verified the disc and found that it did not have a single error on it!
- **Flexible** – The medium is removable, so you can use different discs for different uses.
- **Secure** – The medium is removable, so you can take out the disc and lock it up in a safe place.
- **Cheap** – The price of the drive, including a single 42M disc, is just £585 (£680 including VAT and carriage). Extra 42M discs are £80 each (including VAT & carriage).

N.B. These are special prices for Archive Magazine subscribers only (ring for details) but it's worth paying £17 to join Archive just to buy one of these drives!

LISP

EdScheme *A modern Lisp for the PC, Atari ST and Archimedes*

For years, programming languages such as Lisp have been the preserve of the research scientist. The Scheme dialect of Lisp is one of the most powerful products to emerge from the artificial intelligence community, yet unlike its predecessors it has proved accessible to student and hobbyist.

EdScheme is an incremental compiler for Scheme programs, providing the efficiency of a compiler with the convenience of an interpreter. In addition EdScheme has an integrated and dedicated Lisp editor and a comprehensive turtle graphics interface making it the perfect tool for exploring the science of computers.

Runs on all Archimedes systems. Only £37.50 inclusive of VAT and P & P

EdScheme is available only from LAMBDA PUBLICATIONS
194 Cheney Manor Road, The Green, Swindon SN2 2NZ

SMOOTH PRESENTATION

The Arc is finding wider use in conference presentations. **PAUL JAMES** visits one company which has perfected the art of the slide show

Have you ever had to endure a post-holiday slide show – you know the one, where the whole family grudgingly gets together while auntie exudes about how wonderful the Isle of Wight was in August? Four hundred slides later you seriously wonder about auntie's presentation skills.

Some companies take a similar approach to conference presentations. When a large company calls a meeting of its executives, it needs to put information across to a captive audience. It is important that all the information is presented in a stylish, informative and interesting way. The show also needs to run smoothly – there is no advantage in projecting a slide showing increasing profits the wrong way up in front of prospective investors!

Nowadays, computers are used to manage presentations and conferences, controlling sophisticated projectors, providing many special effects, and of course, enabling computer generated 'slides' to be projected directly onto a large screen.

One company at the forefront of computerised presentations using the Archimedes is Cadsoft. Based in Aylesford, the company's products are geared towards electronic presentation and revolve around *Maestro Presenter* software.

The powerful hardware nerve centre, called Show Master, comprises: an Archimedes 410 with 4Mb of memory and an Arm 3 upgrade; a 210Mb hard disc drive; a 44Mb removable hard disc; numerous inputs and outputs for add-ons, such as a

slide maker and printer; and a 16.7 million colour video board.

Since 1986 the company, run by Michael Flannigan, has been establishing a reputable role in the electronic presentation business.

Michael writes all the software for the machine and, while he doesn't make a big song and dance about an Arc being used, when asked why he doesn't use a more widely known computer, his reply is 'because the Archimedes is better'. He also listens to customers, adding improvements and adjusting the software according to advice.

Not that the Show Master set up isn't very capable already. The video card (Millipede's Prisma 3 graphics board) can hold four very hi-resolution true 256 colour screens – each screen is independent and can be superimposed over the others, allowing special effects like pan, fade and scroll. These are used in conjunction with the software to provide smooth and interesting transitions between 'slides', keeping even the least interested spectator awake. It can manage 44 frames of video animation, known as a 'sting' in the trade.

Before each show, the slides are drawn up and stored on the hard disc. Further storage is provided by the removable hard disc drive. The software allows the user to program the sequence beforehand – for instance, the first few can fade in the company logo, play a jingle and drop in the name of the first speaker.

Each one of these steps has a transitional stage, which could be an amount of time or a keypress, and the type of transition is programmed, whether it be a fade, a cut or a smooth glide onto the screen.

While the screen shows the end product, the person controlling the system can edit the show in real time on a personal monitor, with picons (small pictures) indicating what is coming up.

The screens are created by a mixture of video digitising and caption generation. As well as using Monotype outline fonts, the caption generating software also includes drawing facilities, provided by the Risc OS *!Draw* module. A screen can even include a live image taken with a video camera on the spot. There are also extensive facilities for creating graphs, and data entered in

spreadsheet style can be output to a large variety of graph and chart styles to make yet more interesting slides.

At the end of the show, slides can be printed out to a colour printer, or made into standard transparencies so that clients can take them away.

The Show Master has established a reputation for being flexible. It has seen action at a recent Asda/Gateway/Next fashion event and is also used to create links for *Financial Times* television. A system was also taken to Phoenix, Arizona for a major presentation by the Vickers group. Most recently, a system was taken to Japan by a well known pharmaceutical company, only six weeks after it was purchased – indicating the confidence the company had in the

Arc-based system, with its user-friendly software and extensive facilities.

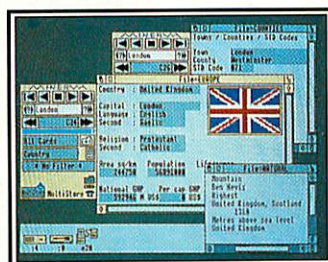

Auntie might not be quite in that league yet, but I'm sure she would be impressed...

Further details from Cadsoft Graphics Systems Ltd, Upper Wield, Aylesford, Hants.

MINERVA

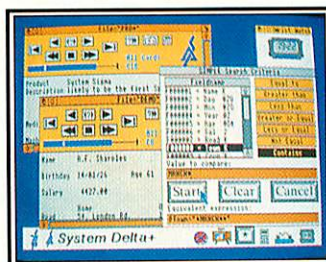

BUSINESS EDUCATION
OR HOME DATABASES

MULTISTORE The ultimate in database technology. A powerful database for the business or serious home user. MultiStore is a multi-tasking relational database which allows many database files to be opened at one time. Files may be linked so that relationships between files are automatically tracked. Rapid searches by any criteria, including 'sounds like' facility. Key fields for instant search, indices to allow file browsing in more than one order without sorting. Fast sort facility by single field or complex expression. Comprehensive reporting facilities allow any report, including totalled lists of fields, labels with multi-font capability, line trapping, justification, paging, multi-set stationery and even completely relational reports. Data can easily be exported to other RISC OS packages. MultiStore is a professional package and probably the most comprehensive database available today. **£299.00 INC V.A.T.**

FLEXIFILE The perfect database for education and small business users. FlexiFile is a new powerful multi-tasking database with friendly screen displays. Multiple files may be open at the same time with relational linking between any two files. FlexiFile allows fast sorts to be carried out and with its soundex searching allows even mis-spelt items to be found. Mathematics can be performed using the macros while indices allow you to browse the records in more than one order without performing sorts. FlexiFile lives up to its name giving the user full flexibility with ease of use. **£149.95 INC V.A.T.**

SYSTEM DELTAPLUS The database for the serious home user or enthusiast. System DeltaPlus is a comprehensive database giving you power coupled with ease of use. Easy to use video style controls and the ability to define your own card layouts make this database suitable for all types of data entry. Searches can be performed by simply selecting from within windows or by multiple criteria. Reports can be produced together with labels up to four across with blank line strip. With comprehensive maths, sorts and searches System DeltaPlus is hard to beat. System DeltaPlus may be programmed if required allowing you to customise the package or write your own applications. **£79.95 INC V.A.T.**

GRAPHBOX * Data can be imported from the Minerva range of databases to GraphBox and stunning charts produced.

With twenty different charts and graphs you will always be able to present your data to its best. GraphBox also imports data from other RISC OS packages. With a 'Hot Link' to Pipedream 3 which allows for automatic updating of graphs from data produced and the ability to export charts as draw files. Graph Box is the answer you have been looking for.

* Graphbox is not a database, but can be used with any of the above programs for reproduction of charts and graphs.

£79.95 INC V.A.T.
